

Steps to Healthier Homes

KEEP IT CLEAN

-  Start with People
-  House as a System
-  Keep It:
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  Making it Work

LEARNING OBJECTIVES

List three contaminants or allergens that are frequently found in house dust and their health effects.

Describe three ways allergens or contaminants get into house dust.

Identify three strategies to reduce them.

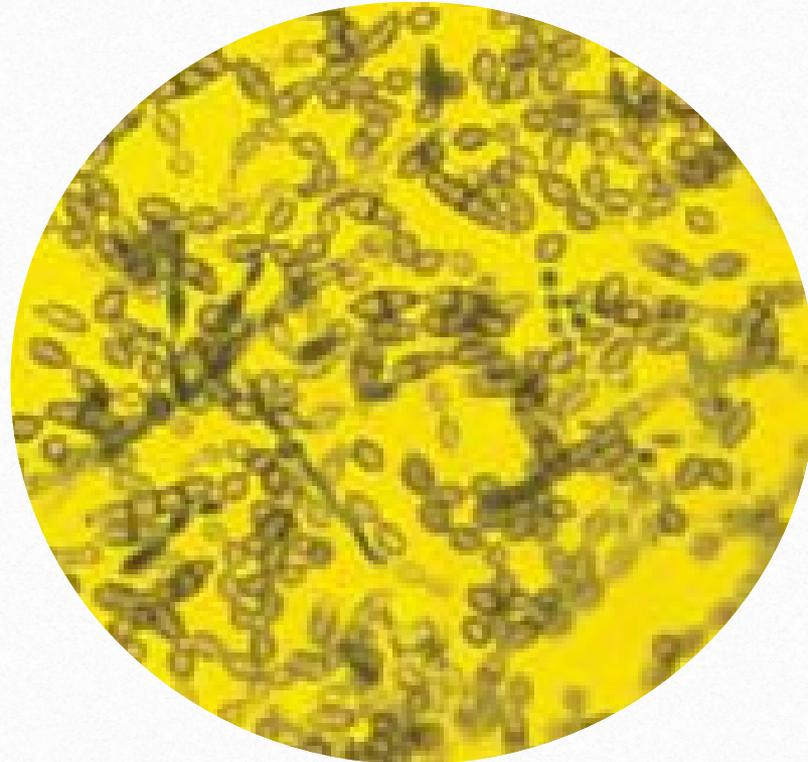

WHY IS CLEAN AND EASILY CLEANABLE IMPORTANT?

- Reduce exposure to:
 - ◆ Chemical contaminants
 - ◆ Allergens
 - ◆ Pest droppings and urine
 - ◆ Pesticides
 - ◆ Heavy metals such as lead and arsenic
- Reduced harborage for pests

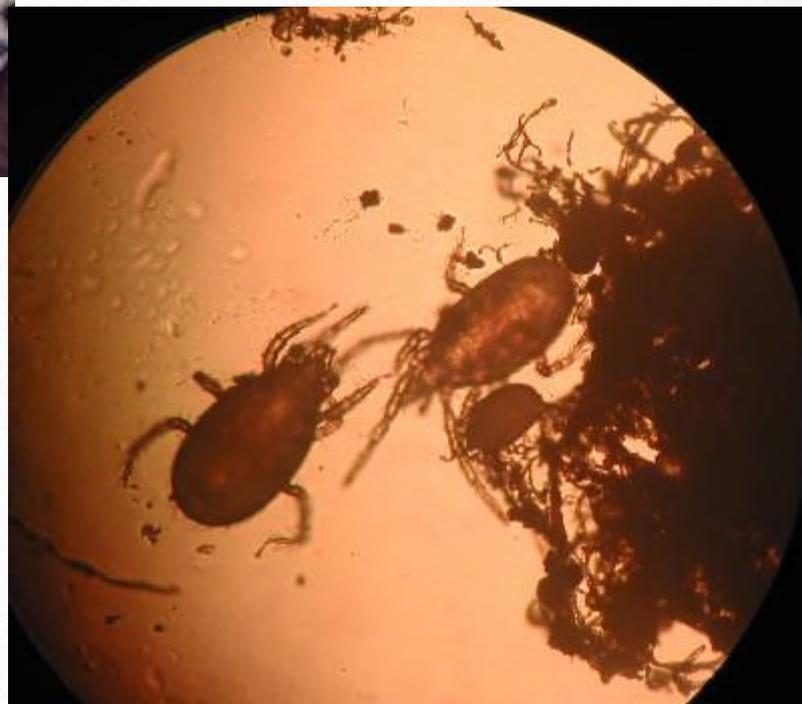

ENVIRONMENTAL ALLERGENS

- Animals
- Dust Mites
- Molds
- Tree Pollen
- Grass Pollen
- Weed Pollen
- Latex
- Foods
- Stinging Insects
- Medications

*Dust mites in humid
and dry buildings*

Dust mite control

- Keep humidity at or below 50%
- Wash bedding
- Use mattress and pillow encasements
- Freeze soft toys and small items
- If possible, replace carpets with hard surfaces, and remove draperies and upholstery

WHERE DOES HOUSE DUST COME FROM?

Brought-In

Home-Grown

- Lead Dust
- Dust Mites

Resident-Made

- Garbage
- Clutter

BROUGHT IN DUST

- Four Steps to Reduce
 - ◆ Hard Surface Walkways
 - ◆ Outside Grate-Like Mat
 - ◆ Inside Carpet Pad
 - ◆ Hard Surface Floor

SHOES OFF – LESS DUST ENTERS

Page
5.3

HEALTHY CLEANING

Page
5.4

Don't dry dust or dry sweep

Vacuuming:

- Low-emission vacuum with beater bar
- Very slowly (or use vacuum with dirt finder)

Wet cleaning:

- Use “elbow grease”
- Frequently change water

MAKE BUILDINGS MORE CLEANABLE

- Dust walk-off systems at entryways
- Dust-creating activities away from people.
- Smooth, cleanable surfaces
- Effective storage space
- Flooring that is easy to clean
- Vacuums with good filtration and easy to use

Keep pets off of beds and out of the bedroom.

CLEANABLE FLOORING

WHAT TO LOOK FOR IN A VACUUM?

Beater Bar

Vacuum Strength

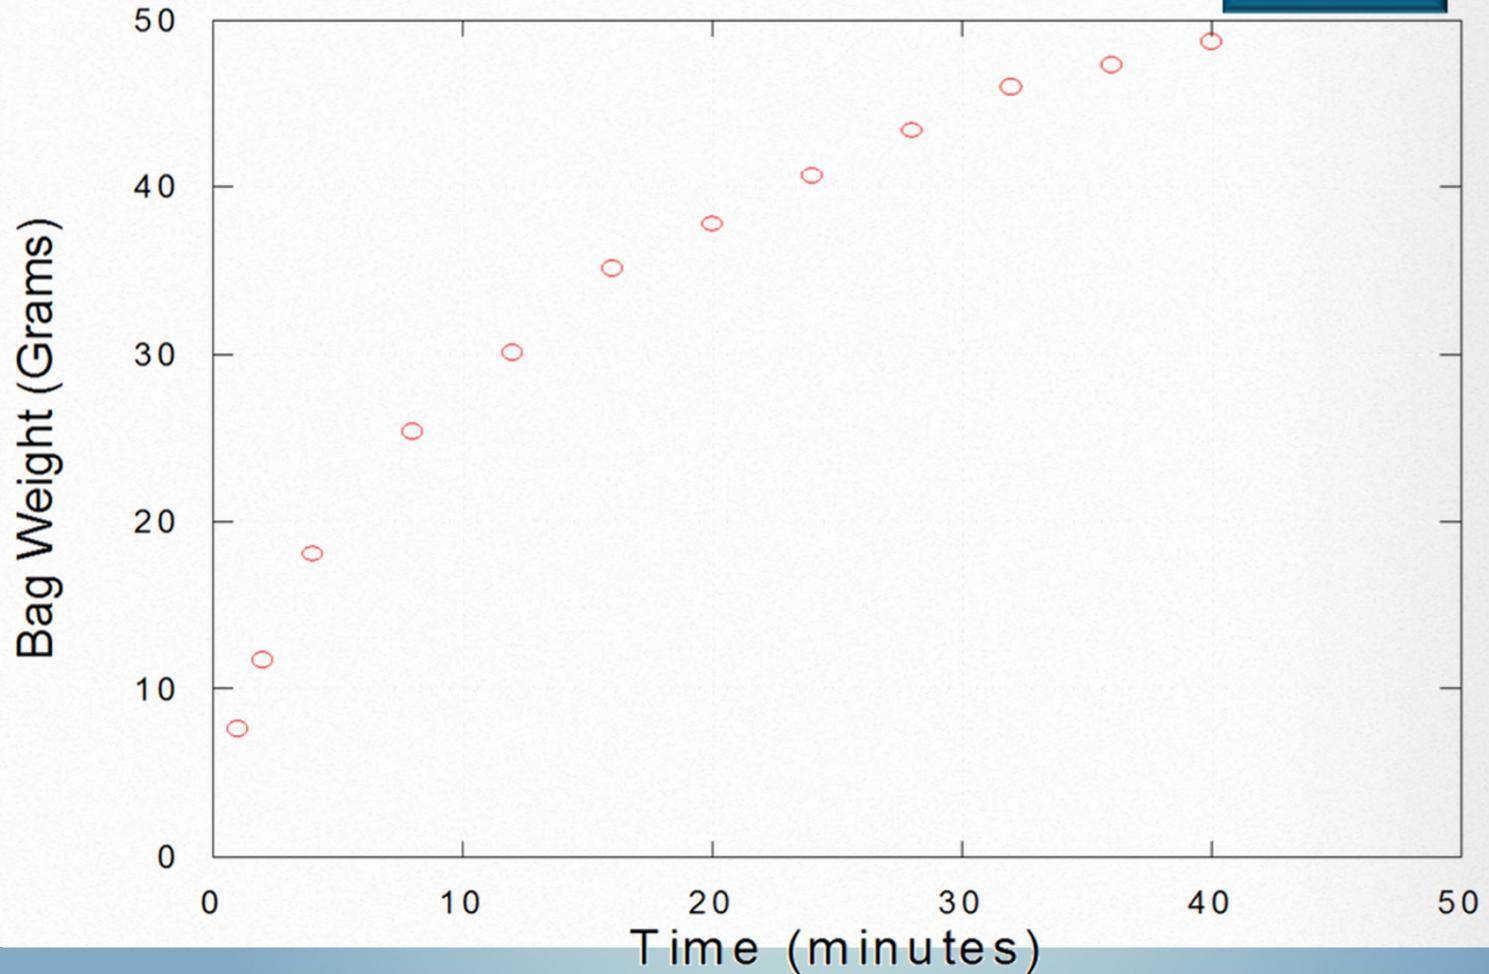

Filter Type

Dirt Sensor

OLDER CARPETS: DIFFICULT TO CLEAN

Vacuum dust curve-kasara

Page

5.6

WIRE SHELVING

HOW CLEAN IS CLEAN?

- Clearance testing for lead
 - ◆ 40 micrograms of lead per square foot on floors
 - ◆ 250 micrograms of lead per square foot on window sills.
- Standards for allergens?
- Standards for dust?

PROBLEMATIC CLEANING METHODS

- Carpet cleaning
- Overuse of anti-microbials
- Sanitizers
- Air fresheners

DUCT CLEANING

EPA recommends duct cleaning when:

- Substantial visible mold
- Ducts infested
- Ducts clogged
- Ducts release particles

CLUTTER

- What's the problem?
- What do we do to help? Organize home, shelves and storage bins.
- Hoarding? What's the psychological aspect of this?

CODE REQUIREMENTS

Code requirements related to cleanliness

305.1

- General

302.1

- Sanitation

307.1

- Accumulation of rubbish or garbage

503.4

- Floor surface

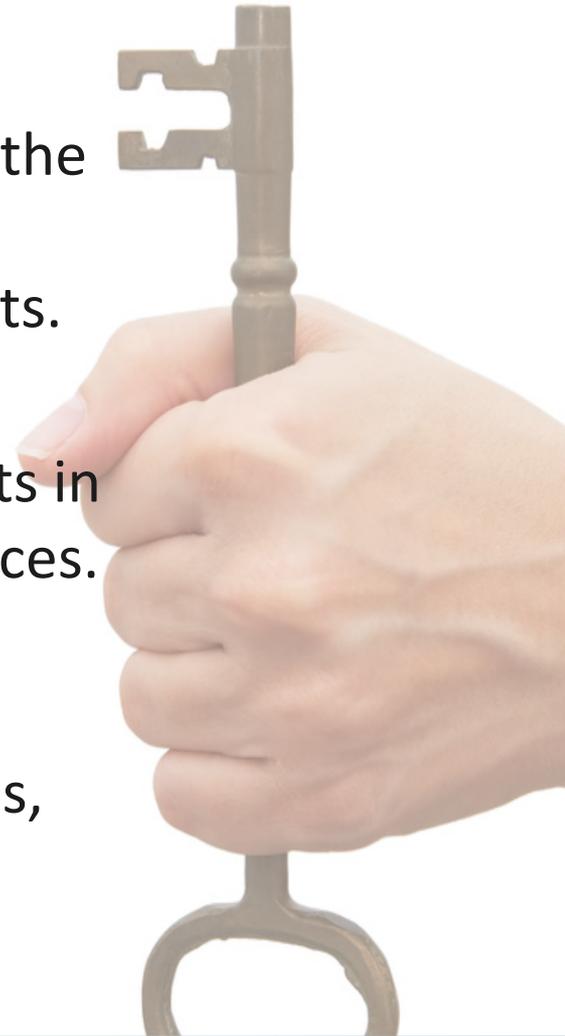

KEY MESSAGES

Pesticides, allergens, and general chemicals in the home can cause allergic reactions, asthma and asthma exacerbation, and toxic exposure effects.

Potential sources of allergens and contaminants in the home come from outdoor and indoor sources.

Keeping a home clean includes controlling the source, creating smooth and cleanable surfaces, reducing clutter, and using effective cleaning methods.

LEARNING OBJECTIVES

List three contaminants or allergens that are frequently found in house dust and their health effects.

Describe three ways allergens or contaminants get into house dust.

Identify three strategies to reduce them.

KEEP IT PEST-FREE

Steps to Healthier Homes

Start with People

House as a System

Keep It:

1. Dry

2. Clean

3. Pest-Free

4. Ventilated

5. Safe

6. Contaminant-Free

7. Maintained

8. Climate Controlled

Making it Work

LEARNING OBJECTIVES

Name three illnesses or injuries associated with pest infestation.

Identify three clues of pest infestation.

Identify the three strategies associated with an IPM approach.

Name two illegal pesticides that may be used in the home.

HEALTH EFFECTS OF PESTS

Asthma

Infectious diseases

Health effects greater on children

HEALTH EFFECTS OF PESTS

- Exposure to Pest Allergens

Pest	Pathway	Allergen
Dust Mite	Feces	Der p 1
Cockroaches	Feces	Bla g 1 & 2
Mice	Urine	MUP

HEALTH EFFECTS OF PESTS

- Bites
- Common Culprits
- Rabies

Mosquito bites

HEALTH EFFECTS OF PESTS

- Rat Bites

Rat bites, multiple

Allergens in cockroach feces

Poop arithmetic 101

1 fecal pellet = ~1 mg

1 mg feces = 500 Units Bla g 1

1 female = 3 mg feces per day

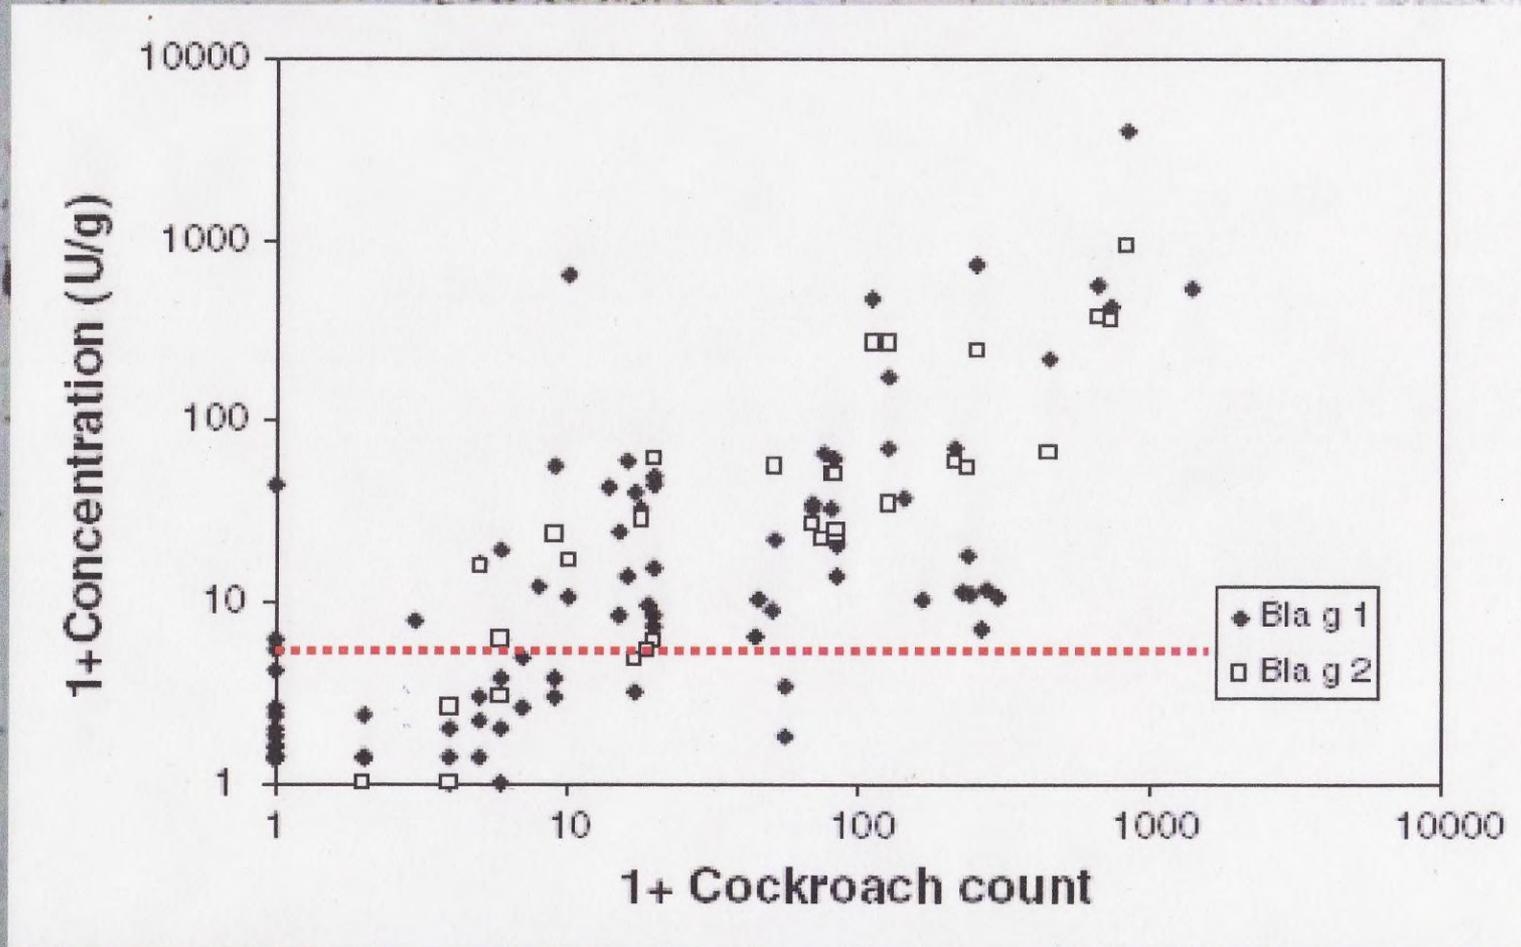

1 day = ~1500 Units Bla g 1

per grm dust

Human sensitization threshold = 2 Units

Morbidity (illness) threshold = 8 Units

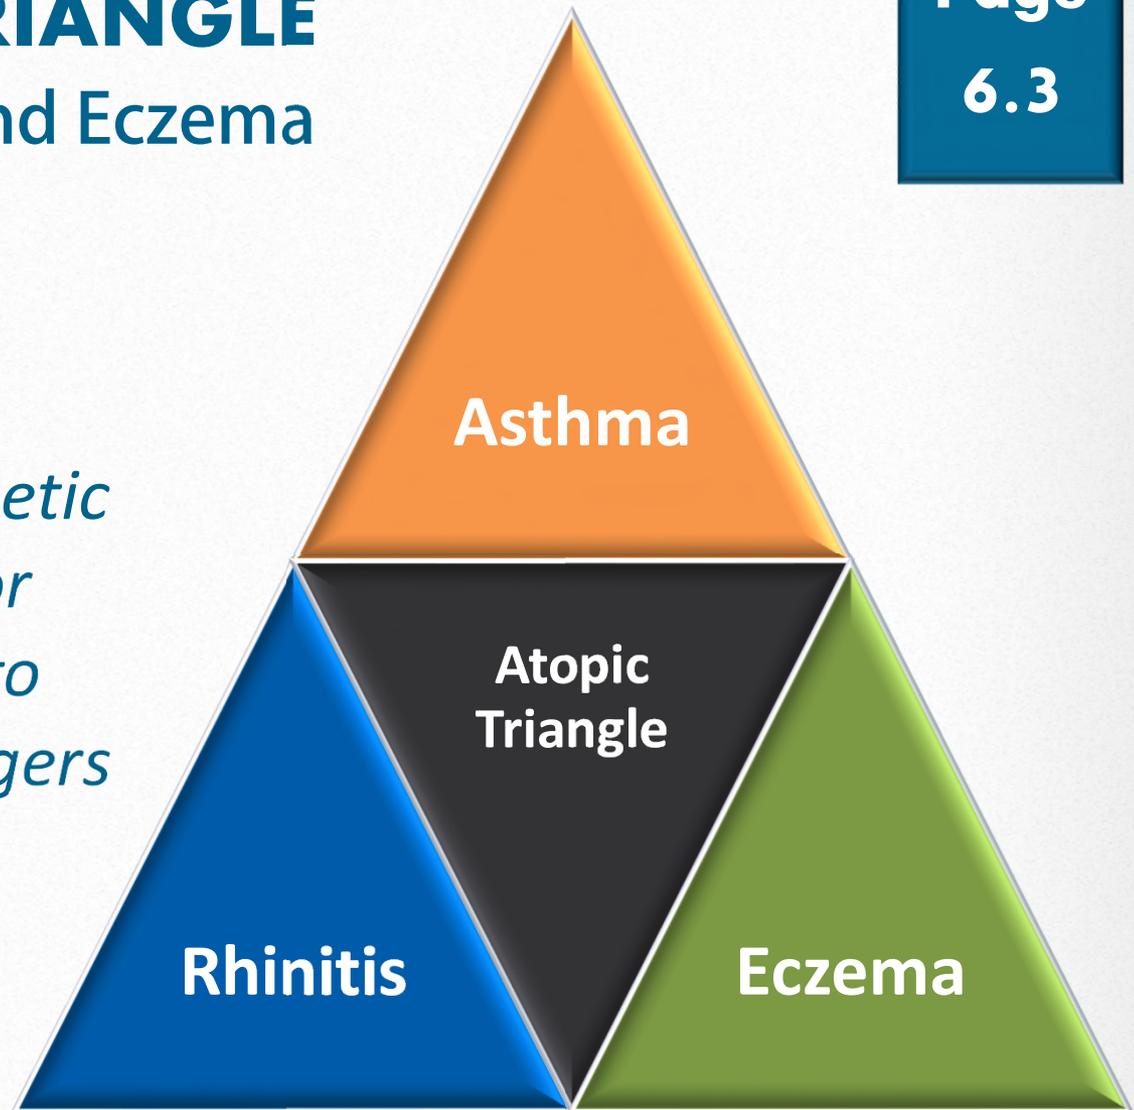

More cockroaches = More allergen

THE ATOPIC TRIANGLE

Asthma, Allergies and Eczema

Atopic:
*pertaining to a genetic
predisposition for
hypersensitivity to
environmental triggers*

Pests

Immunoglobulin E (IgE) producing conditions

Conditions interact/trigger; commonly coexist

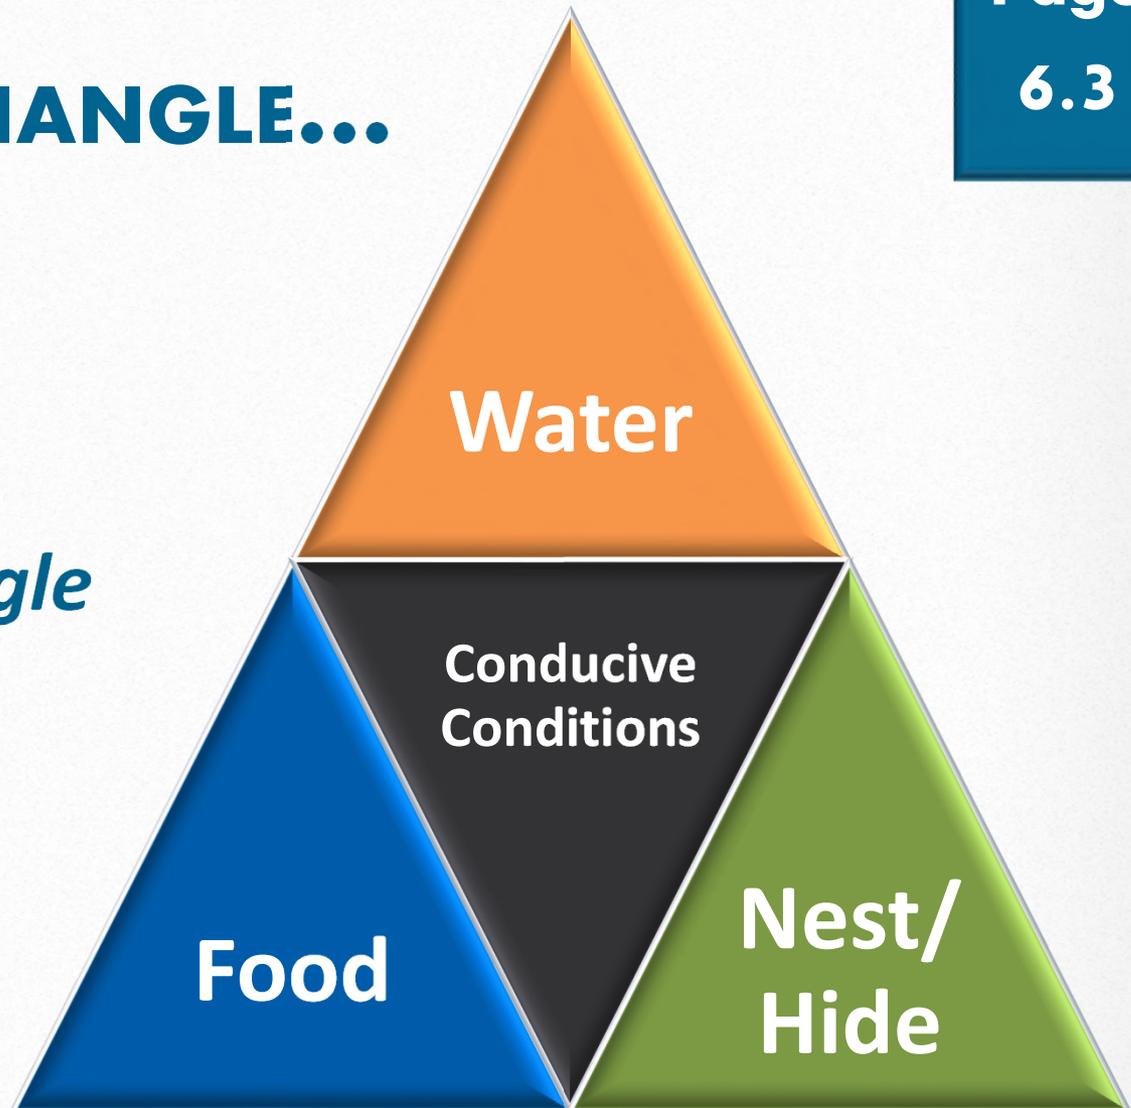

Environmental conditions trump genetics

Hygiene hypothesis

ANOTHER TRIANGLE...

The Pest Triangle

HOW COMMON ARE PESTS?

American Housing Survey (2015)

All Housing

- 11.2% Mice or Rats
- 11.8% cockroaches

Below Poverty

- 13.2% Mice or Rats
- 18.4% cockroaches

Rat feces in insulation

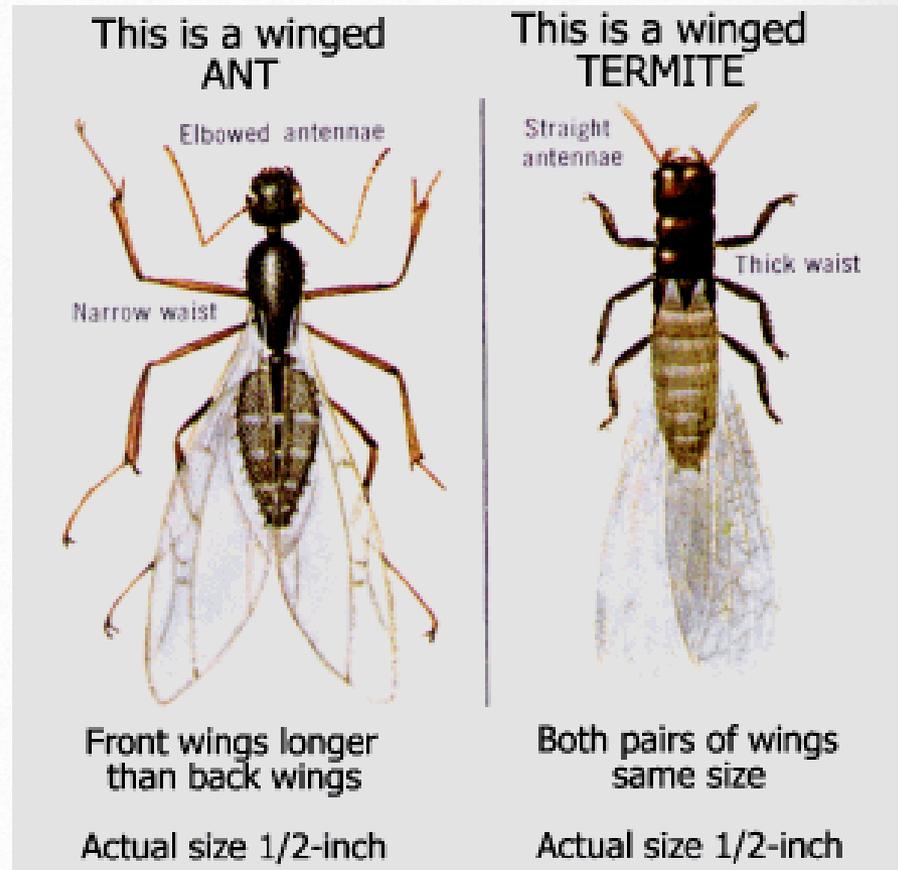

HOW COMMON ARE PESTS?

- **Philadelphia, 2007**
 - ▶ 62% Cockroaches
 - ▶ 72% Mice
- **National 2002-2006**
 - ▶ 33% Rat allergens (inner-city)
 - ▶ 63% Mice allergens
 - (95% low-income)
 - ▶ 85% Cockroach allergens

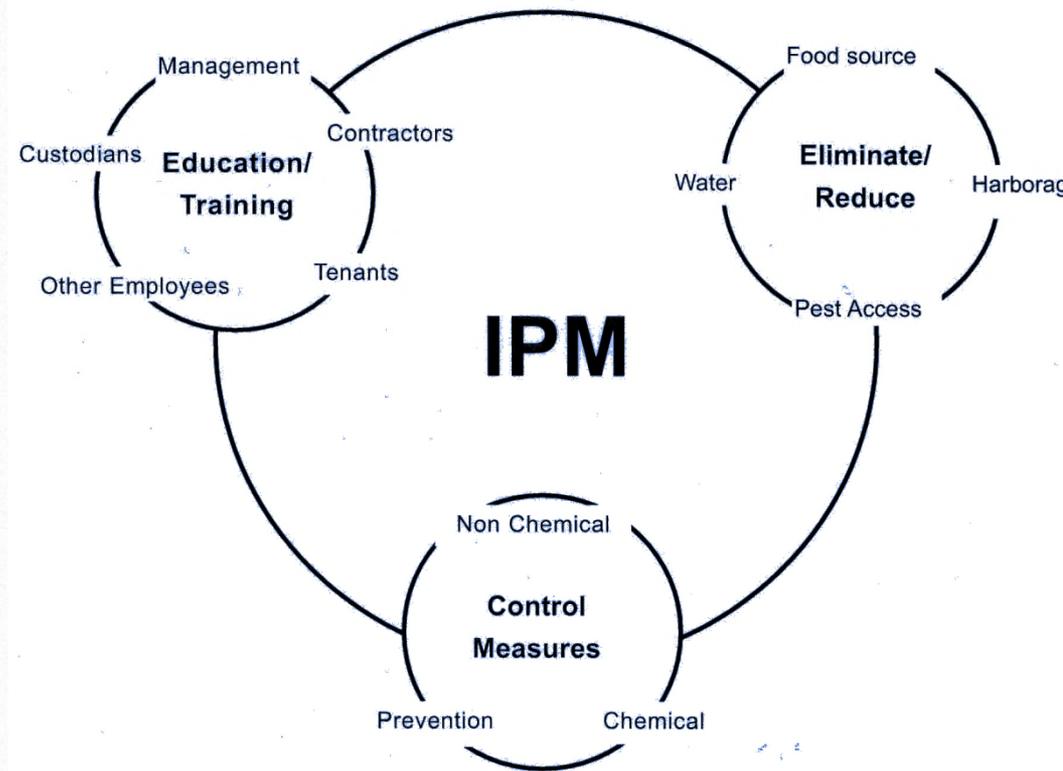

HOW DO WE CONTROL THEM?

- Prevention
- Sanitation
- Physical controls
- Ongoing monitoring

INTEGRATED PEST MANAGEMENT

- Best practice
- Multiple tactics
- Effective control
- Least risk to the environment
- Least exposure of non-target organisms
- Economic sustainability

REDUCE PESTICIDE USE

Pest pressure can drive people to unsafe use of pesticides.

- Too much
- Too many
- Wrong kind – unsafe & illegal

PESTICIDES AND POISONINGS

- 13,905 pesticide exposures requiring treatment reported (2016)
- Pesticides usually stored within reach of children
- 95% of all poisoning of children under age 6 occurred in their home.

THE IPM PYRAMID

Pesticides

Biological
Controls

Physical/
Mechanical
Controls

Design / Sanitation Practices

IPM v. CONVENTIONAL PEST CONTROL

Activities	Conventional	IPM
Program Strategy	Reactive pest control	Preventive pest control
Resident Education	Minimal	Extensive
Spraying & Fogging	Extensive	Rare
Rodent/bird control	Poisons	Exclusion/ Trapping

HUD GUIDANCE ON IPM (2011)

Page
6.9

- Communication
- Environmental conditions
- Identification and reporting
- Ongoing monitoring, reporting and tracking
- Action levels
- Waste management

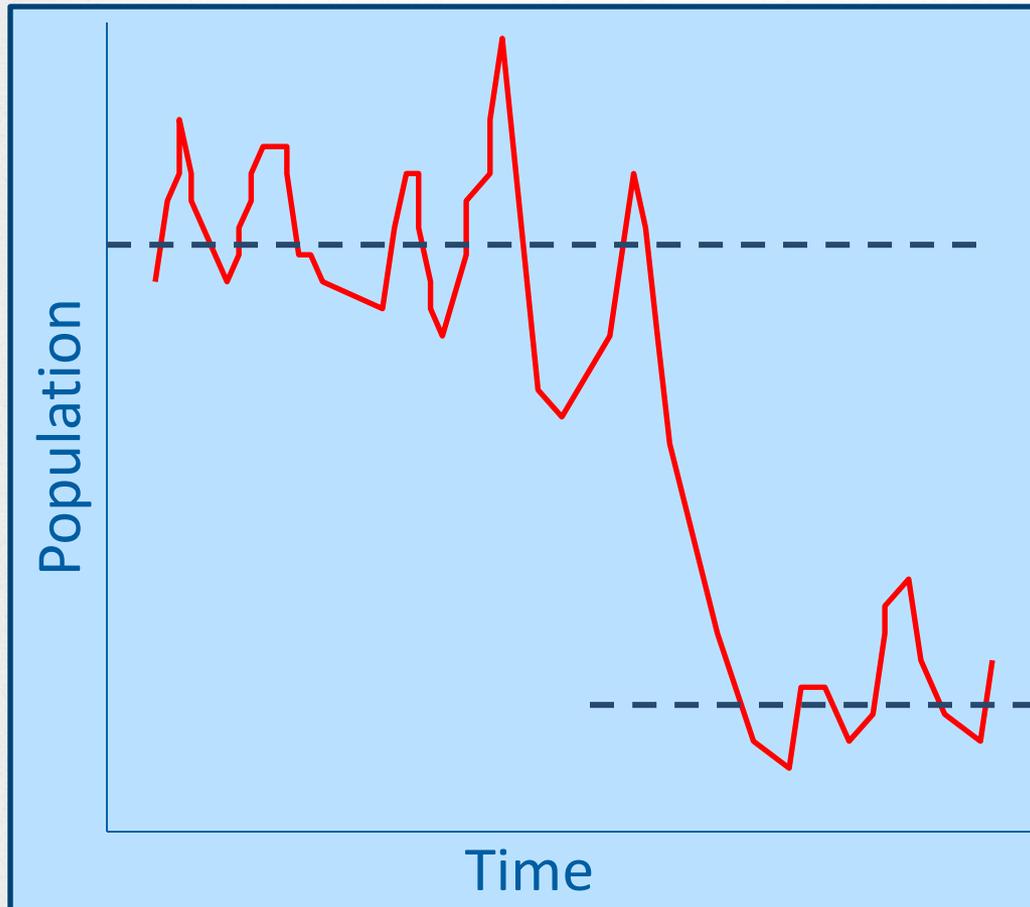

HUD GUIDANCE ON IPM (2011)

Page
6.9

- Appropriate pesticides
- Exclusion & denial
- Educational outreach
- State laws on used furnishings
- Use least-risk pesticides when necessary
- Pesticide-use notification signs

CHANGE THE HABITAT

- Don't just kill, change "conditions conducive" to pests
- Reduce the carrying capacity of the environment

IPM: STEP-BY-STEP

- Inspection & Identification
- Exclusion & Denial
- Education & Action
- Sanitation
- Physical control
- Monitoring

1. INSPECTION & IDENTIFICATION

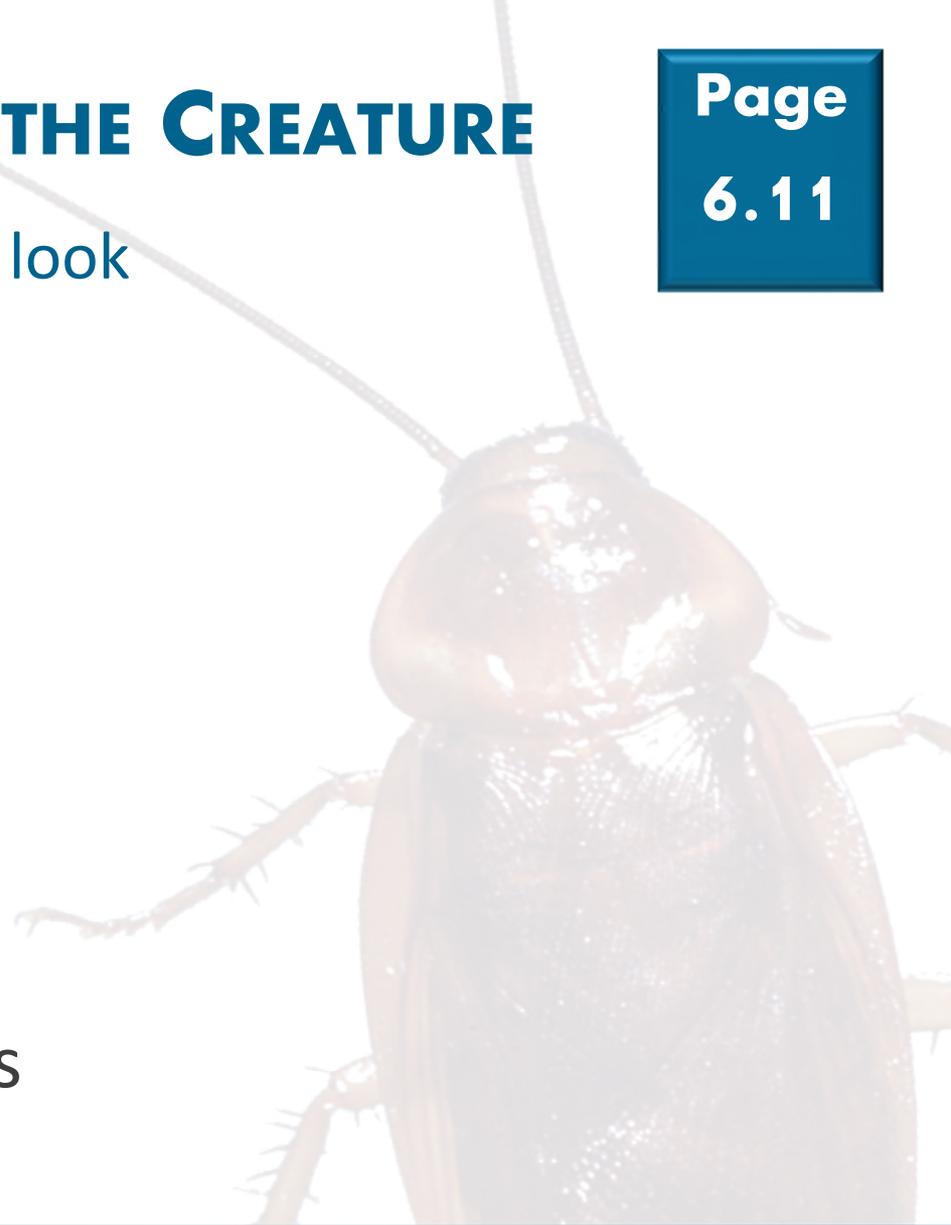

- Thorough inspection
- Identification of pests found

SEE THE CREATURE, BE THE CREATURE

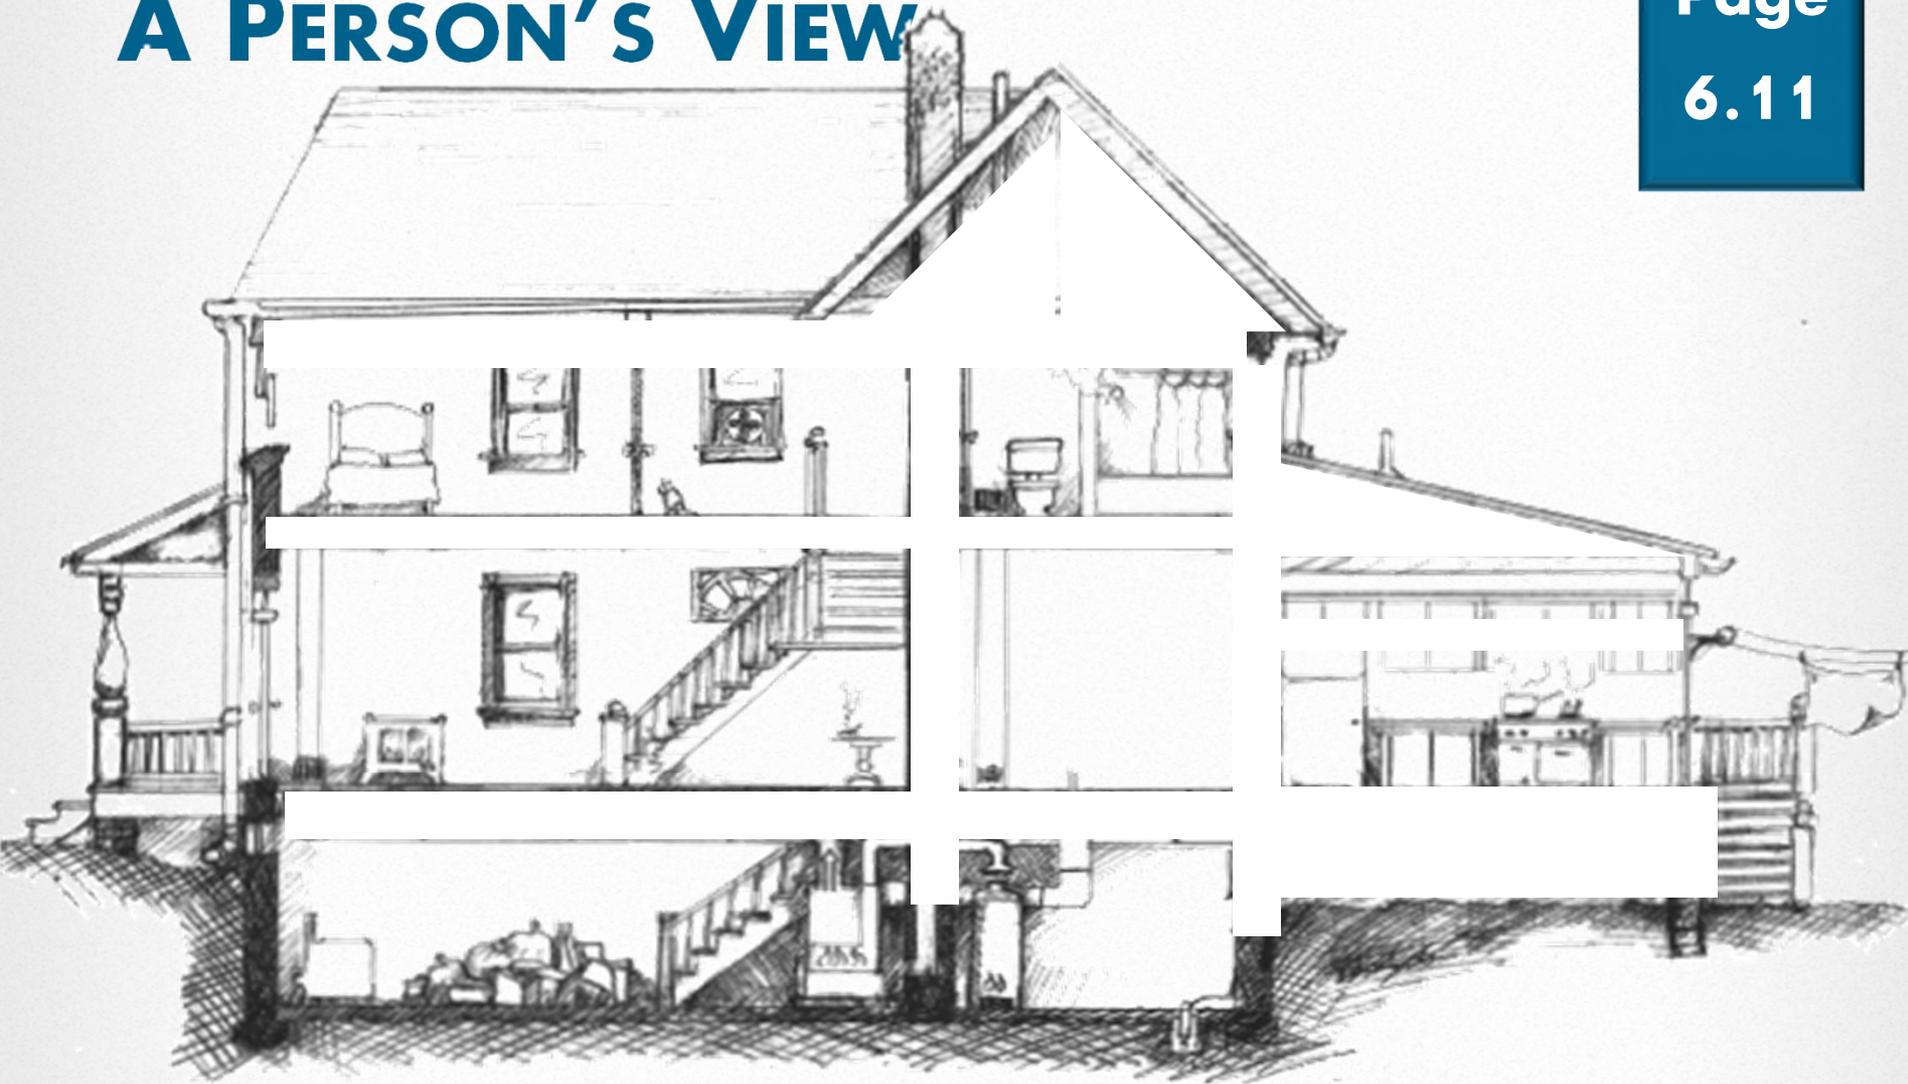

What to look for and where to look

- The pest
- Droppings
- Nests and burrows
- Food and water sources
- Hidden places
- Near entry holes
- Warm cavities for insects

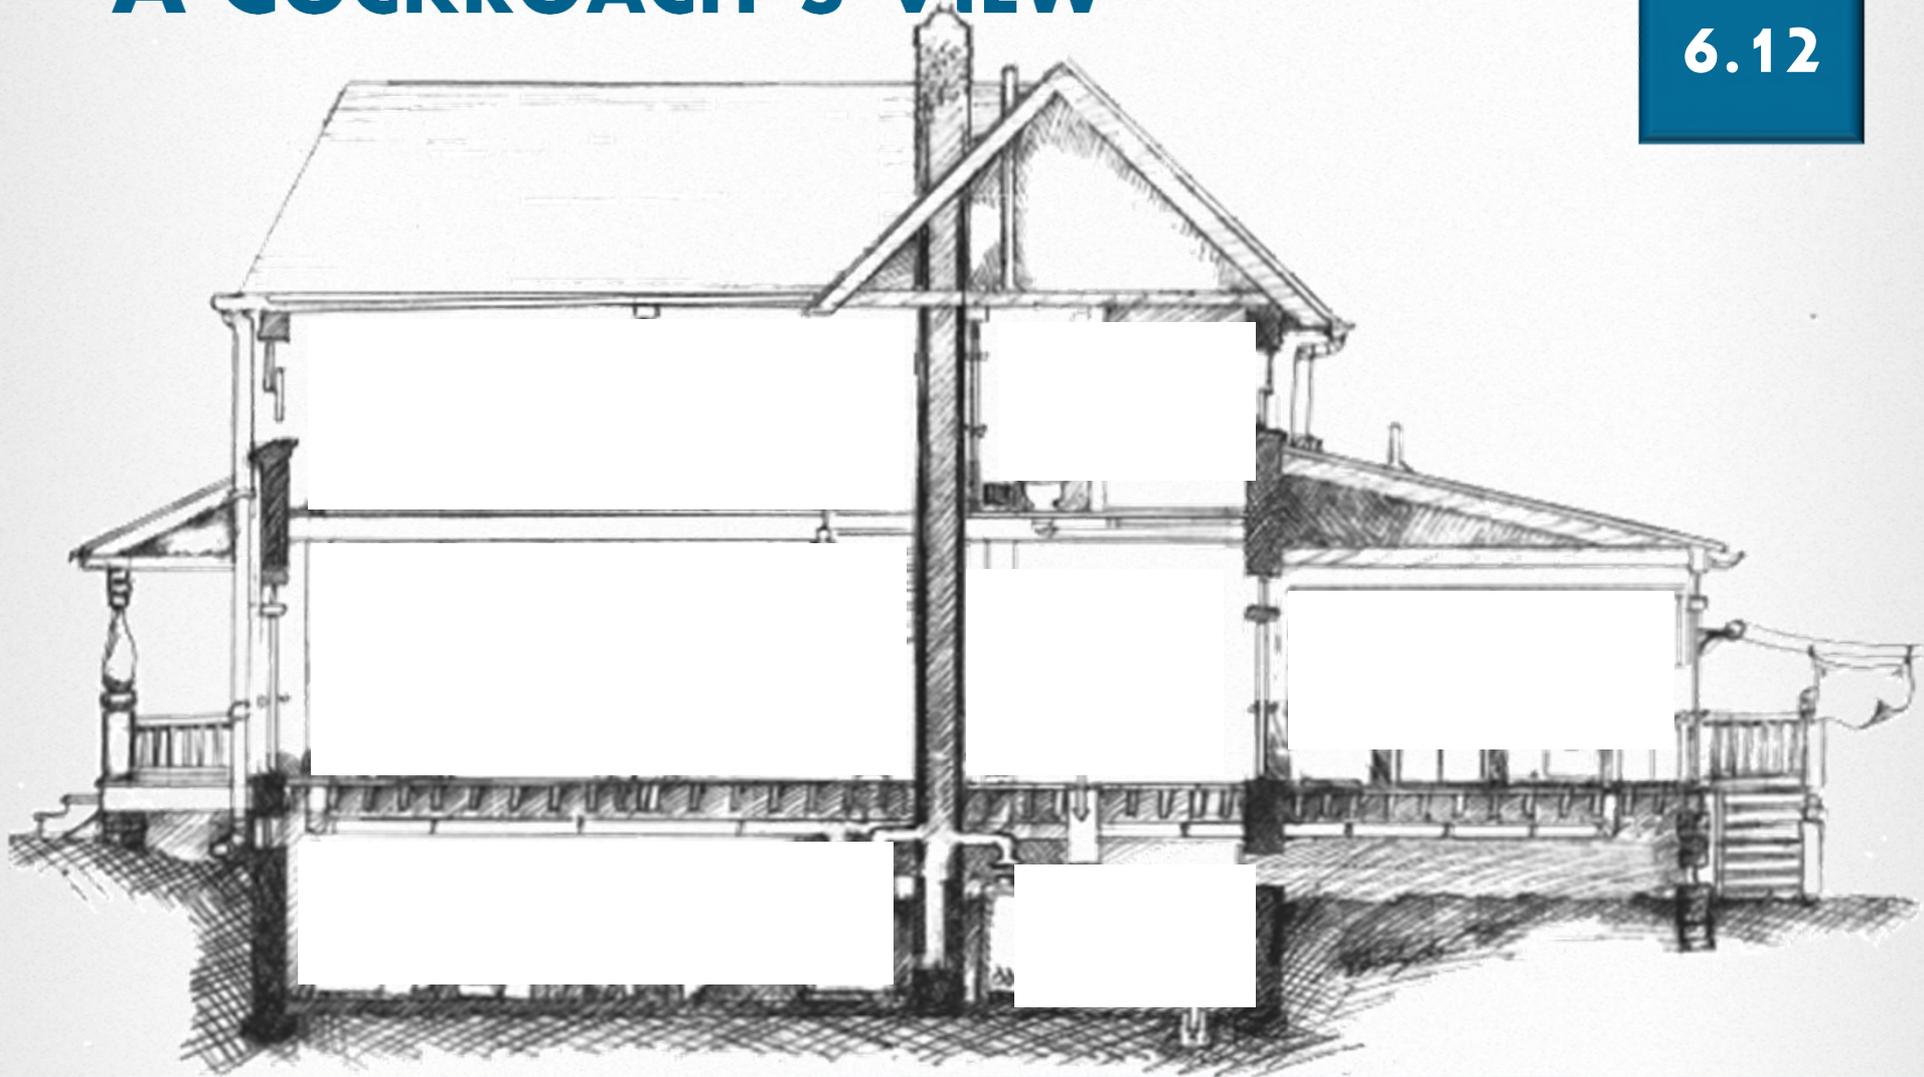

A PERSON'S VIEW

Page
6.11

A COCKROACH'S VIEW

Page
6.12

A COCKROACH'S VIEW

Page
6.12

*Rat proofing
did not work
here...*

*Get down on the ground and
look under the pipe...*

2. EXCLUSION AND DENIAL

- Stoppage
- Inspection
- Holes filled
- Stuff-It
- Silicone Caulk
- Spackle, etc

3. EDUCATION & ACTION

- Understand pests
- Control – what, how, and when
- Safe vs. unsafe practices
- Educating residents
- Choosing PCO's
- Training PCO's

4. SANITATION

- Food
- Water
- Harborage

Photo: City of Houston Bureau of Children's and Environmental Health 03/18/2008

WATER

- Essential for insects & rats, but not for mice or bedbugs
- Mosquitoes
- Structural damage

Photo: City of Houston Bureau of Children's and Environmental Health

5. PHYSICAL CONTROL

- Identify & assess problem
- Same strategy
- Different tactics – pest specific

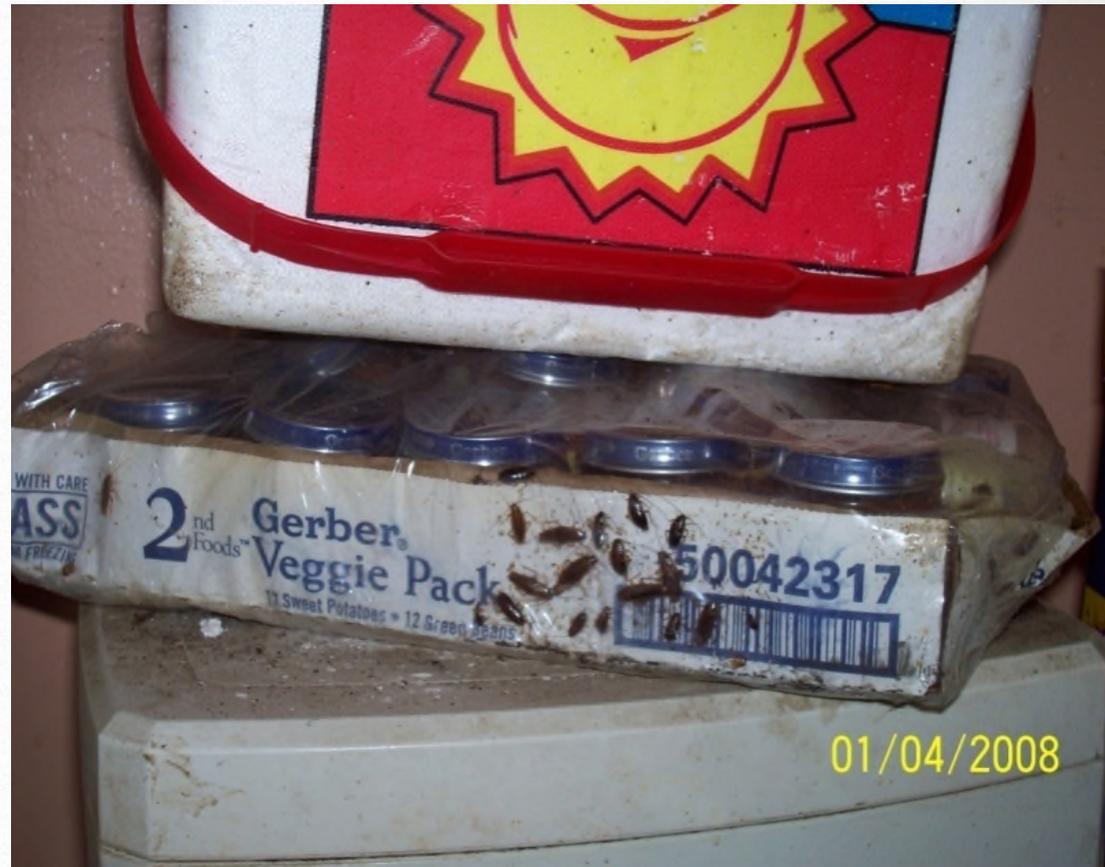

Photo: City of Houston Bureau of Children's and Environmental Health

REDUCE EXPOSURE

Choose safer products

- Roach baits
- Gels
- Dusts
- Glueboards and Snap Traps

Cockroach gel bait

ILLEGAL AND RISKY PESTICIDES

- Pesticides that look like candy - mothballs
- “Miraculous” Chinese Insecticide chalk
- “Tres Pasitos”
- Many pesticide have been withdrawn

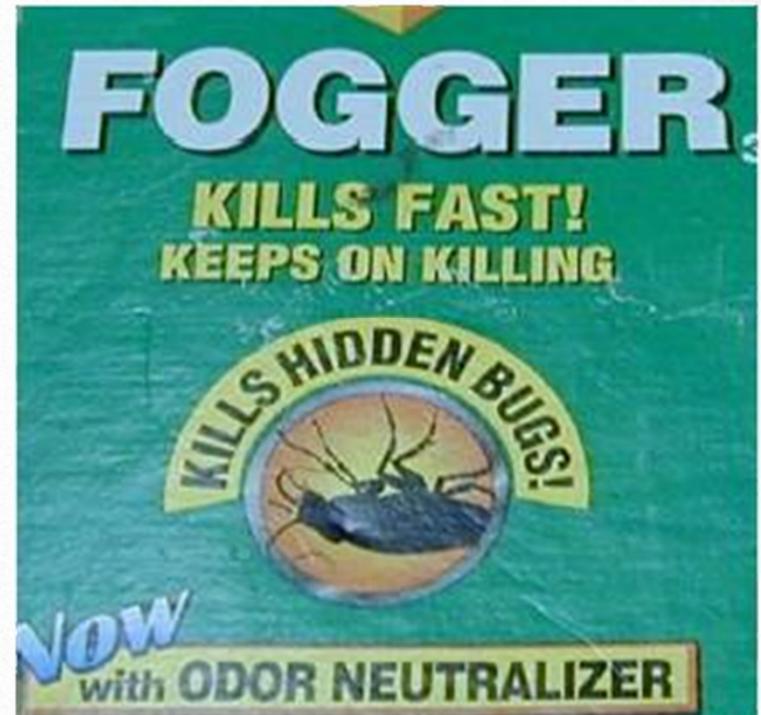

↑
candy!

FEDERAL PESTICIDE LAW

- Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)
- Administered by EPA
- Pesticide – Broad term
- No pesticides are safe – some are low-risk
- The label is the law

ARE THESE LABELS?

EPA PESTICIDE PRODUCT LABELS

- Product Name
- EPA Reg. No.
- Ingredients
 - ◆ Active
 - ◆ Inert / Other
- “Keep Out of Reach of Children”
- First Aid
- Net contents

Signal Word:
Caution
Warning
Danger
Poison – skull & crossbones

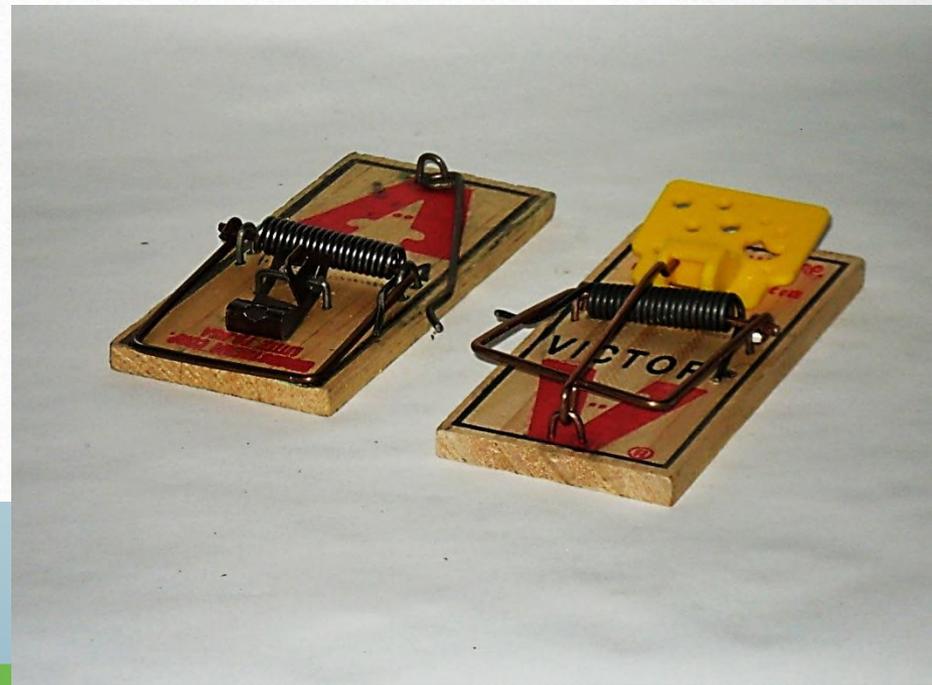

6. MONITORING

- Keep looking for pests
- Spot reinfestations
- Place in corners
 - ◆ Behind appliances
 - ◆ Under sink
 - ◆ Under cover!
- Do date & mark
- Don't disturb

MONITORING FOR RODENTS

- Similar to insects – use snap traps
- Place in corners, along runways, in tight dark spaces
- Check daily
- Increase trapping if monitors indicate activity
- Always have monitors for insects and rodents in place

Keep it Pest-Free

KNOW YOUR PESTS

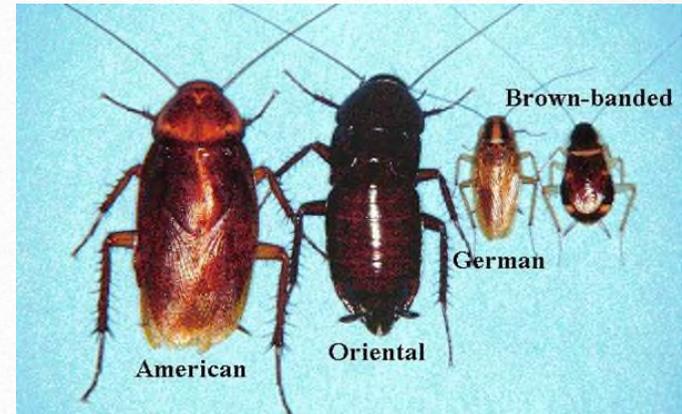

making homes
healthier

COCKROACHES

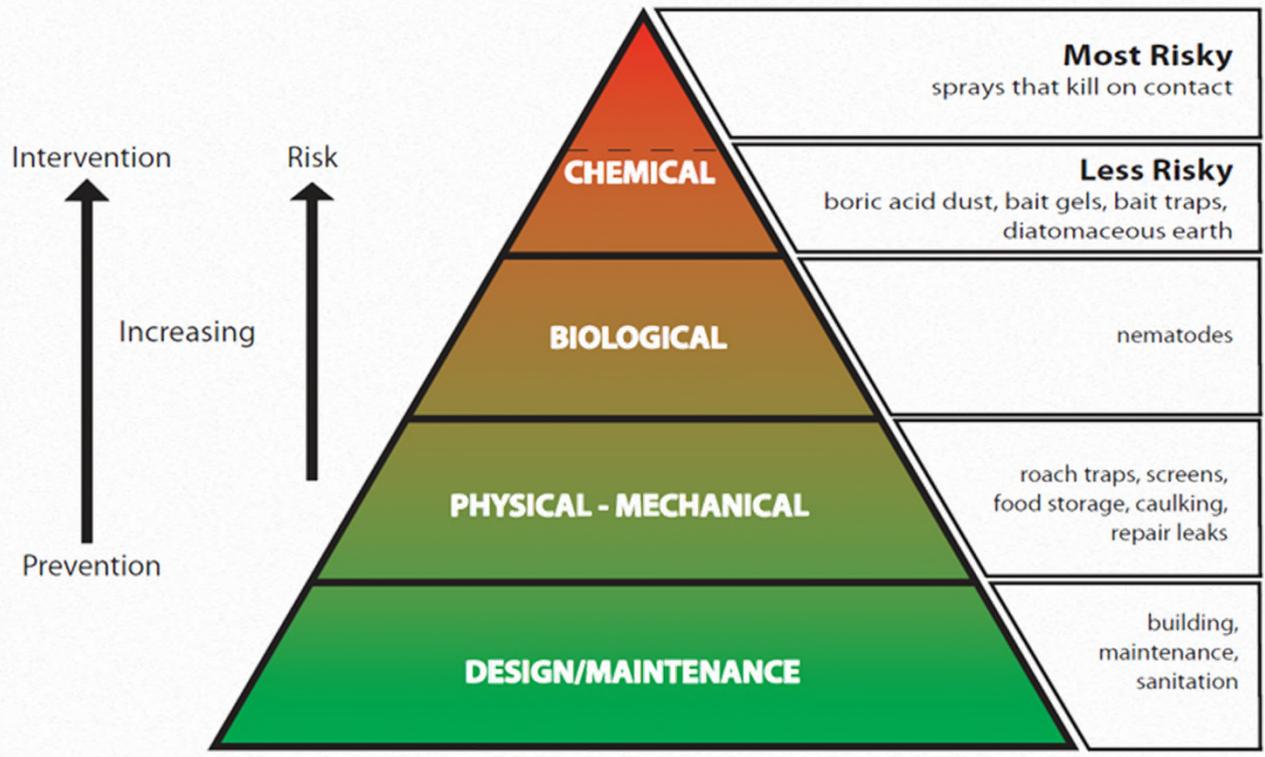

- Identification & biology
- Life cycle:
- Diseases
- Key harborage sites

Pest cockroaches of North America

German cockroach life cycle

HANDLING ROACHES THE IPM WAY

Pyramid of IPM Tactics for Roaches

Door

**Behind
wallpaper**

Wall clock

**Under a
cabinet shelf**

**Behind the
wall clock**

COCKROACH CONTROL

- Habitat modification
- Monitors
- Dust and caulk
- Baits and gels
- Insect growth regulators
- Sticky traps

RODENT CONTROL

- Rodents are mammals like us
- Think like a rodent
- Not all rodents are the same
 - ◆ Mice – curious & persistent
 - ◆ Rats – cautious & smart
 - ◆ Squirrels - outdoors

RODENT IDENTIFICATION

- House Mouse
 - Also: White Footed, Deer
- Norway Rat
- Brown rat, Wharf, Sewer, etc
- Roof Rat
- Black rat
 - Also: Cane rat, etc.
- Squirrel
- Groundhogs, etc.

RODENT REPRODUCTION

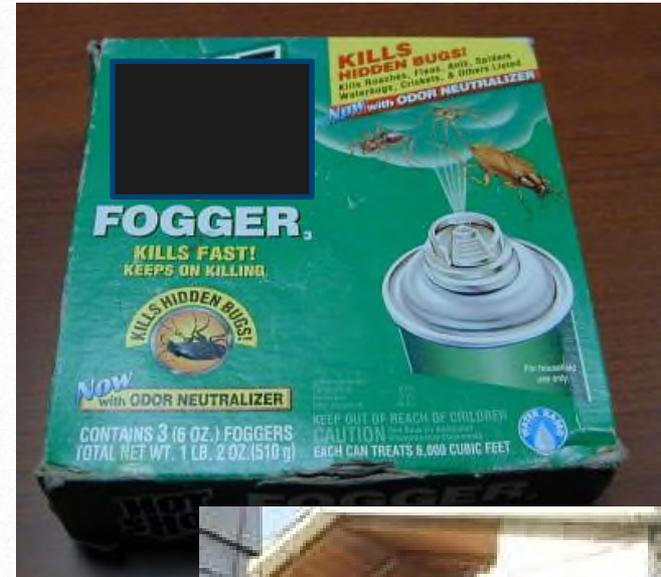

Demo

HOW TO TRAP A RAT AND A MOUSE

THINGS THAT DON'T WORK

- Contact sprays
- Foggers
- Mothballs
- Ultrasonics
- Dryer sheets, etc.

THINGS THAT MAY WORK, BUT...

- Essential oils and cleaners
- Carbon dioxide traps
- Kerosene
- Homemade traps and gadgets
- What have you seen?

BED BUGS - DON'T PANIC

- Can be avoided and eliminated
- Every skin irritation or bite is not bed bugs
- You can see them.
- Do not cause or spread diseases.
- Heat and/or steam can kill them.
- Protocols and communication key to control

BEDBUGS

- Identify properly – don't assume
- Life cycle

Changlu Wang & John Obermeyer/Rutgers University*

BEDBUGS - CONTROL

- Exclusion
- Preparation
- Traps – interceptors

Center
Well

Outer
Pitfall

BED BUG - TREATMENT

- Inspection
- Vacuum
- Heat or cold
- Pesticides by PCO only
- Re-inspection & retreatment
- Encasements & interceptors

CODE REQUIREMENTS

Code requirements related to pests

- Infestation
 - ▶ 309.1 Infestation
- 304.14 Insect screens
- 302.5 Rodents
- 309.2 Owner
- 309.3 Single occupant
- 309.4 Multiple occupancy
- 309.5 Occupant

RESOURCES

- Cooperative Extension Services
- State Pesticide Regulator for Pest Control Applicators/Operators
 - ◆ Often at universities
- www.ehw.org
- healthyhousingsolutions.com/training-course/ipm/
- <http://www.stoppests.org/>

KEY MESSAGES

- Pests can create allergens and be vectors of disease.
- Control of pests through pesticides can lead to poisonings and other neurological problems.
- Some pesticides found in homes have been banned.
- Make house less hospitable for pests. Prevent entry, control food, water, and places for shelter.
- Integrated Pest Management is the recommended strategy.

LEARNING OBJECTIVES

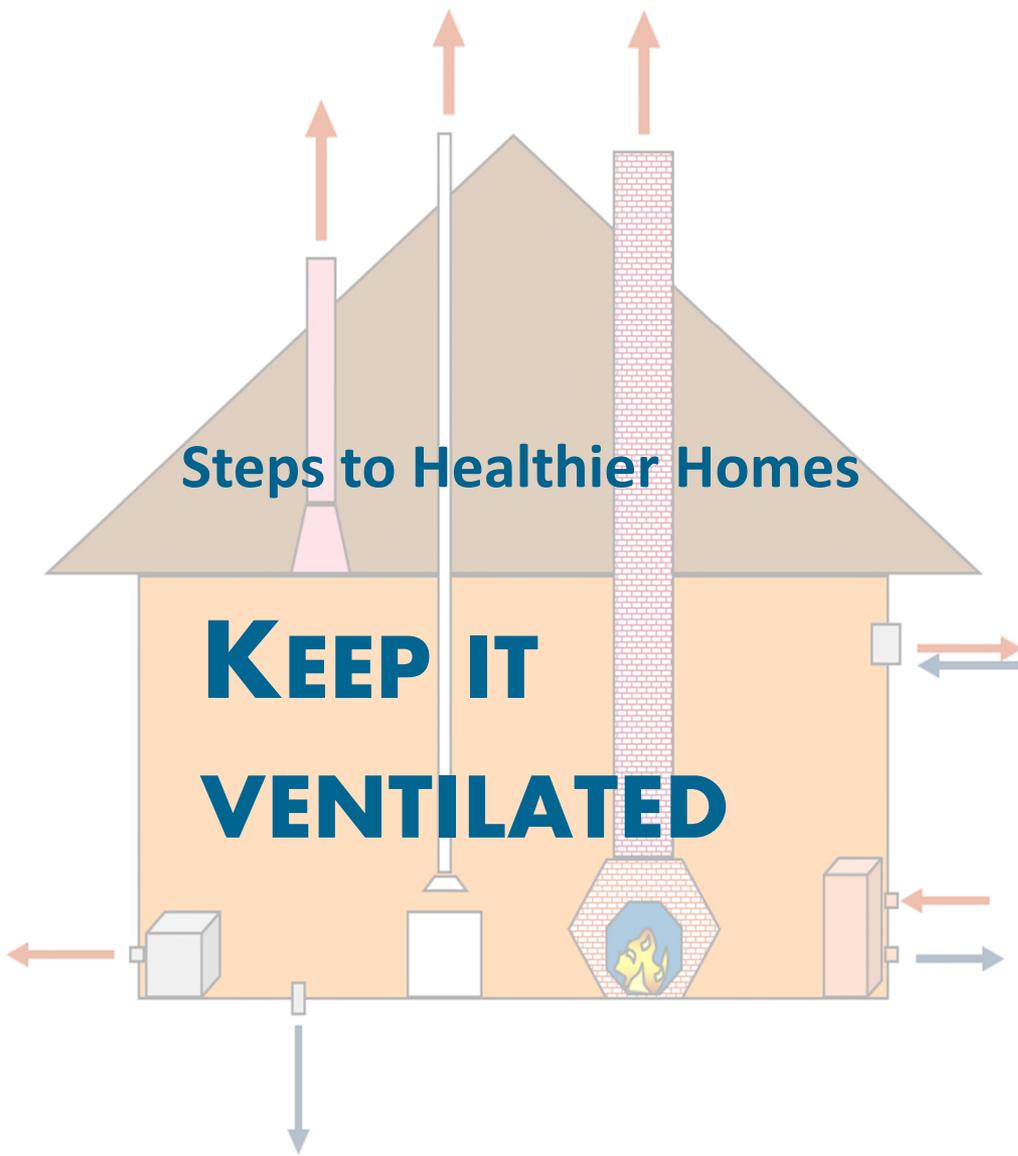

Name three illnesses or injuries associated with pest infestation.

Identify three clues of pest infestation.

Identify the three strategies associated with an IPM approach.

Name two illegal pesticides that may be used in the home.

-  **Start with People**
-  **House as a System**
-  **Keep It:**
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  **Making it Work**

LEARNING OBJECTIVES

Page

7.1

NAME five unhealthy conditions associated with poor ventilation.

LIST five things (e.g. a room, appliance, mechanical system) in a household that need ventilation.

NAME three things that power airflow in a building.

LIST three household contaminants that can be removed by ventilation.

DESCRIBE two ways ventilation reduces air contaminant levels.

WHY WELL VENTILATED?

Page

7.1

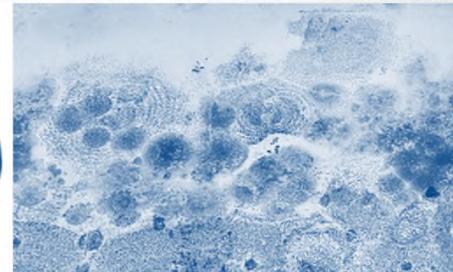

Pollutants found in concentrations 2-5 times higher indoors than outdoors.

WHY WELL VENTILATED?

Proper ventilation can reduce hazards of:

- Volatile organic compounds
- Moisture
- Environmental tobacco smoke
- Particulate matter
- Allergens
- Mold
- Carbon monoxide
- Formaldehyde

WHY WELL VENTILATED?

Proper ventilation can also address sources of combustion contaminants:

- Ovens as heaters
- Spillage from furnace, water heater, fireplace
- Ventless heater or fireplace
- Car exhaust from attached garage

TYPE OF HEATING FUEL

- Water Heater
 - ◆ 49% have gas, LP/bottled gas
 - ◆ 43.6% have electricity
- Clothes Dryer
 - ◆ 20.9% have gas, LP/bottled gas
 - ◆ 79% have electricity

From American Housing Survey – 2017

PRIMARY HEATING EQUIPMENT

Primary heating equipment:

- 65.3% have warm air furnace
- 9.1% have steam or hot water system
- 11.6% have electric heat pump

But . . .

- 749,000 (0.6%) have room heaters without flue
- 1.3 million homes (1.1%) rely on wood-burning stoves
- 58,000 (0.5%) rely on cooking stoves

For their primary source of heat!

From American Housing Survey – 2017

HEATING PROBLEMS

- **6.2% were uncomfortably cold** for 24 hours or more
 - ◆ 8.8% for renters
 - ◆ 10.5% for residents below poverty level
- **0.8% were uncomfortably cold** for at least 24 hours due to **inadequate heating capacity**
 - ◆ 1.6% for renters
 - ◆ 1.8% for residents below poverty level
- **0.9% were uncomfortably cold** for at least 24 hours due to **inadequate insulation**
 - ◆ 1.5% for renters
 - ◆ 1.8% for residents below poverty level

From American Housing Survey – 2017

SOURCES OF COMBUSTION CONTAMINANTS

- Oven as heater
- Spillage from furnace, water heater, fireplace
- Ventless heater or fireplace
- Car exhaust from attached garage

COMBUSTION CONTAMINANTS? HEALTH EFFECTS

- **Carbon Monoxide**
 - Fatigue, headaches, dizziness, confusion
 - The “Silent Killer”
- **Nitrogen Dioxide**
 - Eye, nose, and throat irritation
 - Shortness of breath

CARBON MONOXIDE LIMITS

Agency	Situation	Maximum CO Level	Duration
Environmental Protection Agency (EPA)	Outdoor / Ambient Air	9 ppm	8 hours
		35 ppm	1 hour
Consumer Products Safety Commission/Underwriter Laboratories (UL)	Alarms for Immediate Life Threats in Residential Air	70 ppm	1 - 4 hrs
		150 ppm	10 - 50 min
		400 ppm	4 - 15 min
Canadian Department of National Health & Welfare	Air in Residences	11 ppm	8 hours
		25 ppm	1 hour
World Health Organization	Indoor Air	32 ppm	Max.

CARBON MONOXIDE ALARMS

Consumer Product Safety Commission (CPSC) recommends:

- Place near sleeping area
- Put on every level of a home to provide extra protection
- Do not install directly above or beside fuel-burning appliances

*Combination smoke
and CO alarm*

CO ALARM INSTALLATION

Should be installed:

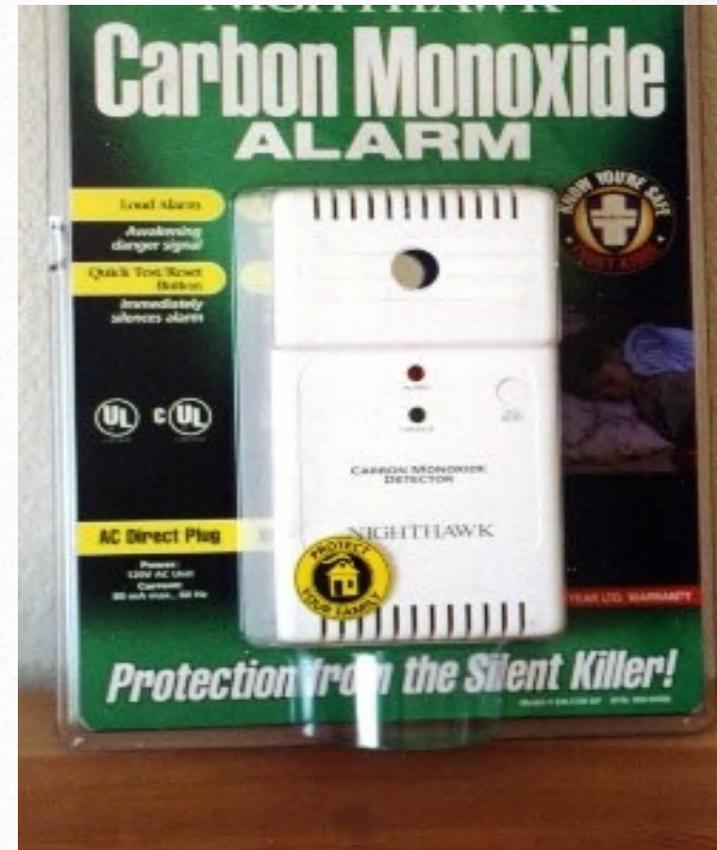

- According to the manufacturer's instructions
- Higher placement is preferred
- One CO alarm should be installed in the hallway outside the bedrooms of each separate sleeping area of the home

WHY VENTILATED

Health Effects

Approximately 500 carbon monoxide deaths plus more than 15,000 non-fire related healthcare visits per year.

WHY VENTILATE

Health effects

- Higher rates of respiratory irritation and illness in housing with poor ventilation
 - Common colds
 - Influenza
 - Pneumonia
 - Bronchitis

...and increased rates of absence from school or work

Well ventilated?

A WELL-VENTILATED BUILDING?

GOOD BUILDING VENTILATION PROVIDES:

Local Exhaust Ventilation

- to remove moisture, odors, and other pollutants at the source

Whole House Ventilation

- for supplying fresh air to reduce contaminants by dilution

Control of airflow through building

- so unbalanced airflows can't carry contaminants into and around the house

UNDERSTANDING VENTILATION

Key Concepts

- If any portion of air leaves a house the same amount will enter
- Air, like water, seeks the path of least resistance
- When heated, air rises
- When cooled, air falls
- Air can be hot, cold, wet, dry, or polluted when it enters or exits a house

WHAT POWERS AIR FLOW?

Temperature differences

Fans

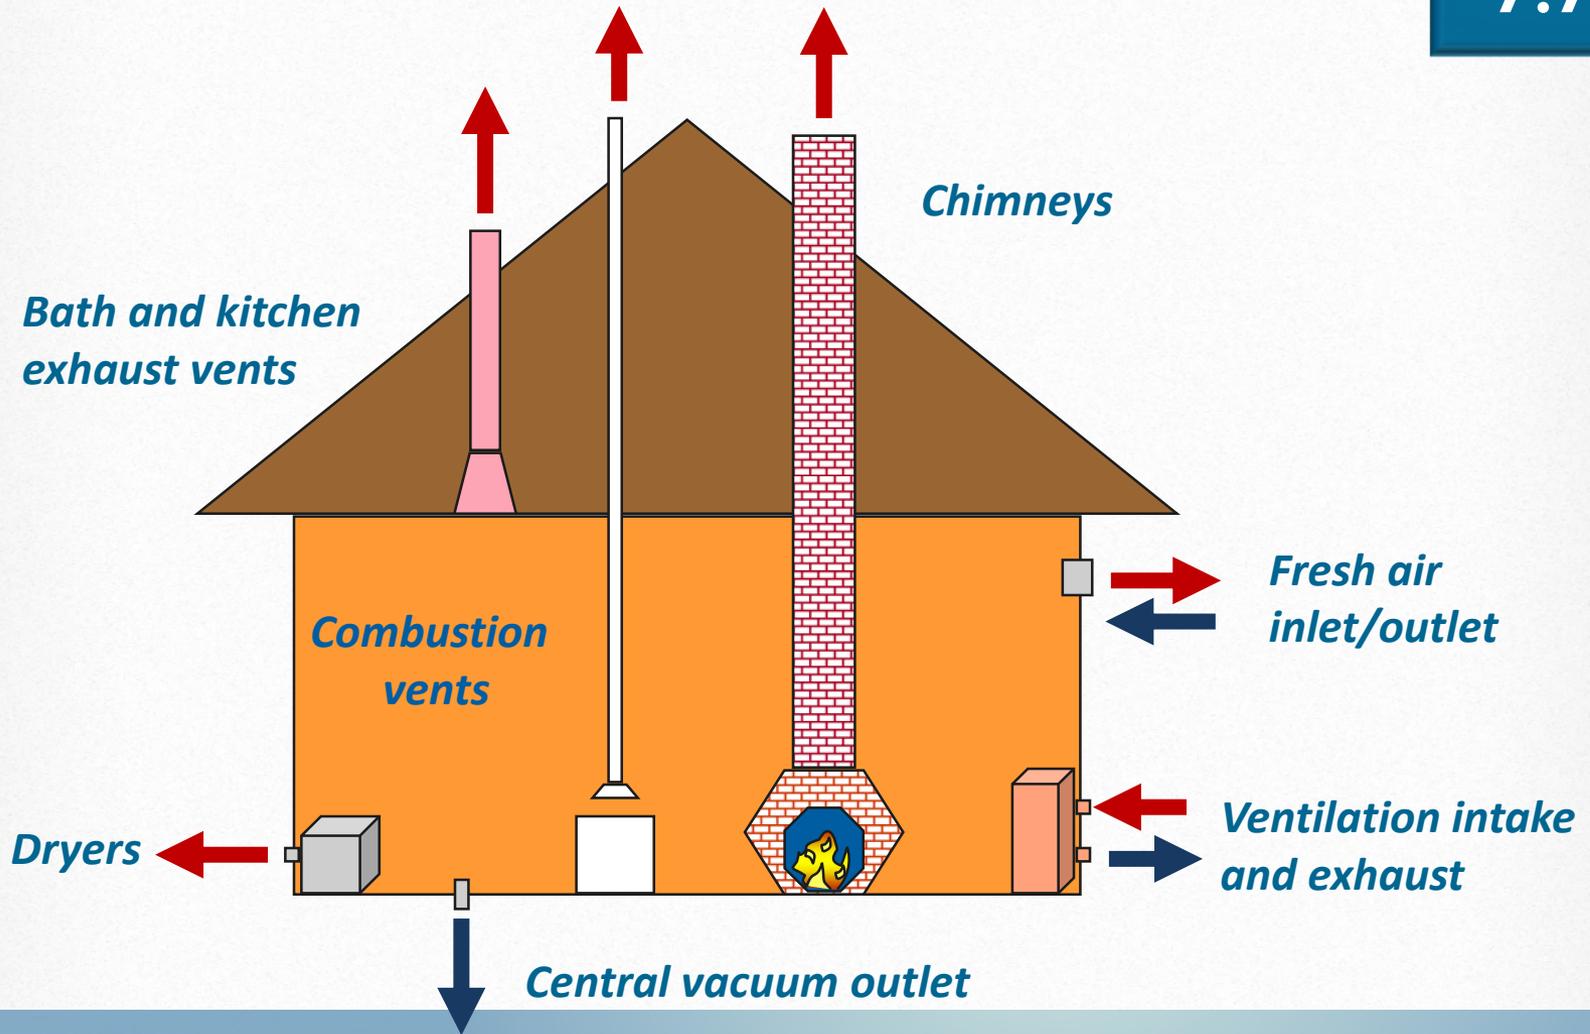

Wind

AIR FLOW IN HOMES

- Typical homes do not have a planned supply of fresh air.
- We depend on leakage such as windows, doors, and cracks.
- This is usually not adequate.

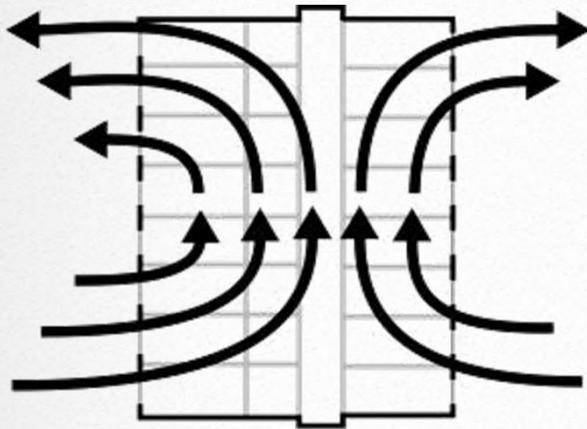

AIR FLOW NEEDS DESIGNED HOLES

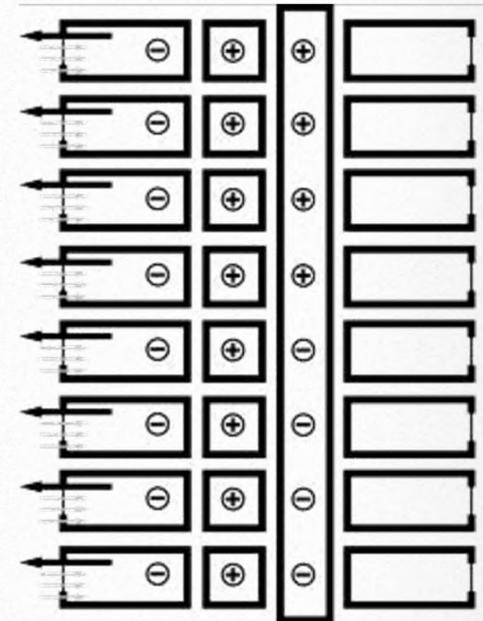

Multifamily dwellings should have planned fresh air supply because:

- Neighbors are closer together
- Stack effect- this dominates in cold weather

Typical Air Flow

- Odors, pollutants and stale air from lower floors supplied to upper floors
- Adversely affects smoke and fire spread, IAQ, comfort and energy efficiency
- Operable windows make problems worse

Distributed Ventilation

- Units ventilated individually
- Make-up air is provided from exterior not from corridors
- Corridors are pressurized only for smoke and odor control, not for make-up air requirements
- Corridors are pressurized by individual fans supply each corridor, not by a central roof-top system
- Ductwork between floors avoided

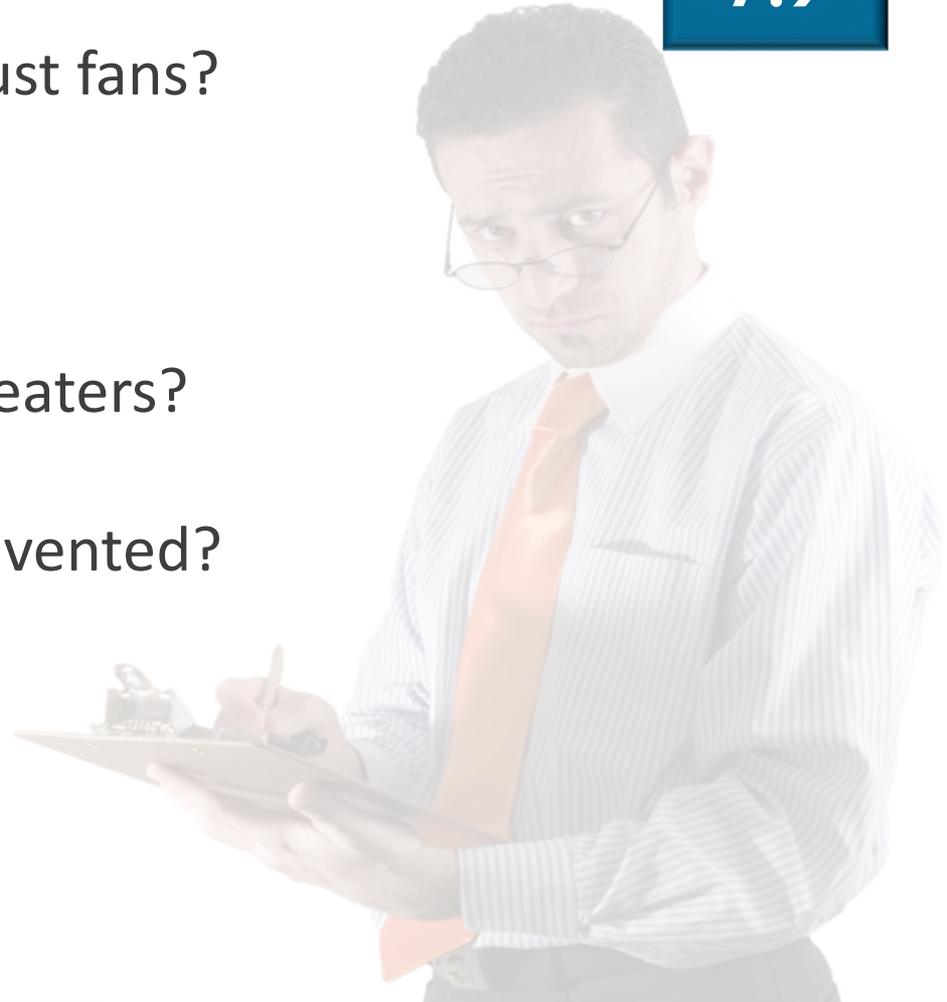

Multifamily exhaust only – new construction

WHAT ARE WE LOOKING FOR?

- ☑ Bath, dryer, and range exhaust fans?
- ☑ Gas stove used as heater?
- ☑ Windows work?
- ☑ Smoke alarm goes off?
- ☑ Unvented gas or kerosene heaters?
- ☑ Vented hot water heater?
- ☑ Furnaces, boilers, fireplaces vented?
- ☑ Rooms without windows?
- ☑ Lingering odors?
- ☑ Stale air?
- ☑ Windows fog?

THINGS THAT NEED EXHAUST VENTILATION

- Bathrooms
- Kitchen ranges
- Clothes dryers
- Boilers, furnaces, hot water heaters
- Fireplaces, wood burning stoves

*Is there an
exhaust in the
bathroom?
Does it work?*

TESTING EXHAUST FAN: THE CHARMIN METHOD

Page
7.10

Damper work?

Ducted ok?

LOCAL VENTILATION: KITCHEN

Remove moisture, odors, grease

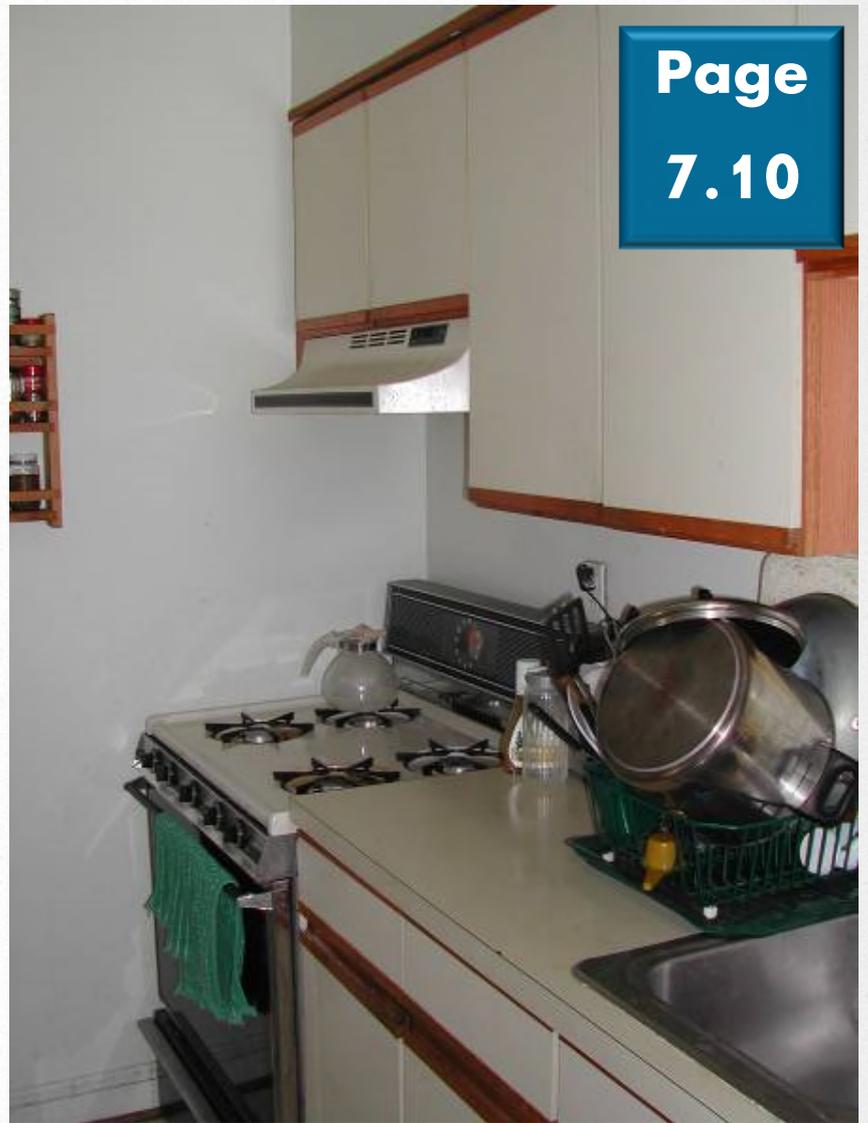

If gas oven or range, remove products of combustion:

- moisture, CO, NO₂

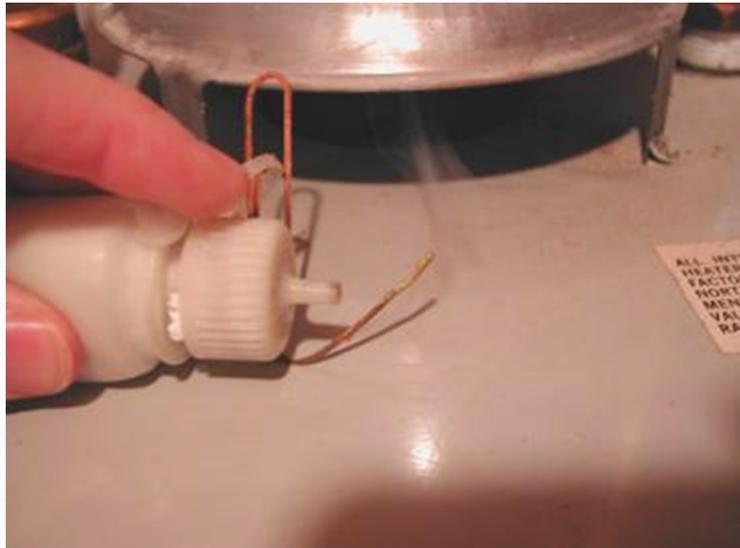

Must be vented to the outside

If it is not reasonably quiet, many people will not use it.

Leaks in ducts:

- Cause pressure imbalance
- “Mine” contaminated air from garages, crawlspaces
- Increase energy costs

Does this look bad?

*Poorly sealed
filter access panel*

MERV- FILTER RATING SYSTEM

- Minimum Efficiency Rating Value (MERV)
- ASHRAE Standard 52.2 – Efficiency in collecting very small particles

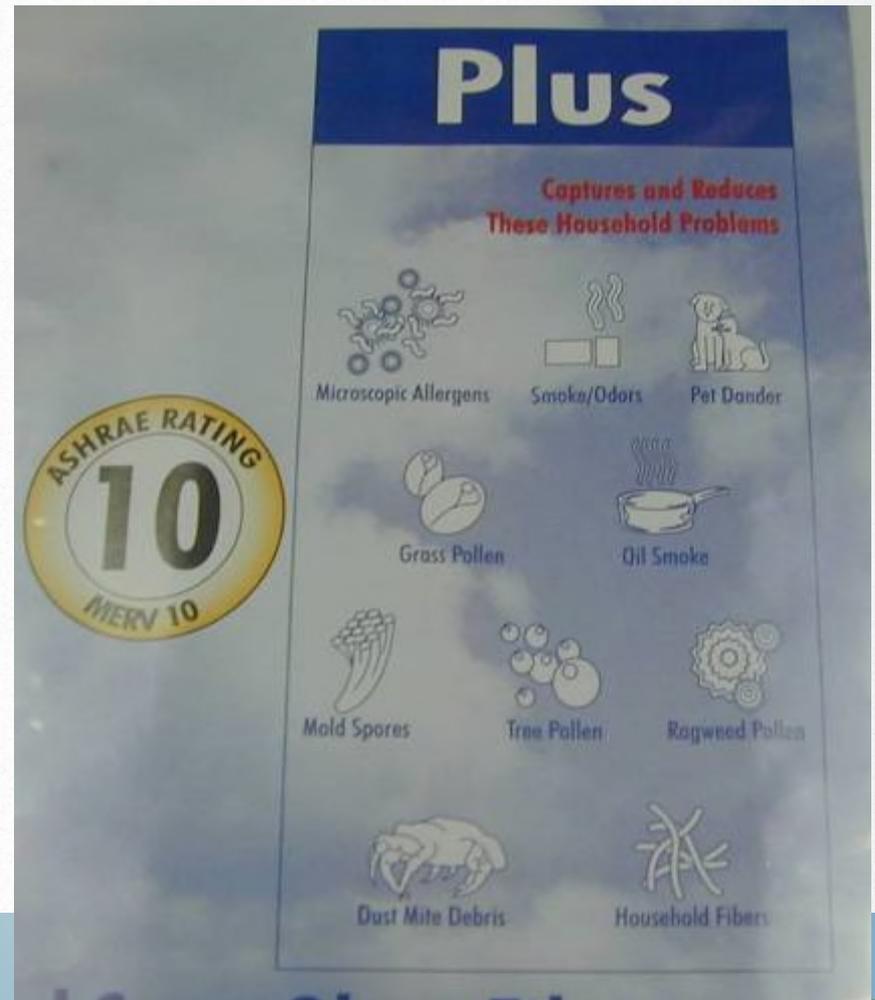

MERV RATINGS

MERV Ratings

MERV	Particle size	Typical controlled contaminant
1-4	>10.0	<i>Pollen, sanding dust, textile and carpet fibers</i>
5-8	3.0-10.0	<i>Mold, spores, hair-spray, cement dust</i>
9-12	1.0-3.0	<i>Legionella, lead dust, welding fumes</i>
13-16	0.3-1.0	<i>Bacteria, most tobacco smoke, insecticide dust, copier toner</i>
17-20	≤ 0.3	<i>Virus, combustion particles, radon progeny</i>

ORIGINAL FORMULA WITH ADDED LURE

KILLS ROACHES
WATERBUGS, AND SILVERFISH!

CAUTION
KEEP OUT OF REACH OF CHILDREN.
SEE SIDE / BACK PANEL FOR FIRST AID
AND ADDITIONAL PRECAUTIONARY STATEMENTS

NET WT. 2OZ. (56g)

***EPA Registration
Number is Key***

STORING HAZARDOUS MATERIALS

- Well labeled bottles
- Easy to identify
- Store hazardous materials in secure location

What about bug spray?

ARTS & CRAFT MATERIALS

FOOD SAFETY

Refrigerator:

- 40 degrees F

CLEAN

SEPARATE

Freezer:

- 0 degrees F

COOK

CHILL

FIRES AND BURNS

- House fires
- Water heater temperature

Home Fires from Smoking

- 7,600 fires each year
- Leading cause of civilian fire deaths
- 67% from abandoned/discarded smoking materials
- Bedroom - leading area of fire origin
- Fires occurred most often from noon to 8 p.m.

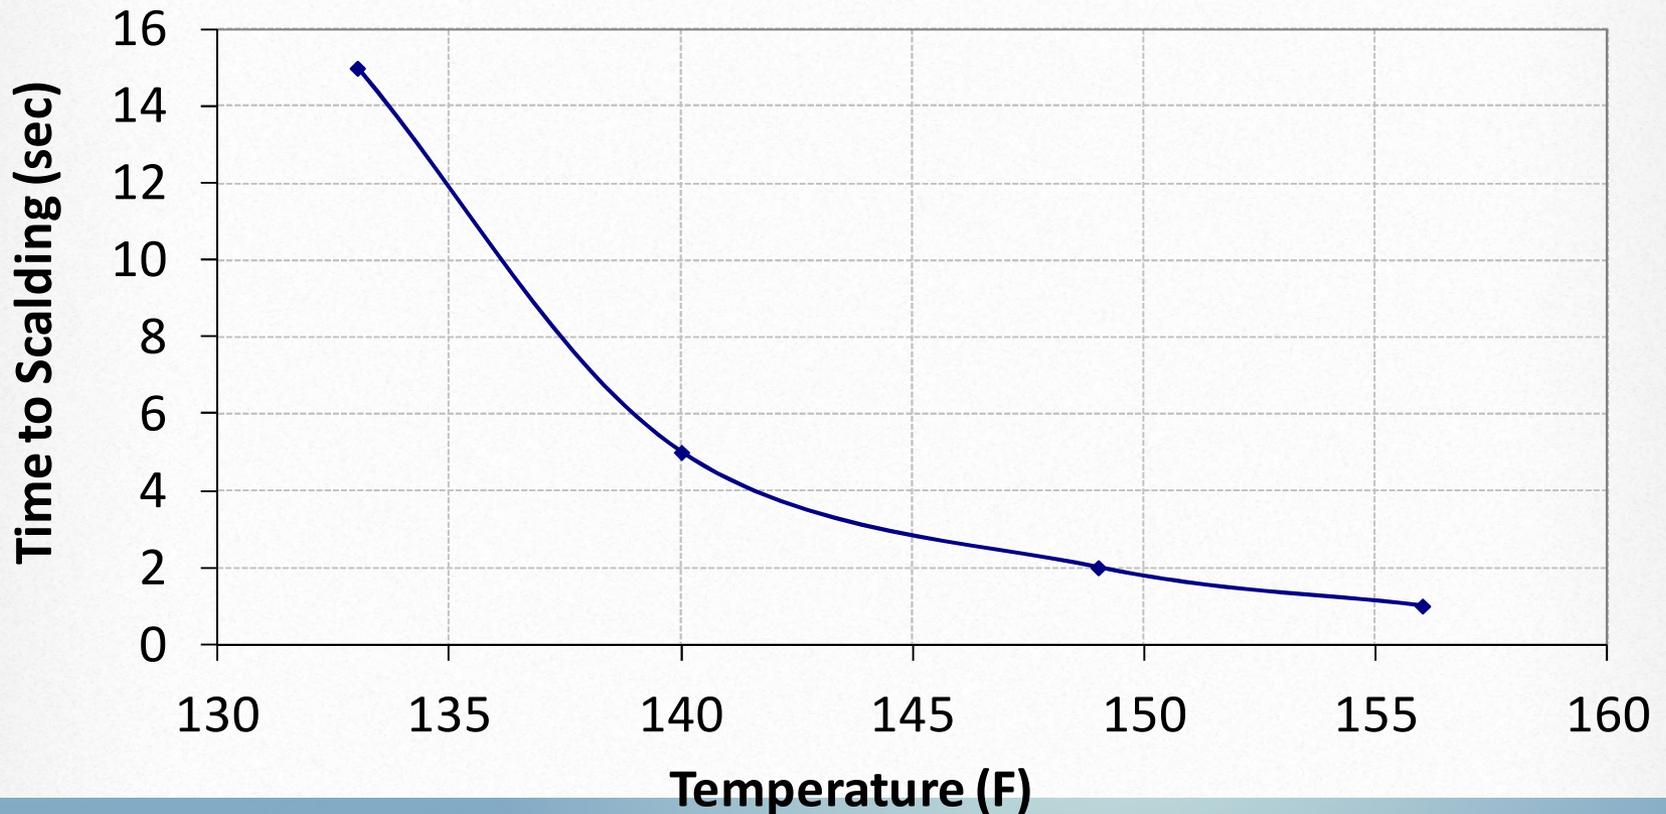

- Smoke Alarm
- CO Alarm
- Fire Extinguishers

SCALDING

To avoid risk of scalding:
Hot water should be less than 120° F

CHOKING AND SUFFOCATION

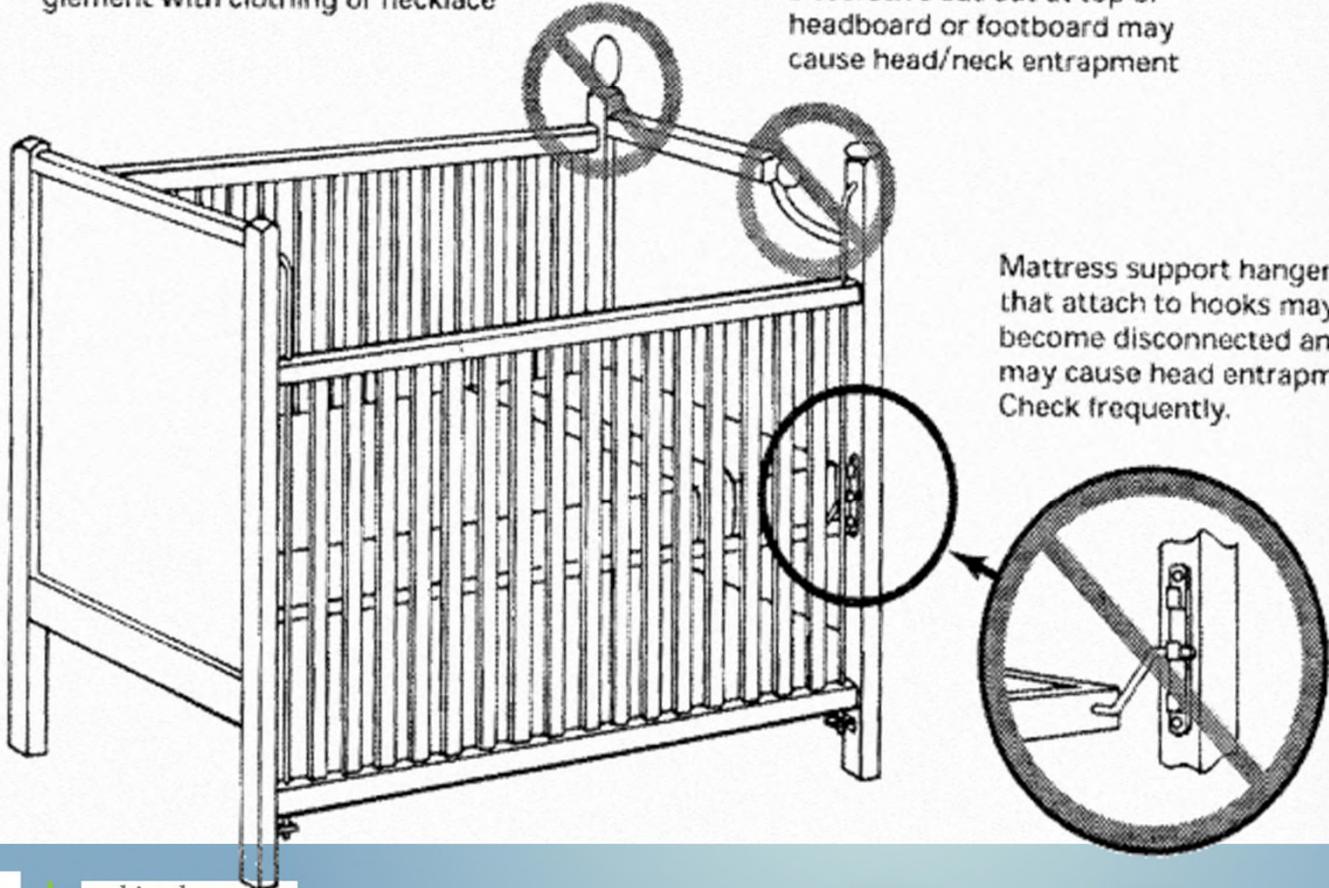

CRIB SAFETY

Corner post extensions greater than 1/16 of an inch (1 1/2 mm) may cause entanglement with clothing or necklace

Corner post extensions less than 1/16 of an inch

Decorative cut-out at top of headboard or footboard may cause head/neck entrapment

Mattress support hangers that attach to hooks may become disconnected and may cause head entrapment. Check frequently.

Choke hazards?

Electric shock hazard?

DROWNING

FIREARMS

**Trigger
locks and
secured
storage**

Store ammunition separate from weapon

KEEP IT SAFE

There are many ways to be injured in the home

IPMC SECTIONS RELATED TO SAFETY

304.10

- Stairways, decks, porches and balconies

304.13

- Window, skylight and door frames

304.18

- Building security

304.18.2

- Windows

305.2

- Structural members

IPMC SECTIONS RELATED TO SAFETY

305.4

- Stairs and walking surfaces

305.5

- Handrails and guards

306.1

- General

402.2

- Common halls and stairways

IPMC SECTIONS RELATED TO SAFETY

604.2

- Service

604.3

- Electrical system hazards

605.2

- Receptacles

605.3

- Lighting fixtures

KEY MESSAGES

- Injuries are not accidents. They are preventable.
- There are many simple and inexpensive ways to prevent home injuries.
- Children and older adults are more at risk for injuries in the home.
- Falls, poisoning, and fires/burns are the most common causes of injury deaths.

LEARNING OBJECTIVES

Page
8.18

EXPLAIN the difference between an injury and an accident.

NAME the 3 most common home injury related causes of death.

NAME five locations to look for safety hazards in the home.

NAME five ways to prevent home injuries.

Steps to a Healthier Home

KEEP IT CONTAMINANT-FREE

-  **Start with People**
-  **House as a System**
-  **Keep It:**
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  **Making it Work**

LEARNING OBJECTIVES

IDENTIFY at least four contaminants in the home and strategies to prevent, contain or control them.

DESCRIBE at least four ways that contaminants get into the home.

IDENTIFY at least three health effects and their associated contaminant.

CONTAMINANT BUYING DECISIONS

INTENTIONALLY BRING IN:

- Tobacco Smoke
- Pesticides
- Volatile Organic Comp.
- Mercury

SECONDHAND SMOKE

TOBACCO SPIKES IN PARTICLE LEVELS

Source: *Indoor Air Quality, Infiltration and Ventilation in Residential Buildings NYSERDA 1985 [5]*

WHY AVOID SECONDHAND SMOKE:

- Children's Health Effects
- Adult Health Effects
- 60% of US population has biological evidence of exposure

SMOKE-FREE HOME RULES: STATE PERFORMANCE

	1998- 1999	2003	2009- 2010	% Increase
Total	60%	72%	81%	33%
Max (state range)	81%	89%	93%	15%
Min (state range)	40%	53%	68%	70%

HEALTH EFFECTS IN CHILDREN

In children, second-hand smoke causes the following:

- Ear infections
- More frequent and severe asthma attacks
- Respiratory symptoms (for example, coughing, sneezing, and shortness of breath)
- Respiratory infections (bronchitis and pneumonia)
- A greater risk for sudden infant death syndrome (SIDS)

www.cdc.gov/tobacco/data_statistics/fact_sheets/secondhand_smoke/general_facts/index.htm

SMOKE-FREE HOUSING POLICIES

Smoke Free Saves Property Owners Money

The Monetary Impact

Cost to Rehabilitate a Unit Where Smoking is Prohibited vs. a Unit Where Smoking is Allowed

	Non-Smoking	Light Smoking	Heavy Smoking
General Cleaning	\$240	\$500	\$720
Paint	\$170	\$225	\$480
Flooring	\$50	\$950	\$1,425
Appliances	\$60	\$75	\$490
Bathroom	\$40	\$60	\$400
TOTAL	\$560	\$1,810	\$3,515

Data reflects surveys from housing authorities and subsidized housing facilities in New England.
Collected and reported by Smoke-Free Housing New England, 2009.

SMOKE-FREE HOUSING POLICIES

Other benefits

- Increases Demand
- Decrease Fires/Potential Insurance Discount
- Reduces Tenant Conflict

SMOKE-FREE HOUSING POLICY

- Policy Approaches
- Voluntary / Grassroots Efforts
- Low Income Housing Tax Credit
- Disclosure

- No later than Aug. 3, 2018, all public housing communities must implement a policy that bars the use of prohibited tobacco products in all public housing units, interior common areas, and outdoor areas within 25 feet of public housing and administrative office buildings. Prohibited tobacco products are defined as items that involve the ignition and burning of tobacco leaves, such as cigarettes, cigars, pipes, and water pipes (also known as hookahs).

SMOKING CESSATION PROGRAMS

- Smoke-free policies work best if coupled with cessation resources

VOLATILE ORGANIC COMPOUNDS

- Air Fresheners
- Cleaning Products
- Sprays & Coatings
- Formaldehyde
- Carpets
- Vinyl Floors
- Drywall
- Hobbies
- Home Maintenance

VOLATILE ORGANIC COMPOUNDS

Page
9.5

Concentration of VOC's can be **2-5 times greater** in the home.

During or immediately after paint stripping activities, VOC levels can be **1,000 times higher** than outdoors.

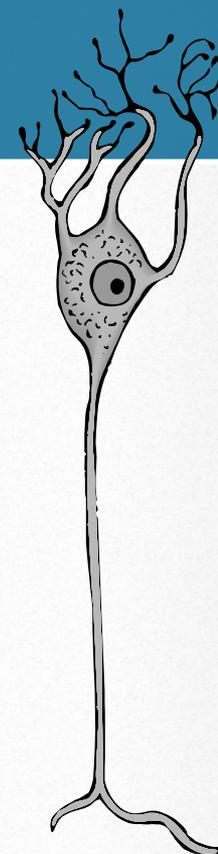

Paints, varnishes and glues may contain a variety of materials with potential health or nuisance effects. Use low VOC paints but with caution or use traditional paints with lots of ventilation.

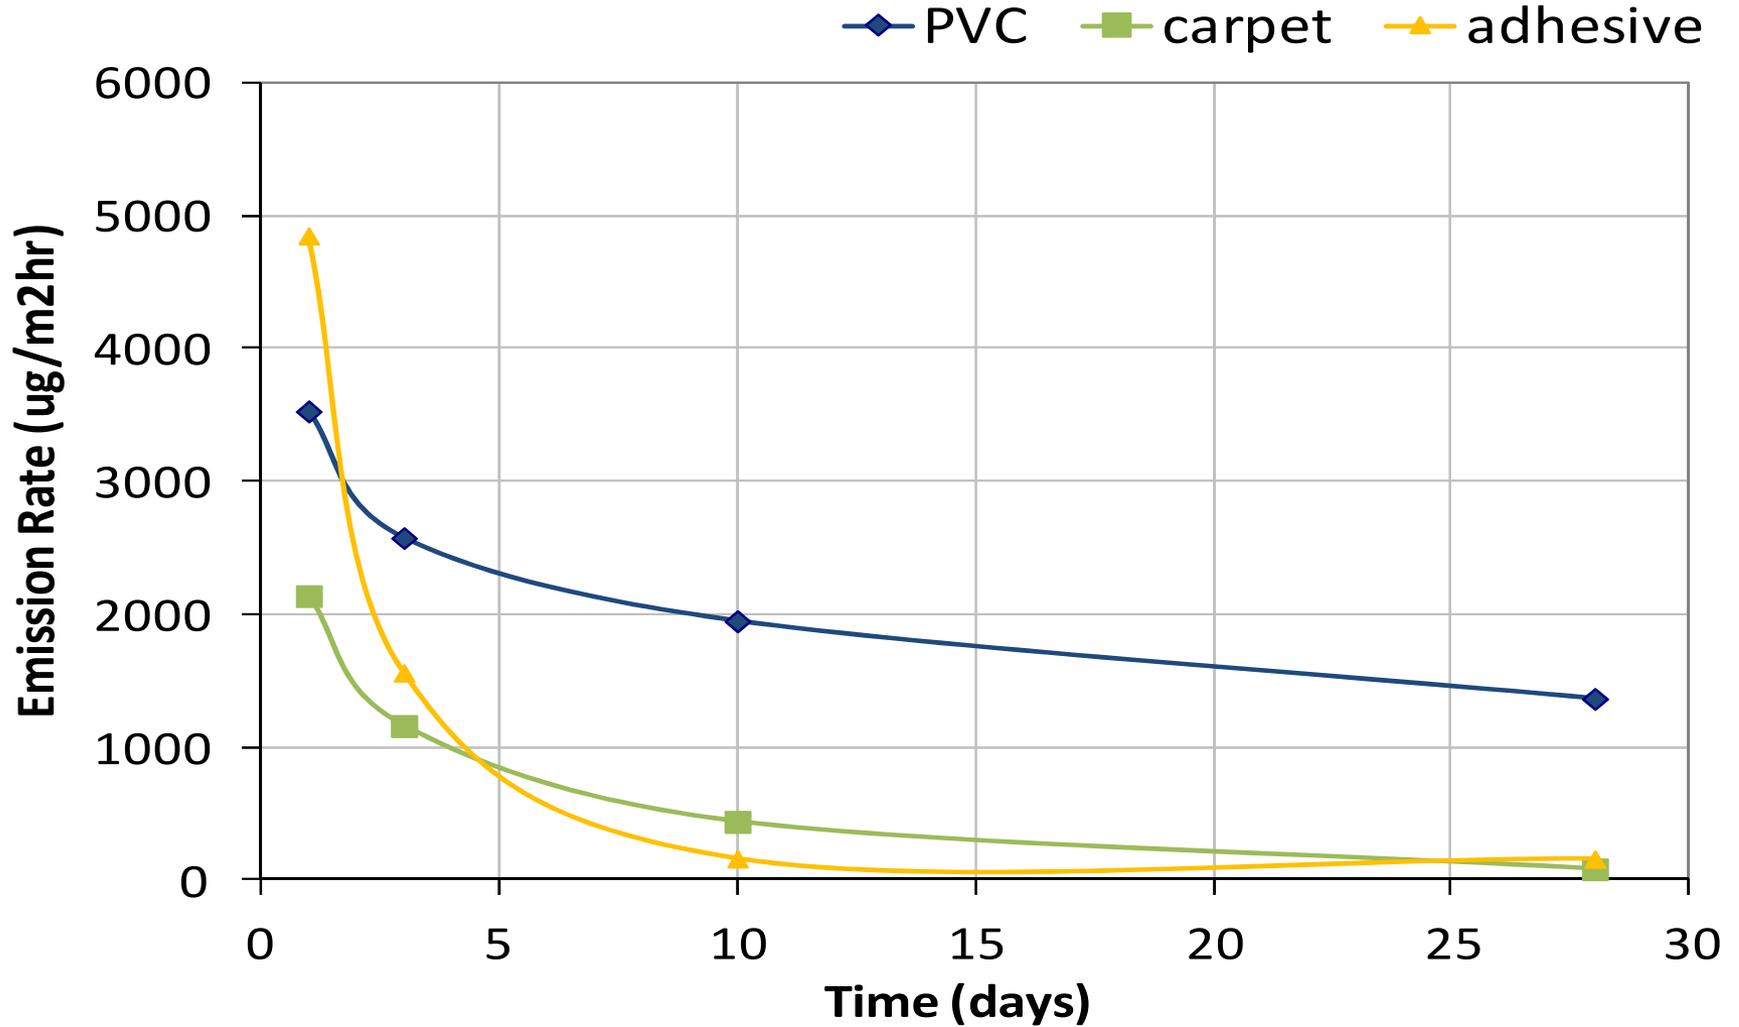

WHY AVOID VOCs?

Potential health effects of VOCs:

- Eye, nose, throat irritation
- Headaches, nausea, coordination
- Liver, kidney, and brain damage
- Some can cause cancers
- Child development

VOC- AND SVOC-EMISSIONS FROM ADHESIVES, FLOOR COVERINGS AND COMPLETE FLOOR STRUCTURES [12]

REDUCE POTENTIAL SOURCES

- Don't use it if you don't have to.
- Substitute a better product

STEPS TO CONTROL VOCs

Control the source

Store materials properly

Ventilate

THIRD-PARTY CERTIFICATIONS

- Phthalates from Vinyl Products
- Sulfur from Chinese Drywall
- Cadmium in Jewelry?

AND THEN WE HAVE METH LABS . . .

METH LABS

Health & Safety Hazards

Page

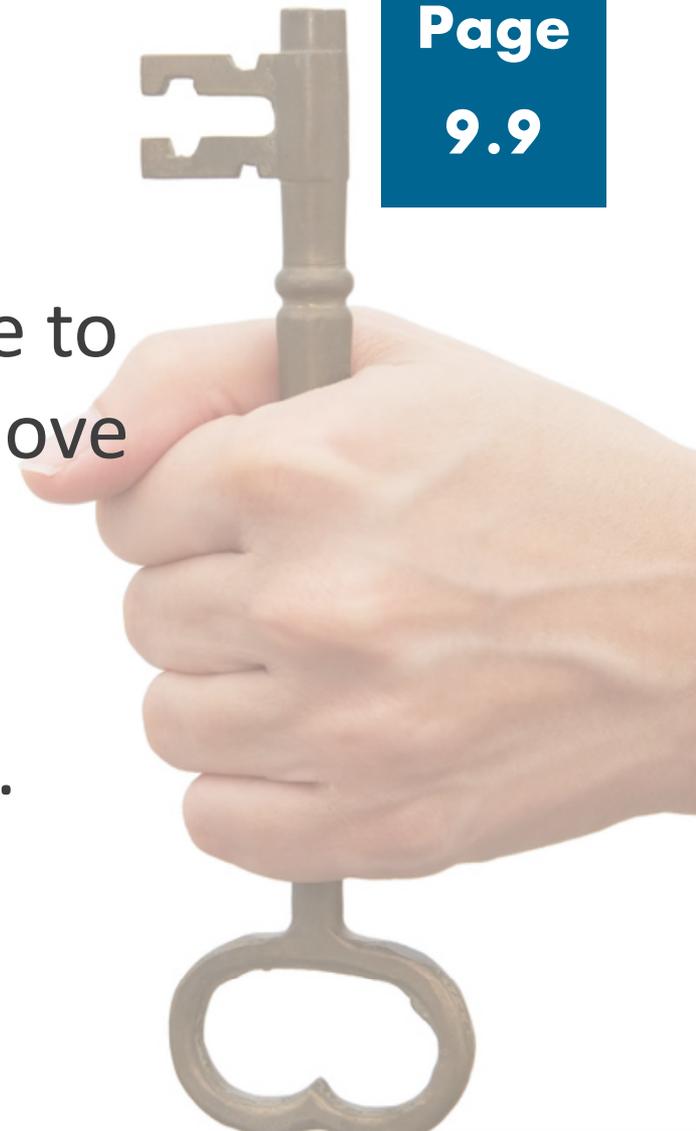

9.9

- Explosive
- Flammable
- Toxic
- Caustic

KEY MESSAGES

- It is easier to prevent exposure to contaminants than it is to remove them and treat their effects.
- Should contamination occur: control, contain, and clean-up.
- Contaminants are not always detectable by our senses.

LEARNING OBJECTIVES

IDENTIFY at least four contaminants in the home and strategies to prevent, contain or control them.

DESCRIBE at least four ways that contaminants get into the home.

IDENTIFY at least three health effects and their associated contaminant.

STEPS TO A HEALTHIER HOME

KEEP IT MAINTAINED

Start with People

House as a System

Keep It:

1. Dry

2. Clean

3. Pest-Free

4. Ventilated

5. Safe

6. Contaminant-Free

7. Maintained

Making it Work

LEARNING OBJECTIVES

Name at least three systems that require ongoing maintenance.

Identify two maintenance actions that require the use of a professional.

Name at least two health effects from lead.

Identify housing targeted by the RRP rule.

Describe the two ways to mitigate radon in a home.

CONTAMINANTS & MAINTENANCE

LEGACY TOXICS:

- Lead-Based Paint
- Asbestos
- Chromated Copper Arsenate Wood
- Mercury
- Pesticide Residues

CREATED OR GROWN:

- Cockroaches
- Mice and Rats
- Mold
- Carbon Monoxide
- Sewer Gas
- And Then There is Radon

MAINTENANCE

Solid Waste

Water supply

Sewer system

Heating/cooling/dehumidification/humidification

Cooking

Ventilation

Rainwater control/drainage

Structural integrity

Storage / Organization

MAINTENANCE ACTIONS

- Inspect
- Clean
- Lubricate
- Replace
- Repair
- Organize

How's the filter? A clogged low efficiency filter partially sucked out of the frame.

WHEN?

- On-going
- Seasonally
- Annually

National Center for Healthy Housing

Fact Sheet

Healthy Homes Maintenance Checklist

The following checklist was developed for the Healthy Homes Training Center and Network as a tool for healthy home maintenance. A healthy home is one that is constructed, maintained, and rehabilitated in a manner that is conducive to good occupant health.

To maintain a healthy home, occupants should keep it dry, clean, well-ventilated, free from contaminants, pest-free, safe and well-maintained. Good home maintenance can act to

reduce allergens, prevent illness, and reduce injury from accidents. This checklist provides basic guidelines; items may need to be checked more often depending on local conditions and manufacturer suggestions.

Developed for the National Healthy Homes Training Center by Terry Brennan and Ellen Tobin, technical advisors to the National Center for Healthy Housing.

	Spring	Fall	Annual	As Needed	Pro-Neighborhood
Yard and Exterior					
Water drains away from house	●				
No trip, fall, choking, sharp edge hazards	●	●			
Fence around pool intact	●	●			
Check for signs of rodents, bats, roaches, termites	●	●			
Drain outdoor faucets and hoses		●			
Clean window wells and check drainage	●	●			
Clean gutters and downspouts	●	●			
Basement and Crawlspace					
No wet surfaces, puddles	●	●			
Sump pump and check valve working	●	●			
Floor drain working	●				
Vacuum basement surfaces	●				
Check for signs of rodents, bats, roaches, termites		●			
Exterior Roof, Walls, Windows					
Shingles in good condition	●				
Check chimney, valley, plumbing vent, skylight flashing	●				
Make sure gutters discharge water away from building	●				
Check attic vents		●			
Check attic for signs of roof leaks	●				
Check for icicles and ice dams	●				
Look for peeling paint	●				
Look for signs of leaks where deck attaches to house	●				
Check below window & door that flashing intact	●				
Repair broken, cracked glass		●			
Look for signs of leaks at window and door sills	●				
Clean dryer vent	●	●			
Check exhaust ducts are clear	●	●			

HVAC Equipment - Replace Filters

	Spring	Fall	Annual	As Needed	Pro-Neighborhood
Warm air furnace (merv 8)			●		
Air conditioner (central air merv 8)	●				

Attic

	Spring	Fall	Annual	As Needed	Pro-Neighborhood

healthier

LEAD AND LEAD-BASED PAINT

Peeling, Chipping Paint / Deteriorated Paint

Dust

Soil

Drinking water

Consumer Products such Pottery, Cribs, Jewelry, Candle Wicks

Cultural Items

Contaminated Sites

WHY LEAD?

WHY AVOID LEAD?

- Reduced IQ
- Learning disabilities
- Impaired hearing
- Reduced attention spans, behavior problems
- Anemia
- Kidney damage
- Damage to central nervous system
- Coma, convulsions, death

*Peeling
paint
outside*

LEAD: AGE OF HOUSING MATTERS

Year House Was Built	Percent of Houses with Lead-Based Paint
Before 1940	87 percent
1940-1959	69 percent
1960-1978	24 percent
All US Housing Stock	40 percent

PREVALENCE OF DETERIORATED PAINT

2015 American Housing Survey

2.4%

*of homes have
broken plaster or
peeling paint*

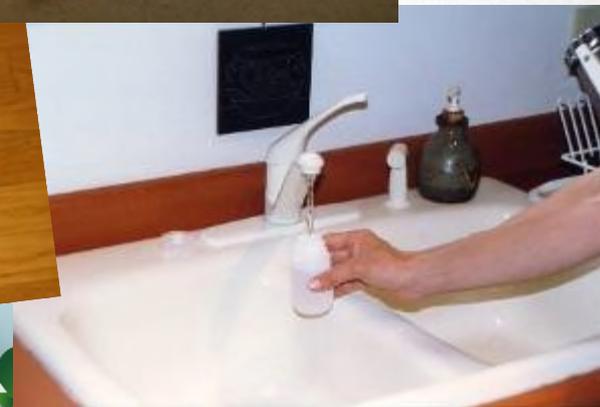

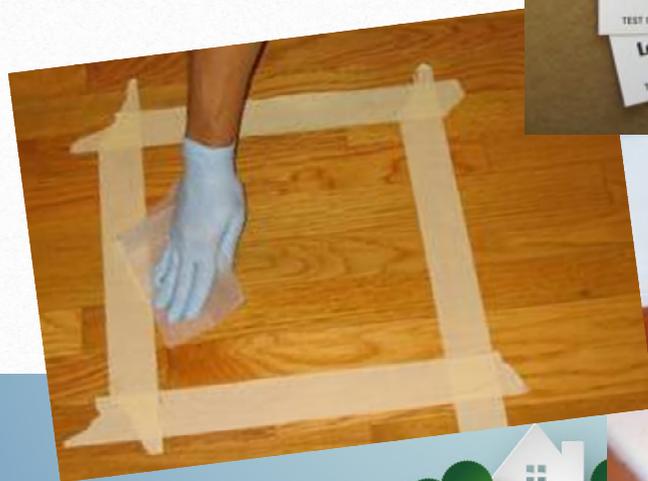

Conditions that Deteriorate Paint

- In past twelve months,
 - 8.5% of homes had interior water leakage
 - 9.9% of homes had exterior water leakage

AVAILABLE TESTING

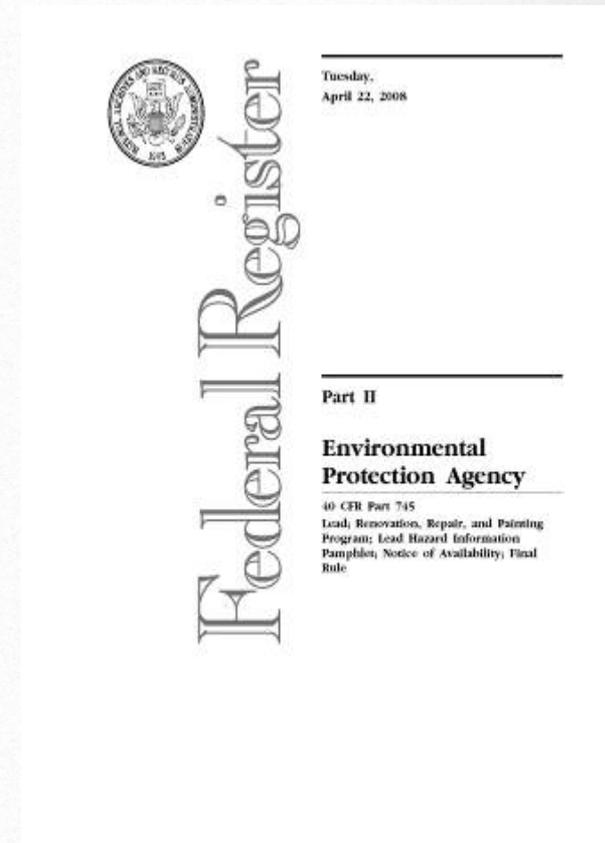

- Paint
- Dust - Clearance testing
- Bare soil
- Drinking water

EPA RRP RULE

Lead Renovation, Repair and Painting (RRP) Rule

- Effective April 22, 2010
- Pre-1978 housing (target or child-occupied)
- Triggers
- 40 CFR 745.80 to 745.91
- April 22, 2008 Federal Register

AUTHORIZED STATES TO IMPLEMENT THE RRP

14

States have been authorized to administer and enforce the RRP Rule.

1. Wisconsin
2. Iowa
3. North Carolina
4. Utah
5. Mississippi
6. Kansas
7. Rhode Island
8. Oregon
9. Massachusetts
10. Alabama
11. Washington
12. Georgia
13. Oklahoma
14. Delaware

IMPACTS OF RRP RULE

- 8.4 million renovation events annually
- Required certification of firms and individuals

WHY NOW?

- Final major rule from the Residential Lead-based Hazard Reduction Act of 1992
- Congress required rule to be finalized in 1996
- Still to come:
 - ◆ Public buildings built before 1978
 - ◆ Commercial buildings that create lead-based paint hazards

LEAD-BASED PAINT RULES

1970

1976 Toxic Substance Control Act (TSCA)

1978 U.S. Consumer Product Safety Commission bans the use of lead paint for residential use
OSHA general industry standard

1980

1992 **Title X (Residential Lead-Based Paint Hazard Reduction Act)**

OSHA addresses lead exposure in construction

1990

1996 Real Estate Notification and Disclosure Act (REND)
Lead-Based Paint Activities Regulation

2000

1999 HUD Lead-Safe Housing Rule
EPA Pre-Renovation Education Rule (PRE-rule)

2010

2008 Consumer Product Safety Improvement Act (CPSIA)
Renovation, Remodeling and Painting (RRP)*

**RRP took effect in 2010, revised in 2011*

Target Housing and
Child-occupied
Facilities

LEAD DISCLOSURE

- For property transfers
- For rentals

HOUSING CODE

Housing code provisions related to paint

304.2

- Protective treatment

304.6

- Exterior walls

305.3

- Interior surfaces

ASBESTOS

WHY AVOID ASBESTOS?

- Health effects:
 - Lung Cancer
 - Mesothelioma
 - Asbestosis
- Smokers are at greater risk!

HOW TO HANDLE ASBESTOS

- LEAVE IT ALONE (if in good condition).
- Look for signs of wear or damage - avoid touching.
- If damaged or renovation might disturb it, repair or remove by licensed professional.

VERMICULITE

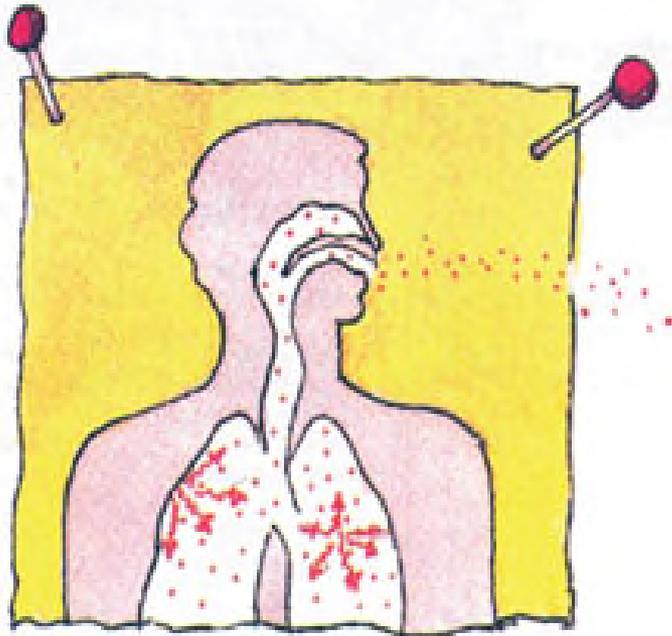

ASBESTOS REGULATIONS

- National Emission Standard for Hazardous Air Pollutant (NESHAP)
- Model Asbestos Program for States
- EPA's Ban on Asbestos in Products Reversed in 1992
- OSHA standards for workers

RADON

A Serious Health Concern

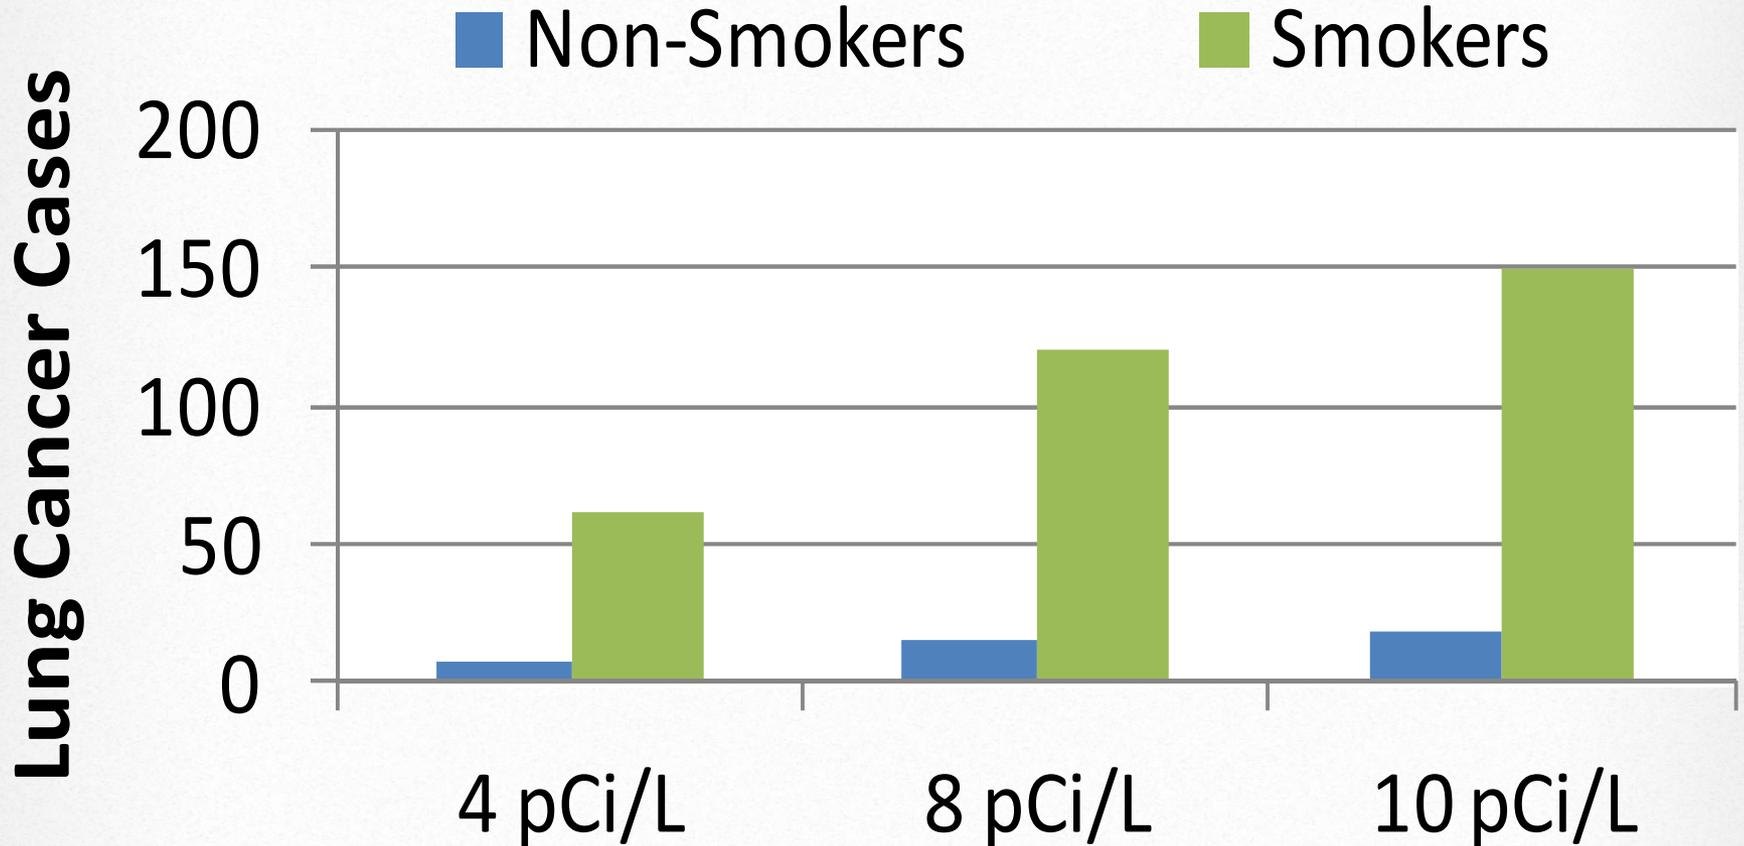

Naturally occurring gas

2nd leading cause of lung cancer after smoking

Leading cause of lung cancer in nonsmokers and people who have never smoked.

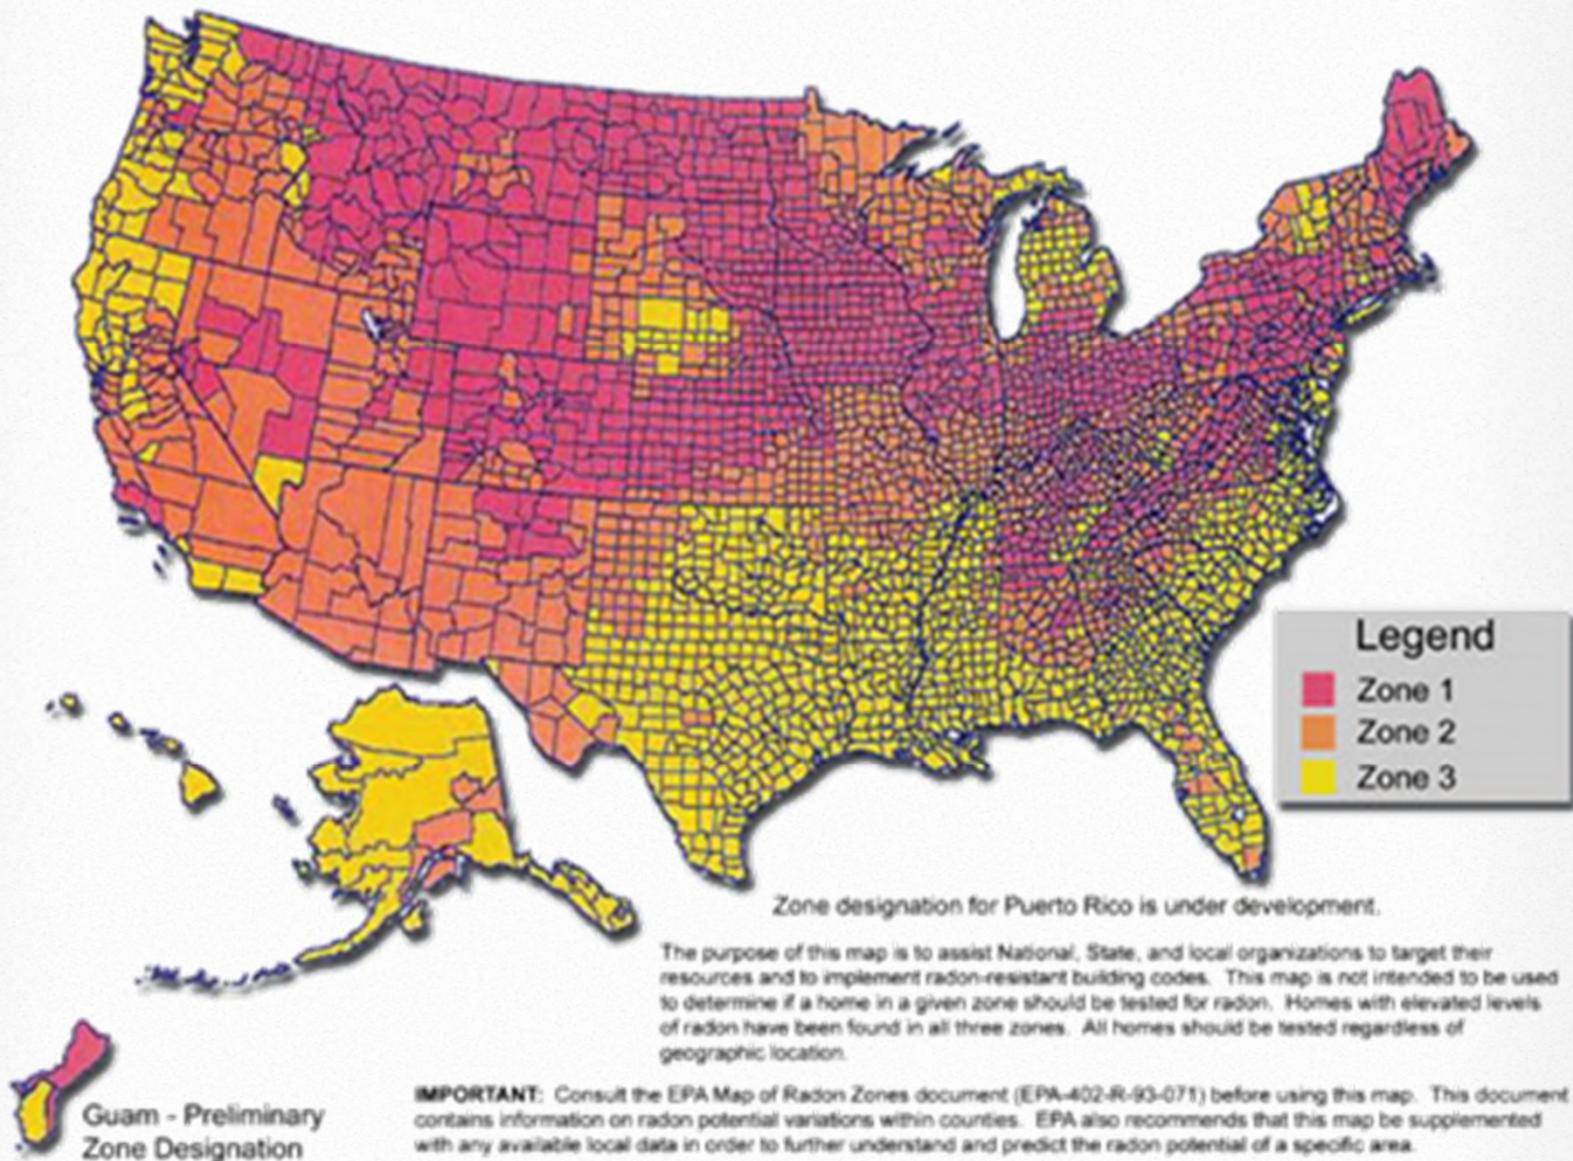

ESTIMATED LUNG CANCER CASES IN A POPULATION OF 1,000

Radon Exposure

EPA Map of Radon Zones

HOW RADON GETS INTO A HOME

- ✓ Cracks in solid floors
- ✓ Construction joints
- ✓ Cracks in walls
- ✓ Gaps in suspended floors
- ✓ Gaps around service pipes
- ✓ Cavities inside walls
- ✓ Other openings
- ✓ Water supply

TESTING FOR RADON

Short
Term

Long
Term

If result is 4
pCi/L or higher
take a follow-
up test OR fix
the home

TESTING FOR RADON

Testing Options:

- Kits
- Hire a professional

Radon Data Card
(Write Comments on Back)

In order to Analyze test, all information must be filled out completely.
(Please Print) Please Enter Radon Unit Serial No.'s (A) 20078

WASHINGTON, DC 20002

ATTN: RECLP

INTERPRETING RADON RESULTS

Short term test > 4 pCi/L

- Take second short term test or long term test

Short term average or long term test >4 pCi/L

- Fix home for radon

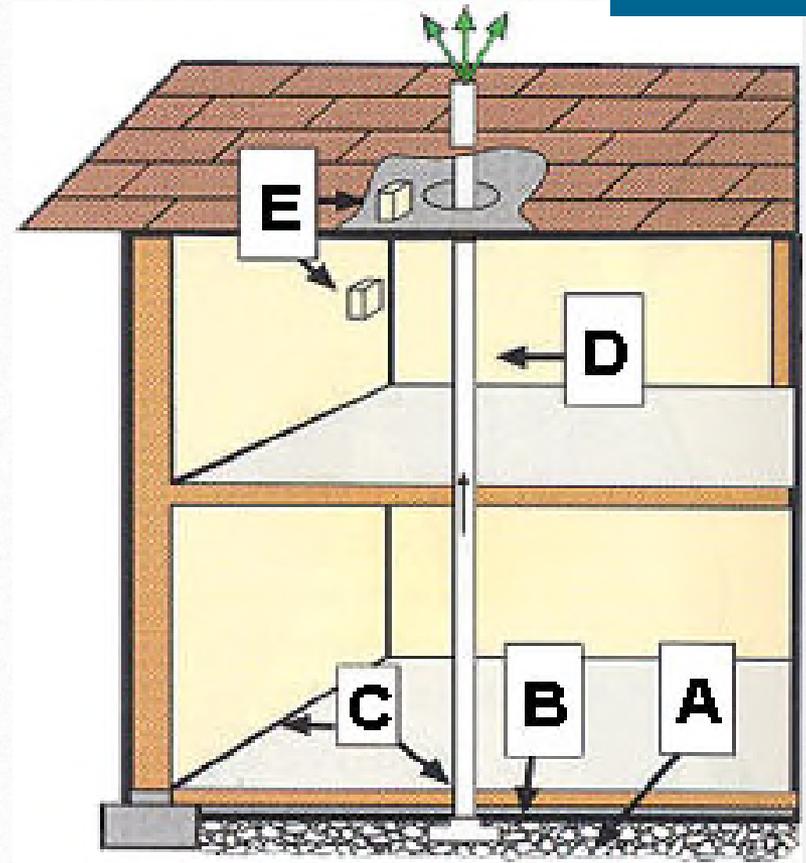

RADON REDUCTION SYSTEMS

- New Construction
- Existing Housing

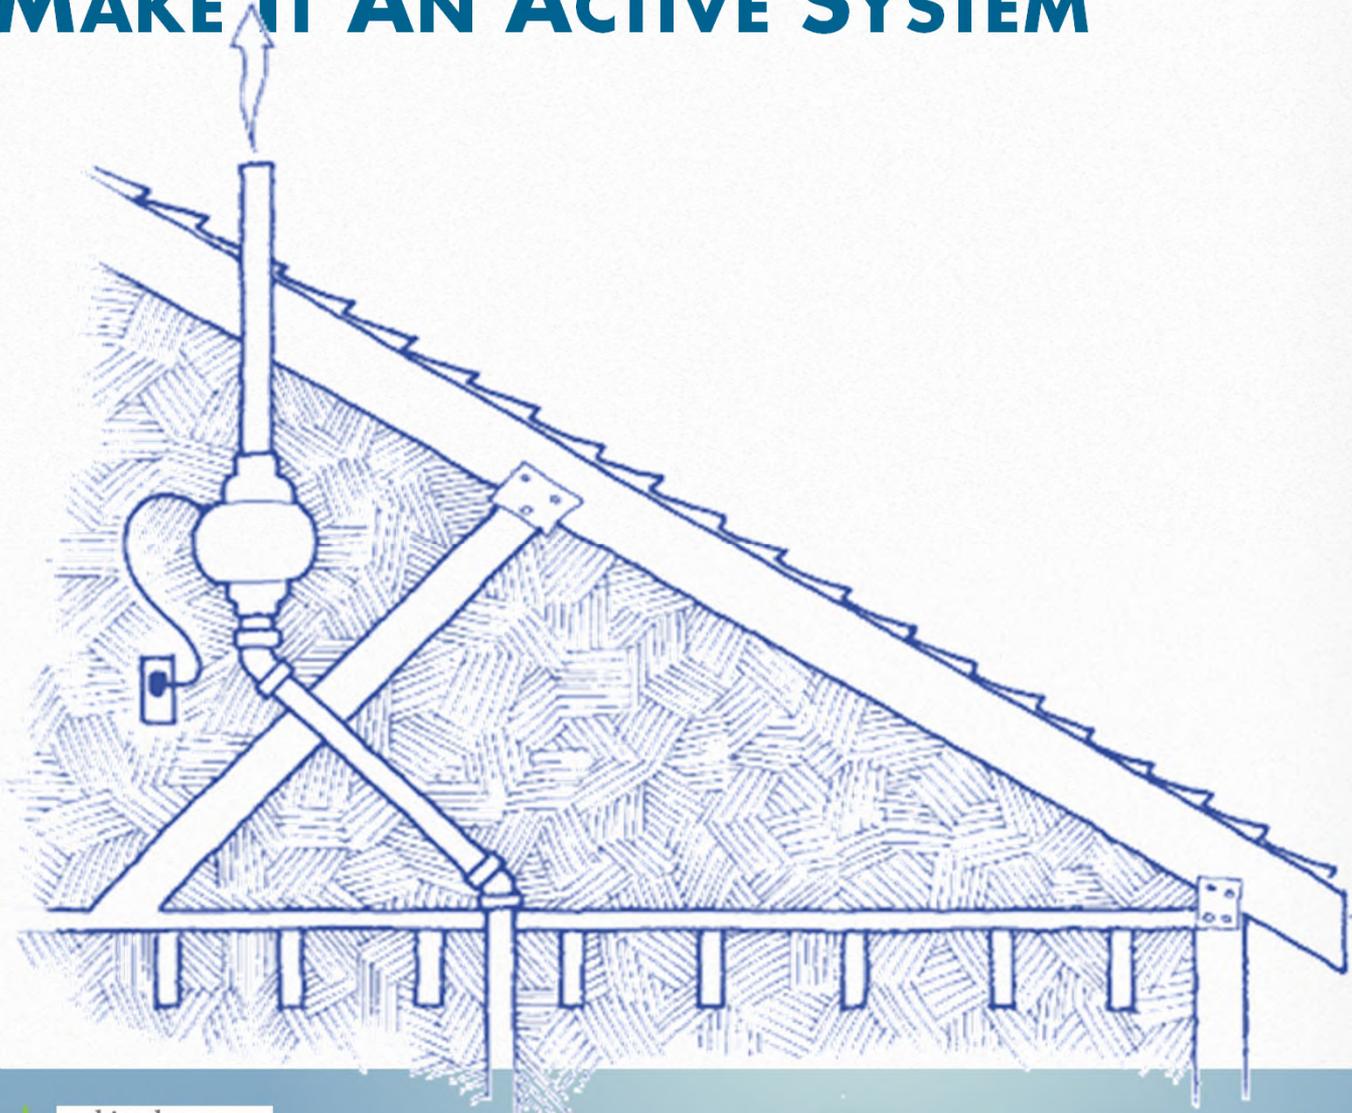

PASSIVE SUB-SLAB DEPRESSURIZATION SYSTEM (NEW CONSTRUCTION)

- A.** • Gas-Permeable Layer
- B.** • Plastic Sheeting
- C.** • Seal and Caulk
- D.** • Vent Pipe
- E.** • Junction Boxes

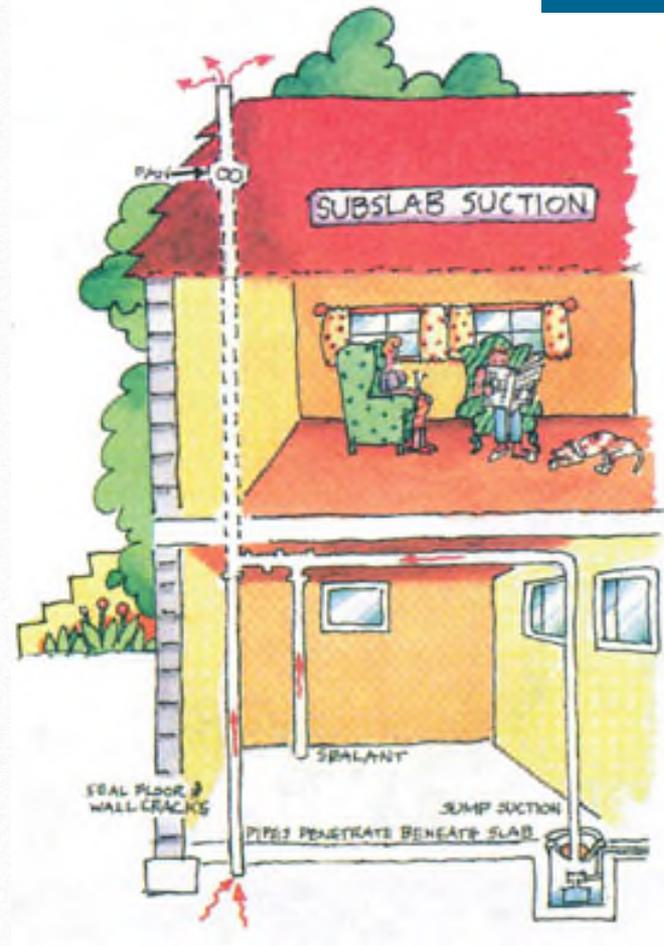

FANS MAKE IT AN ACTIVE SYSTEM

RADON FIXES

Existing Housing

- ✓ Seal floor and cracks
- ✓ Vent from below slab
- ✓ Fan sucks air – active system
- ✓ Sump suction reduces entry

LABEL RADON SYSTEMS

RADON MITIGATION COSTS

	Average Costs
New Construction	
Passive only	\$350 - \$500
Active system	\$650 - \$800
Existing Homes	\$800-\$2,500

SEWER GAS

- Mixture of gases
- Source

KEY MESSAGES

- Systems should be inspected regularly to ensure proper function.
- Some maintenance activities require the use of professionals.
- Lead causes a variety of serious health effects.
- Contractors doing renovation should be certified to work on houses with lead paint.
- Deteriorating products or areas with asbestos need to be addressed by a certified professional.
- There are two ways to address high radon levels in a home.

LEARNING OBJECTIVES

Name at least three systems that require ongoing maintenance.

Identify two maintenance actions that require the use of a professional.

Name at least two health effects from lead.

Identify housing targeted by the RRP rule.

Describe the two ways to mitigate radon in a home.

Steps to a Healthier Home

KEEP IT CLIMATE CONTROLLED

-  **Start with People**
-  **House as a System**
-  **Keep It:**
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  **Making it Work**

Climate-Control Systems:

- Heating
- Cooling
- Ventilation
- Think of the house as a System

WHAT ARE THE HEALTH AND SAFETY RISKS?

Increased risk from exposure to extreme cold and heat

Exacerbate asthma, mold and other indoor pollution

General discomfort

High monthly utility bills

We Have Systems To:

- Add heat
- Remove heat
- Ventilate
- Add or remove humidity

HEATING SYSTEMS

- Fuel
 - ◆ Gas (natural or LP), oil, wood, coal
 - ◆ Electric
- Distribution
 - ◆ Hot water, steam, warm air
 - ◆ Radiators, baseboard, ducts, space heaters
 - ◆ Radiant floors and ceilings
- Chimneys, sealed combustion, fan powered
- Temperature Controls

Mechanical Ventilation

All exhaust appliances
“suck” air.

Photos courtesy of The US Department of Energy

Occupant Factors

(The ways we do the things we do)

- Water Usage
- Cooking & Storing Food
- Cleanliness
- Systems Operation
- Maintenance
- Tolerance For Pests
- Lighting, Appliances

These Systems Must Work-Together

- Combustion Appliances
 - ◆ Heating systems
 - ◆ Water heaters
 - ◆ Gas range
- Exhaust Fans & Clothes Dryers
- Building Shell features
 - ◆ Type and quality of construction
 - ◆ Insulation & air sealing
 - ◆ Fenestration: Windows, doors, skylights
- Occupants

MEASURING THERMAL COMFORT

INFRARED THERMOMETER

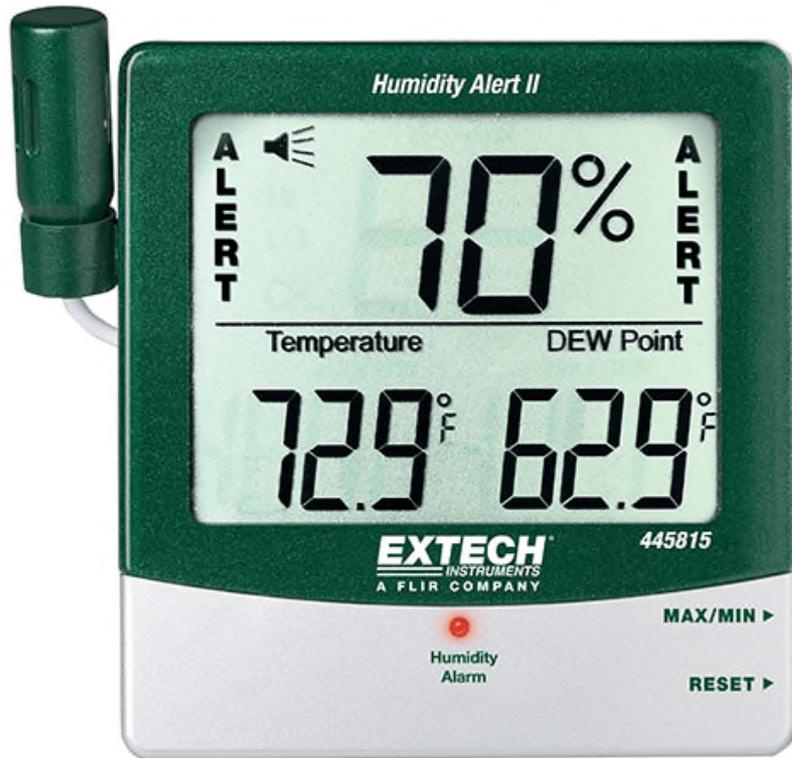

Extech Mini Infrared
Thermometer - (8:1) - \$70

- Affordable thermal infrared “camera”
- ~\$60 - \$250
- Instantaneous, digital reading
- Helps to identify materials that are moist (since condensation of moisture results in cooling)

MEASURING THERMAL COMFORT

HYGRO-THERMOMETER

- Measures:
 - Temperature
 - Humidity
 - Calculated Dew Point
- Can be used with Laser Thermometer to locate potential sites for condensation

Extech Hygro-Thermometer - \$50

HOME ENERGY AUDIT

- A home energy audit can suggest strategies that a family can implement to find a healthy compromise to temperature and humidity levels that meet the needs of all their family members
- See www.energy.gov/energysaver for more information.

Steps to a Healthier Home

MAKING IT WORK

Start with People

House as a System

Keep It:

1. Dry

2. Clean

3. Pest-Free

4. Ventilated

5. Safe

6. Contaminant-Free

7. Maintained

Making it Work

LEARNING OBJECTIVES

- **NAME** two provisions of a code that could be used to cite a hazard in the home.
- **EXPLAIN** why partnership with the community is essential.
- **IDENTIFY** five important players involved in healthy homes issues.
- **EXPLAIN** why data collection and analysis are important in delivering healthy housing services.
- **IDENTIFY** three sources of data and where to find them.
- **LIST** two things that you might observe that must be reported and two that are discretionary.

CREATE

Creating a Healthy Homes Program

Successful healthy home projects need:

- Established objectives
- Administrative infrastructure
- Identified and committed partners
- Secured funding
- Sustainability plan

IMPLEMENT

Implementing a Healthy Homes Program

Issues to consider:

- Job descriptions
- Training program
- Programmatic changes

FUNDING SOURCES

Healthy Homes funding sources

- HUD
- Rental licensing fees or taxes
- EPA
- State & City

OTHER FUNDING

- Public agencies can provide “seed” money
- Involve private sector foundations

HEALTH AND HOUSING

Benefits to collaboration

- Long-term success
- Long-term community capacity
- Empower members
- Produce change

IMPORTANT PLAYERS

- Agencies
- Community-Based Organizations
- Property Owners
- Contractors and trades people
- Families
- Others?

AGENCIES

- **Other local agencies regularly enter homes**
- **Consider coordinating services at single home visit.**

COMMUNITY-BASED ORGANIZATIONS

- Solicit input
- Attend community functions
- Consider interests and priorities
- Involve community members

PROPERTY OWNERS

- Involve in initial program plan
- Secure participation
- Conduct work at turnover
- Require prerequisite work
- Offer training
- Stress maintenance

CONTRACTORS & TRADES PEOPLE

- Involve in developing work protocols
- Offer to train and equip
- Encourage quality of work standards
- Meet regularly
- Help contractors market

FAMILIES

- Always have avenues for the family to become involved
- Provide program materials
- Educate at organizational meetings or “kitchen meetings”

CHALLENGES

Health & Housing Collaborations

- Different visions
- May speak “different languages”
- Many players
- Agency culture
- Power inequities
- “Bad” history
- Competition for funding
- Lack of resources, or unbalanced distribution of resources

Making it Work

USING INFORMATION TO BUILD & IMPROVE PROGRAM

making homes
healthier

WHY COLLECT INFORMATION?

- Determine the magnitude of the problem & community characteristics

WHY COLLECT INFORMATION?

- Establish a baseline
- Evaluate your program
- Make decisions about strategies

GATHERING DATA

Demographic/Socioeconomic

Housing

Health

Environment

VISUAL ASSESSMENT TOOLS

- Local Tools
- CDC/HUD Housing Inspection Manual
- Community Environmental Health Resource Center (CEHRC) Visual Survey

EXERCISE #9

- Conduct a Visual Survey and Assessment of Potential Code Violations
- Use CEHRC Visual Survey as Template
- Use IPMC as Model Code

Visual Survey Report

Resident: _____
 Alternate Contact: _____
 Address: _____
 Unit # _____ Unique ID _____

Essentials for Healthy Homes Practitioners
Exercise #9 – Practice Visual Assessment & Identify Potential Violations

Step 3: Evaluate CEHRC Visual Survey

Three Strengths:

- 1.
- 2.
- 3.

Three Weaknesses:

- 1.
- 2.
- 3.

Sampling Results Report

Resident: _____

Address: _____

Unit #: _____ Unique ID _____

Resident Phone: _____

Notes: _____

Record of Contact	First Visit	Second Visit	Meeting to Discuss Results
Hazard Investigator			
Resident or Designee			
Date & time			

Hazard	Hazard Checked	Number of Samples	Results of Sampling		Guideline or Standard	Unit of Measure
			Location	Result		
Average Lead Dust	Floor				≥ 40	Micrograms of lead per square foot of sample area (µg/ft ²); home-wide average
	Window Sill				≥ 250	
Maximum Lead Dust	Floor				≥ 40	Micrograms of lead per square foot (µg/ft ²); highest level found in the home
	Window Sill				≥ 250	
Lead in Paint					≥ 0.5% by weight	Percentage of lead in paint; maximum level found in the home
Lead in Soil	Play Area				≥ 400	Parts per million of lead in soil (ppm); maximum level in a play area
	Drip Line				≥ 1200	Parts per million of lead in soil; average for drip line and other non-play areas
	Other Area					
Cockroaches					None	Highest infestation category
						Cockroaches per trap per night
Radon					≥ 4	Picocuries of radon per liter of air

Prepared by: _____

Name (printed)

Signature: _____

Date: _____

Test results noted on this report do not necessarily show all possible health hazards in this home. For example, lead test results are from samples collected in some areas, not the inspection of all painted surfaces.

CEHRC: Community Environmental Health Resource Center
Revised 3/04

www.cehrc.org

Making it Work

LEGAL ISSUES: CONFIDENTIALITY, DISCLOSURE, AND LIABILITY

making homes
healthier

CONFIDENTIALITY

Community workers and government employees need to balance the privacy rights of people they work with and the obligation to protect the health and safety of others

WHAT INFORMATION IS CONFIDENTIAL?

- Protected under law
- Defined as confidential under agency or state policy
- “Sensitive” to the home occupants

LIKELY SENSITIVE

- Use of addictive products
- Illegal conduct
- Mental health
- Personal hygiene
- Medication
- Health conditions
- Symptoms
- Citizenship

USUALLY NOT SENSITIVE

- Occupation
- Birth date/age
- Race/ethnicity
- Gender
- Organizational affiliation
- Home address

CONFIDENTIAL

CHILD PROTECTIVE SERVICES

Mandated Reporting

- Young children home alone
- Active physical abuse, or evidence of abuse
- Drug activity may not be considered a condition that endangers

DISCRETIONARY REPORTING

- To whom do you report?
- What do you report?
- When?

REPORTING

Conditions to report to both property owner and tenant

- Lack of smoke alarms
- Structural defects that may cause an injury
- Sewage intrusion
- Vermin infestation
- Peeling/ deteriorated paint in homes older than 1978
- Sample results, if taken (lead, radon)
- Lack of window guards in high rise
- Any other immediate hazards found
- Hot water heater temperature, especially if multifamily

“RULES OF THUMB”

Information collection and reporting

- Only what you need to know
- Partnerships may be beneficial
- Know which laws apply
- Disclose code violations to the owner
- Don't disclose sensitive information

“RULES OF THUMB”

Legal issues and liability

- Follow laws
- Exercise caution when making recommendations for home treatments
- Recommend professionals when needed
- Use applicable standards when available

LIABILITY EXPOSURES

Healthy Homes Practitioners

- Multiple sources and types of exposures
- Limited research and data
- Lack of clear standards and guidelines
- Testing methods and controls

KEY MESSAGES

- The community must be engaged in achieving HH goals.
- The holistic approach requires coordination and collaboration among all programs sending staff in the home.
- Data are essential to identify the problem, determine the magnitude, develop an intervention and measure success.
- Healthy homes practitioners need to be aware of legal and ethical issues in their own communities.

LEARNING OBJECTIVES

- **NAME** two provisions of a code that could be used to cite a hazard in the home.
- **EXPLAIN** why partnership with the community is essential.
- **IDENTIFY** five important players involved in healthy homes issues.
- **EXPLAIN** why data collection and analysis are important in delivering healthy housing services.
- **IDENTIFY** three sources of data and where to find them.
- **LIST** two things that you might observe that must be reported and two that are discretionary.

CHANGES TO AHS DATA FOR 2015

- Click on the link below to bring up the American Housing Survey Table Creator. You can view national and metro area data.
- https://www.census.gov/programs-surveys/ahs/data/interactive/ahstablecreator.html?s_areas=a00000&s_year=n2015&s_tableName=TableS03&s_byGroup1=a1&s_byGroup2=a1&s_filterGroup1=t1&s_filterGroup2=g1.
- To see housing quality for all occupied units: total, owner, and renter:
 1. In the Select Area dropdown box, choose your Metro Area.
 2. In the Select Year dropdown box, choose 2015. Note that out of 41 metro areas, 16 have 2013 data, all the rest have 2015 data. For those, you can only select 2013 in the dropdown box.
 3. In the Select Table dropdown box, choose Housing Quality
 4. In the Variable 1 dropdown box, choose Tenure.

You can still go to Solutions' webpage for AHS data from 2011. But the new link takes the place of using the AHS data on Solutions' website since we will no longer be updating that site due to the changes in the way the data is presented.

Students will receive two handouts showing housing quality for their local area and housing quality from the national area.

**NOTE: This is a hidden slide.
It is provided for trainer reference only
and does not display as part of the slideshow.**

NATIONAL HEALTHY HOMES
TRAINING CENTER™
& NETWORK

Healthy Housing
Solutions Inc.

ESSENTIALS FOR HEALTHY HOMES PRACTITIONER COURSE

LEARNING OBJECTIVES

Describe four housing conditions and their associated health problems.

Identify three populations at higher risk for housing related disease and injury.

Identify three types of codes used to enforce remediation of housing-related hazards.

LINK BETWEEN HOUSING & HEALTH

“The connection between health and the dwelling of the population is one of the most important that exists.”

Florence Nightingale

WHY DO WE CARE?

- **Housing impact on health:**
 - ◆ Physical, chemical, biological exposures
 - ◆ Psychological
- **Young children spend about 70% of the time in their home.**

WHY DO WE CARE?

- Annual costs for environmentally attributable childhood diseases in the U.S: \$76.6 billion.
 - ◆ Lead poisoning cost \$50.9 billion
 - ◆ Neurobehavioral disorders cost \$23.4 billion
 - ◆ Asthma cost \$2.2 billion
 - ◆ Childhood cancer cost \$95.0 million

HOW SIGNIFICANT IS THE PROBLEM?

<i>American Housing Survey</i>			
Occupied Housing Units	Severe Physical Problems	Moderate Physical Problems	Total
2007	1.8 million	4.0 million	5.8 million
2009	1.9 million	3.9 million	5.8 million
2011	2.1 million	4.2 million	6.3 million
2013	1.9 million	3.9 million	5.8 million
2015	1.5 million	5.2 million	6.7 million

MASLOW'S HIERARCHY OF NEED

Home is where
the heart is.
Pliny

It may be frail; its roof may shake;
the wind may blow through it; the
storms may enter; the rain may enter
– but the King of England cannot
enter; all his forces dare not cross the
threshold of the ruined tenement.

William Pitt

One of our deepest
needs is to be at home.

Timothy Radcliffe

Where thou art,
that is home.

Emily Dickinson

Home is the place where,
when you have to go there,
They have to take you in.

Robert Frost

The strength of a nation derives
from the integrity of the home.

Confucius

There's no place like home.

Dorothy, Wizard of Oz

He is happiest, be he king or peasant,
who finds peace in his home.

Johann Wolfgang von Goethe

MORE RECENT EVIDENCE – ASTHMA AND RODENTS

Association between asthma and rats

Rat allergen sensitization and exposure are associated with increased asthma morbidity in inner-city children.

2003 study

Association between asthma and mice

In mouse-sensitized inner-city children, exposure to mouse allergen may be an important cause of asthma morbidity.

2006 study

MORE RECENT EVIDENCE – DAMPNES AND MOLD

Health Condition	Original Association Status	New Association Status
Asthma exacerbation	Sufficient evidence	No change
Asthma development	Limited or suggestive evidence	Sufficient evidence
Current asthma	Not evaluated in 2004	Sufficient evidence
Respiratory infections	Not evaluated in 2004	Sufficient evidence
Upper respiratory tract symptoms, cough and wheeze	Sufficient evidence	No change
Shortness of breath	Limited or suggestive evidence	Sufficient evidence
Hypersensitivity pneumonitis	Sufficient evidence	No change

MORE RECENT EVIDENCE – DAMPNES AND MOLD

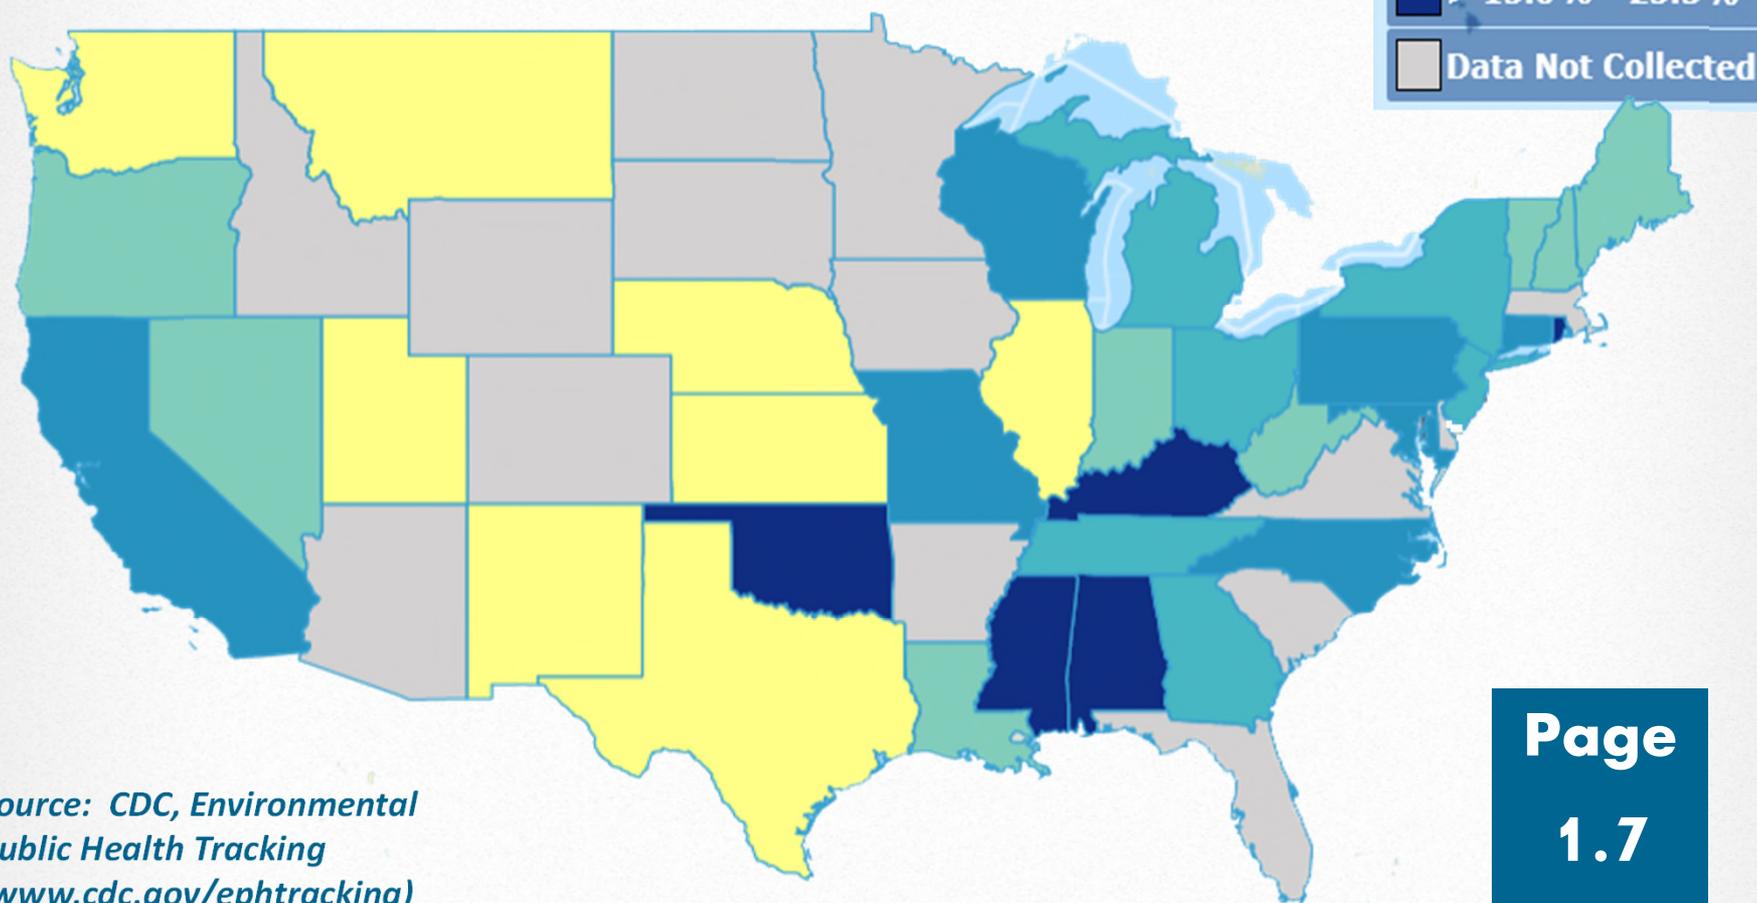

(CONTINUED)

Health Condition	Original Association Status	New Association Status
Humidifier and inhalation fevers	Limited or suggestive evidence	Sufficient evidence
Allergic rhinitis and bronchitis	NA	Limited or suggestive evidence
Lung function, allergy or atopy, and “asthma, ever”	NA	Inadequate or Insufficient Evidence to Determine Whether or Not an Association Exists

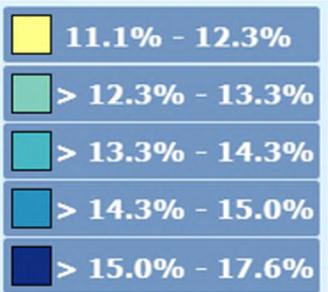

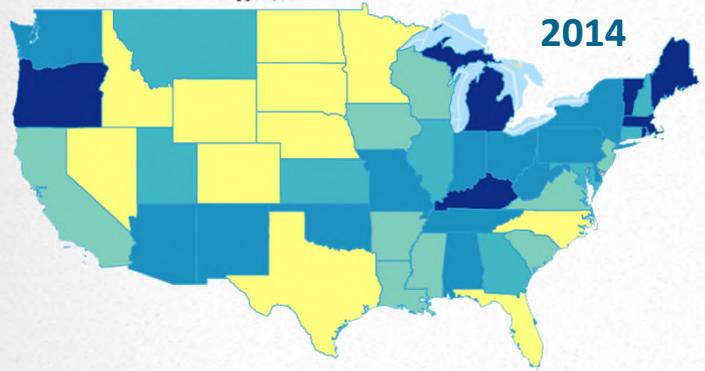

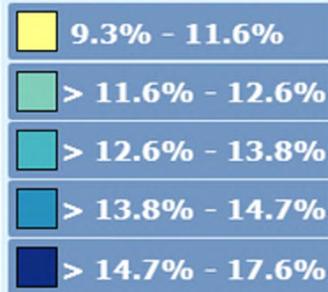

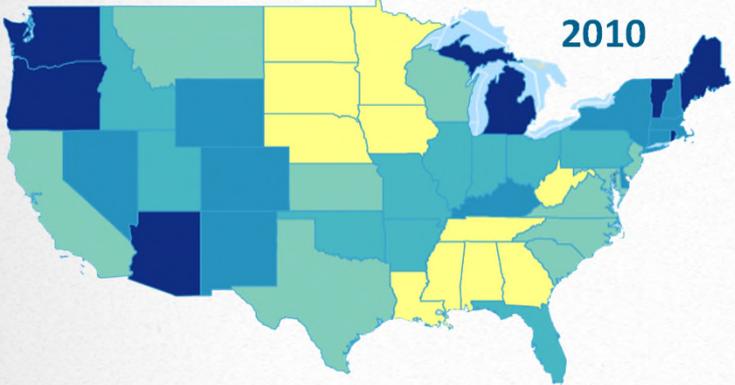

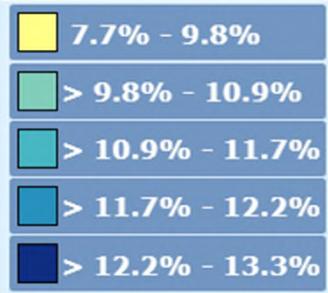

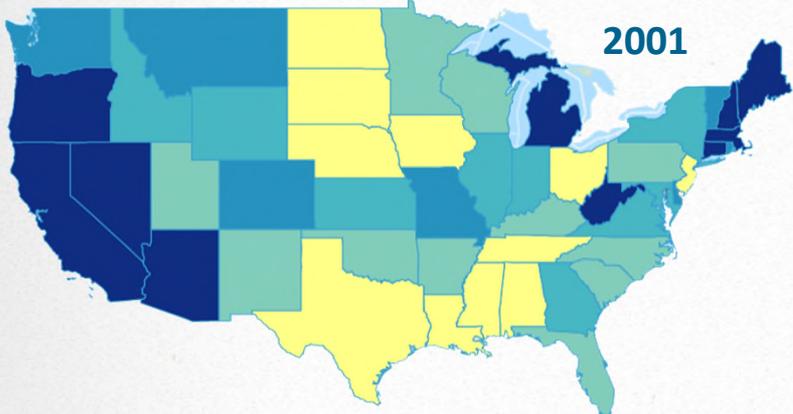

CHILDHOOD ASTHMA

Asthma Prevalence Among Children 2014 - BRFSS data

ADULT ASTHMA — CURRENT PREVALENCE OVER TIME

Current asthma prevalence among adults varies across states.

EXERCISE #1

Health Impacts

Housing Hazards

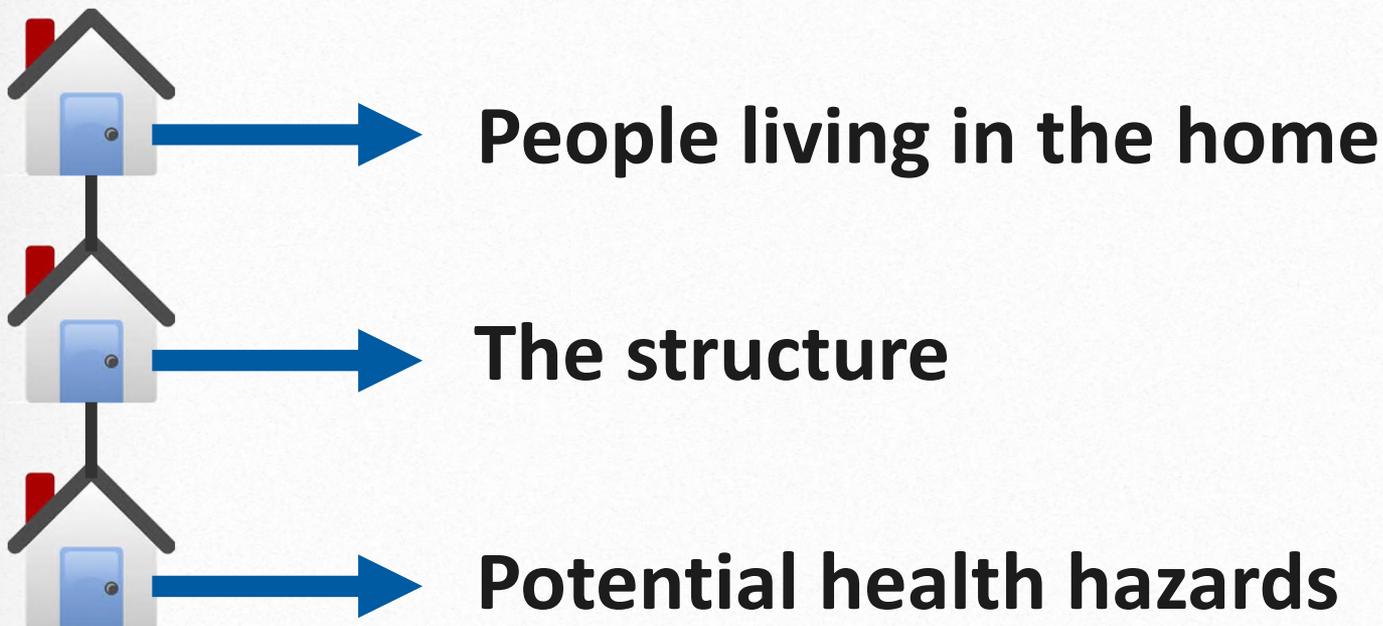

Corrective Action

Resources

HOLISTIC APPROACH

Integrated approach that considers:

Moisture/water intrusion

Mold

Asthma exacerbation

Why a Holistic Approach?

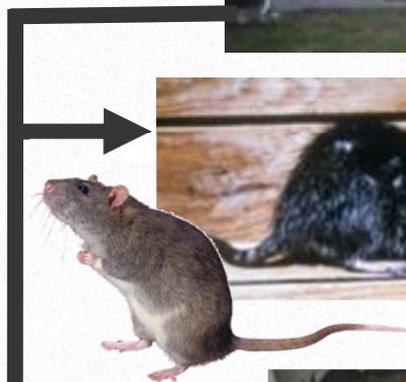

Moisture/
water intrusion

Structural damage

Structural
damage

Pests

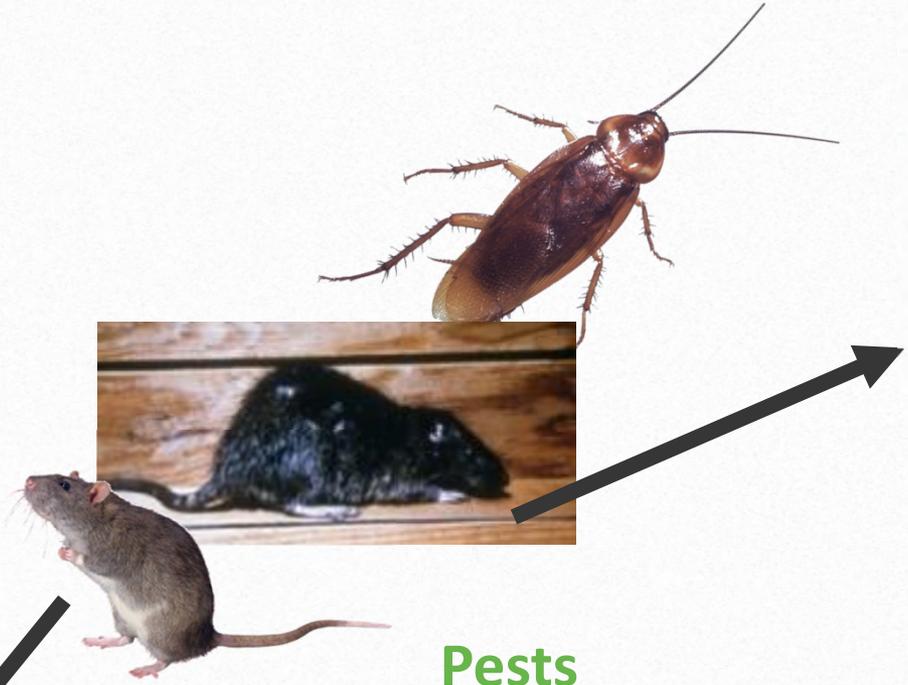

Deteriorated lead paint/
lead poisoning

Fire

Injuries

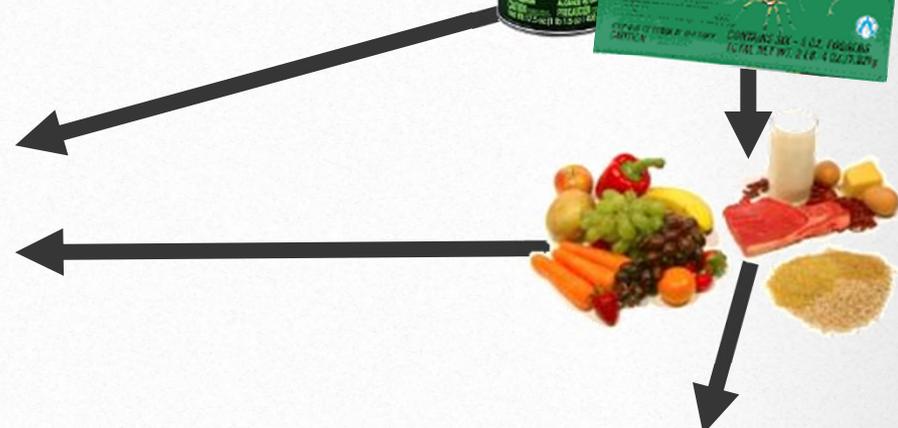

Pesticides

Pests

Asthma & allergy
exacerbation

Pesticides

DIFFERENT APPROACHES

HEALTH

- Primary Prevention
- Secondary Prevention
- Epidemiologic Triangle

HOUSING

- Well constructed
- Well maintained
- Comfortable
- Affordable
- Healthy

ENVIRONMENTAL HEALTH

Lead
Radon
Allergens/asthma
Combustion products
Unintentional Injuries
Insects & Rodents
Mold & Moisture
Pesticides
Asbestos

HEALTHY HOMES PRINCIPLES

Page
1.10

11

Keep It:

1. Dry

2. Clean

3. Pest-Free

4. Ventilated

5. Safe

6. Contaminant-Free

7. Maintained

8. Climate Controlled

WHAT IS HEALTHY HOUSING?

Page

1.11

Healthy
Housing is:

- Designed,
- Constructed,
- Maintained, and
- Rehabilitated

in a manner that is conducive to
good occupant health.

Conducted:

- Every two years since the 1980s
- Periodically for 47 Metropolitan Statistical Areas (MSA)
- Consistent set of homes
- Phone survey since 1997

Essentials for Healthy Homes Practitioners
Exercise #2 – Get a Handle on Healthy Homes Statistics

EXERCISE #2

Write the number for each characteristic.

- _____ # of homes with severe physical problems (note that units are thousands of homes)
- _____ # of homes with moderate physical problems
- _____ # of homes with either severe or moderate problems
- _____ % of homes with exterior water leakage in past 12 months
- _____ % of homes with interior water leakage in past 12 months
- _____ % of homes with signs of mice in past 3 months
- _____ % of rental homes built before 1980
- _____ % of homes with warm-air furnaces
- _____ % of homes with a clothes dryer fueled by gas (piped or LP)
- _____ % of renters rating their home a 1 or 2 (where 1 as worst possible and 10 as best possible)

Checkmark the most common cause of each type of problem.

Exterior water leakage

- Walls or window problems
- Basement problems
- Roof problems
- Other / Unknown

Interior water leakage

- Leaking pipes
- Broken fixtures
- Broken water heater
- Other / Unknown

Moderate Physical Problems

- Plumbing
- Heating
- Upkeep
- Kitchen

Demographics

- 118.3 million homes
- 37.3% rental
- 63% single-family detached homes
- 55.6% built pre-1980
- 22.1% basement under all of house*

Exterior Problems

- 20% exterior physical problems
- 2.8% missing roofing material
- 9.9% exterior water leakage

Interior Problems

- 8.5% interior water leakage
- 6.3% open cracks or holes
- 3.9% pipes leaked
- 11.2% mice or rats
- 8.5% blown fuses or breakers in the last three months

Heating

- 64.5% warm air furnace
- 0.5% room heater without flue
- 1% stove as main heating equipment
- 8.2% uncomfortably cold for 24 hours or more

(Note: Safety devices information was not available before 2007)

Healthy Homes Profiles

- Comparison to similarly situated housing

Interior-Exterior Relationships

- Likely to be interior problems if exterior problem is present.

More Detailed Snapshot

Characteristic	Outside Central City				Central City			
	Owner-Occupied		Rental		Owner-Occupied		Rental	
	Number/ Percent	National	Number/ Percent	National	Number/ Percent	National	Number/ Percent	National

HEALTHY HOMES INTERVENTIONS

2008 Expert Panel

Convened by CDC and NCHH

Categories

- ◆ Effective
- ◆ Needs More Field Evaluation
- ◆ Needs Formative Research
- ◆ No Evidence or Ineffective

HEALTHY HOMES INTERVENTIONS

- A** Controlling asthma symptoms and reducing asthma morbidity
- B** Reducing asthma triggers and exposure to asthma triggers
- C** Reducing Exposure to pests and pesticides
- D** Reducing exposure to pesticide residues
- E** Reducing exposure to radon in air less than 4 pCi/L
- F** Reducing exposure to environmental tobacco smoke
- G** Reducing children's blood lead levels, deteriorated lead-based paint and dust lead
- H** Reducing death and injuries from residential fires
- I** Preventing drowning
- J** Reducing scald burns

SUMMARY OF INTERVENTION FINDINGS

Review panelists found that:

11

interventions had sufficient evidence of effectiveness.

15

required more field evaluation.

19

needed formative research.

7

either had no evidence of effectiveness or were ineffective.

Sufficient evidence now shows that specific housing interventions can improve certain health outcomes. Click on the link below to view the full article.

[https://journals.lww.com/jphmp/Fulltext/2010/09001/A Systematic Review of Housing Interventions and.3.aspx](https://journals.lww.com/jphmp/Fulltext/2010/09001/A_Systematic_Review_of_Housing_Interventions_and.3.aspx)

Until effective standards for the domestic environment are devised, it is likely that children will continue to be employed as biological indicators of substandard housing.

CODES RELATED TO HEALTHY HOMES

- Health / Sanitation Codes
- Housing / Property Maintenance Codes
- Landlord-Tenant Laws
- Product Standards
- Hazard Management Laws

Housing v. Building v. Zoning Codes

*Does this
violate the
IPMC?*

KEY PROVISIONS OF CODES

- Structural Integrity
- Weatherproof
- Maintenance
- Cracks & Holes
- Loose or Rotting Materials
- Dampness & Deterioration
- Peeling Paint
- Ventilation / Windows
- Infestation
- Sanitation & Trash
- Cleanability
- Clothes Dryer
- Space Heater

MODEL CODES FOR HOUSING

Model Codes for Housing

Building Construction	Internat'l Building Code
Residential Construction	Internat'l Residential Code
Rehab	Internat'l Existing Building Code
Electrical	ICC Electrical Code
Fire	Internat'l Fire Code and National Fire Protection Association
Ventilation	Internat'l Mechanical Code
Plumbing	Internat'l Plumbing Code
Sewage	Internat'l Private Sewage Disposal Code
ALL BUILDINGS	Internat'l Property Maintenance Code

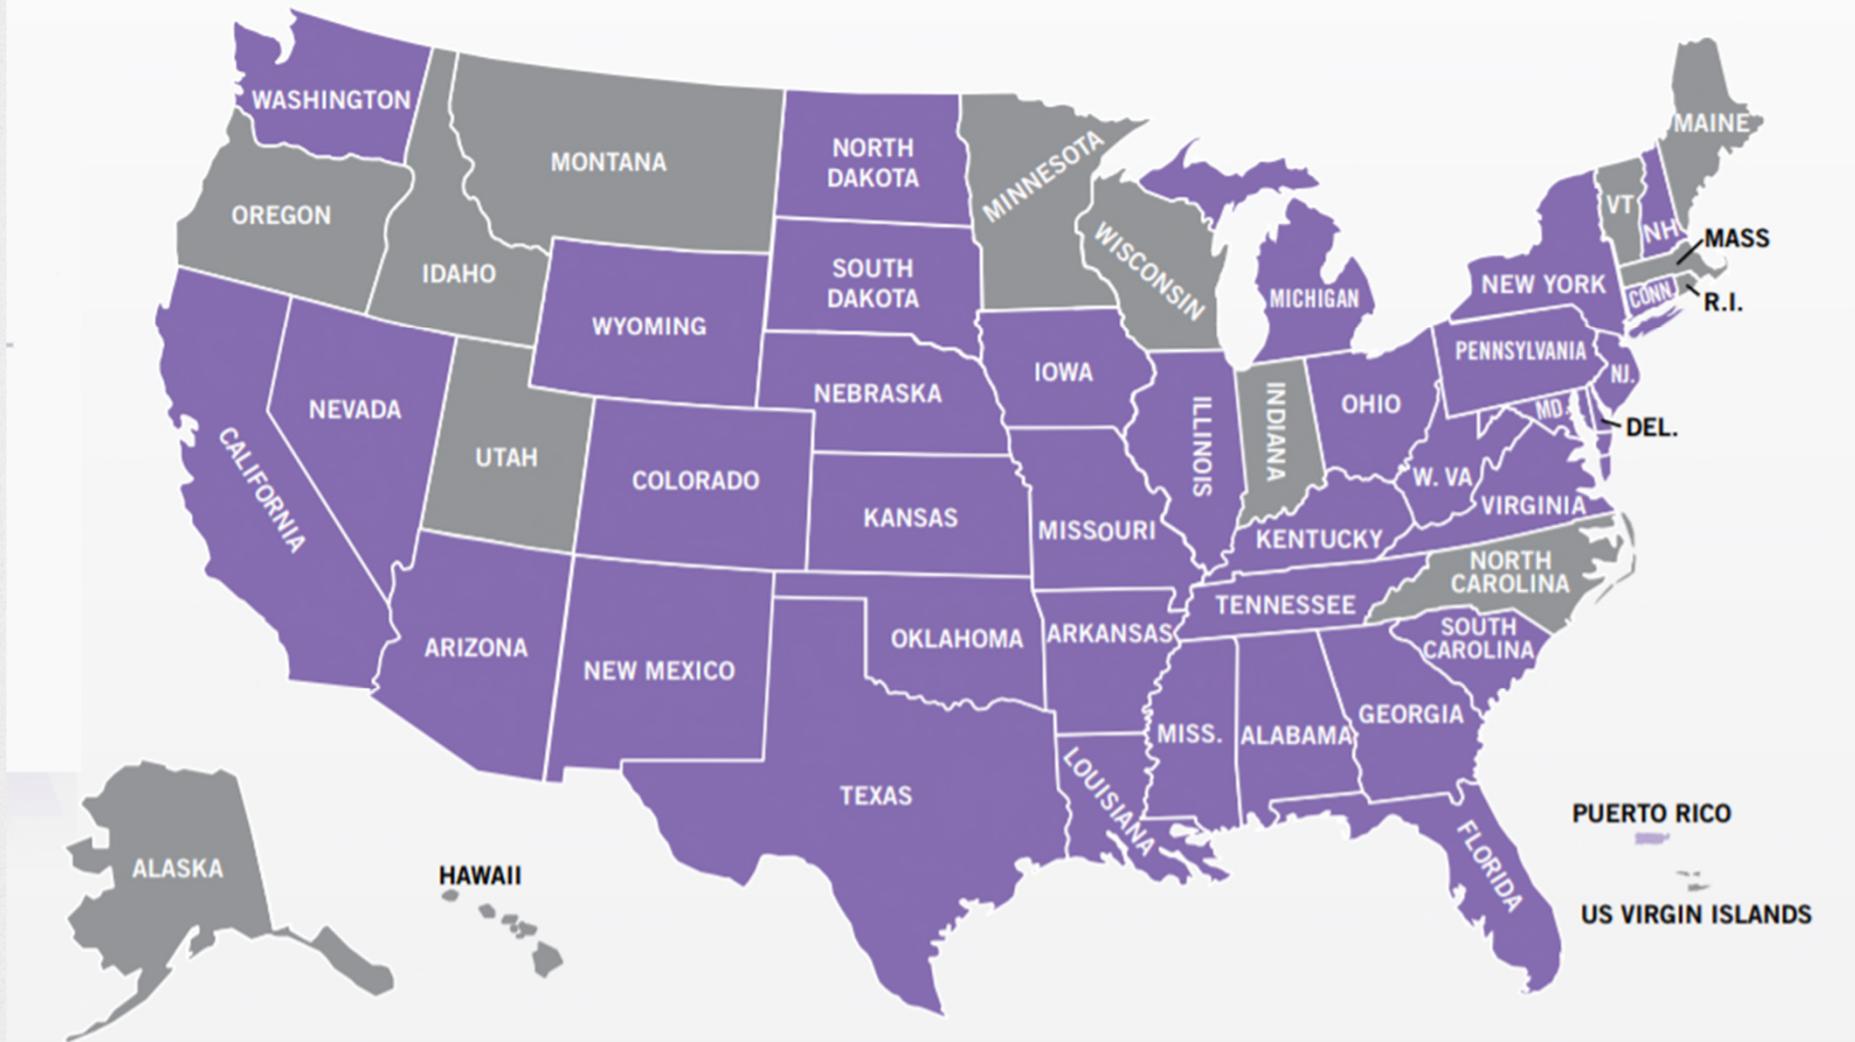

INT'L PROPERTY MAINTENANCE CODE

- Adopted by more than 600 communities
- Adopted or in use in 40 states and the District of Columbia
- **Applicability**
 - ◆ Existing Buildings
 - ◆ Rental and Owner Occupied Homes
 - ◆ Local Variations
- **Enforced by Code Officials**

INT'L PROPERTY MAINTENANCE CODE

- IPMC administered at the state or local level
- IPMC NOT administered at the state or local level

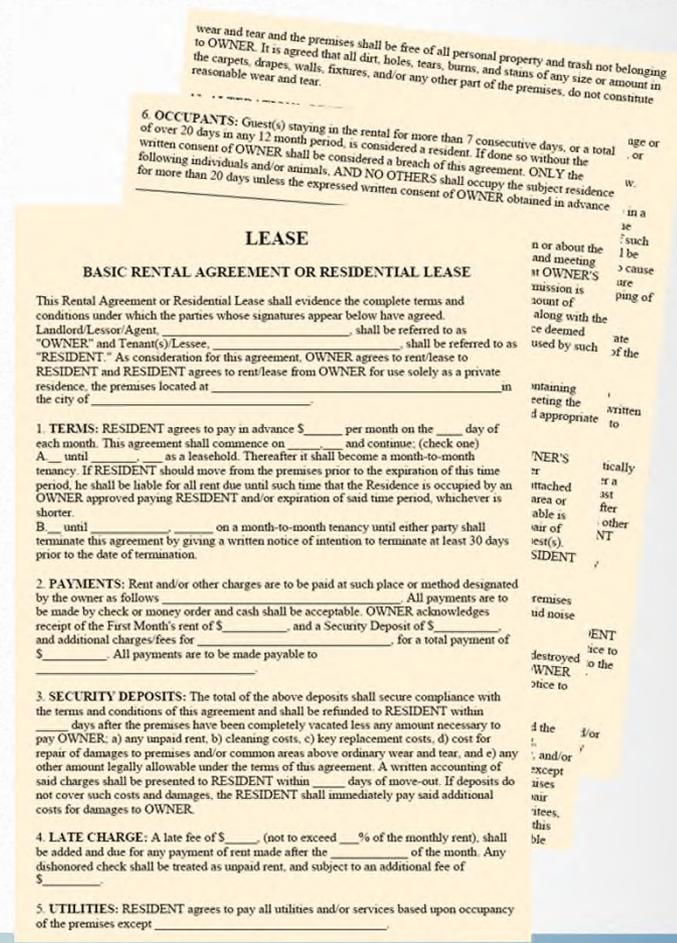

LANDLORD-TENANT LAWS

Rights and Responsibilities

Common Requirements

- Certificate of Occupancy
- Duty to Pay Rent
- Withholding Rent to Make Repairs
- Retaliation

Eviction and Enforcement

FEDERAL HEALTH PRIORITIES

Healthy People 2020 Objectives

- ↓ blood lead levels in children
- ↓ pesticide exposures
- ↓ indoor allergen levels
- ↑ homes with operating radon mitigation system
- ↑ new single family homes with radon-reducing features
- ↓ lead-based paint or related hazards in homes
- ↓ units with moderate or severe physical problems

GREEN BUILDING PRIORITIES

- NCHH Comparison – February 2009
- Major National Programs
 - ◆ Green Communities
 - ◆ Leadership in Energy and Environmental Design for Homes (LEED for Homes)
 - ◆ National Green Building Standard
 - ◆ Energy Star with Indoor Air Package

NATIONAL HEALTHY HOMES TRAINING CENTER & NETWORK

Page
1.18

- Brings together public health and housing practitioners
- Forum for exchanging information on new research and best practices.

Funded through a contract with the U.S. Department of Housing & Urban Development , and with support from the U.S. Environmental Protection Agency and the U.S. Centers for Disease Control & Prevention

making homes
healthier

PURPOSE OF THE COURSE

- Training on housing related health hazards
- Cross training of practitioners.
- Exchange of practical guidance about healthy housing
- Mechanism for introduction of new research findings
- Opportunity for networking, collaboration and partnerships.

COURSE OUTLINE

Overview

Start
with
People

House
as a
System

Keep It:

- Dry
- Clean
- Pest-Free
- Ventilated
- Safe
- Contaminant-Free
- Maintained
- Keep it Climate Controlled

Making
It Work

KEY MESSAGES

Page

1.18

Link between housing and health

Vulnerable groups

Basic public health and housing principles

Holistic approach

Codes and regulations

LEARNING OBJECTIVES

Describe four housing conditions and their associated health problems.

Identify three populations at higher risk for housing related disease and injury.

Identify three types of codes used to enforce remediation of housing-related hazards.

Steps to Healthier Homes

START WITH PEOPLE

-  Start with People
-  House as a System
-  Keep It:
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  Making it Work

LEARNING OBJECTIVES

EXPLAIN how to work with people to get important information from them about potential hazards in the home.

IDENTIFY key routes of exposure and their relationship to housing hazards.

Why do you go into houses?

WHY START WITH PEOPLE?

Page

2.1

What good are they?

What's difficult about people?

How can you deal with people?

OPEN V. CLOSED QUESTIONS

Open-Ended or Indirect

- How
- What
- Tell me about
- Describe for me

Closed- Ended or Direct

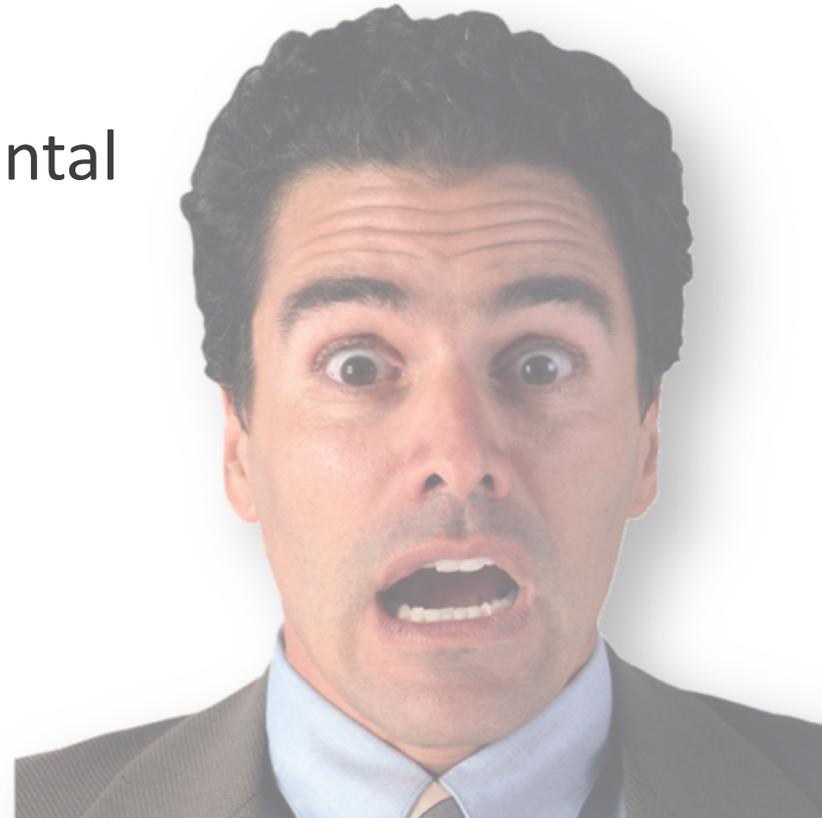

- Are
- Is
- Do

BRACKETING

Method to:

- ◆ Stay Calm and Non-Judgmental
- ◆ Keep Ability to Listen

SPECIAL COMMUNICATION ISSUES

- Language
- Cultural
 - ◆ Shoes in the Home
 - ◆ Men and Women
- Responding to Problems
 - ◆ Hoarding
 - ◆ Tolerance for Clutter and Pests

RESIDENT CHOICES

Health

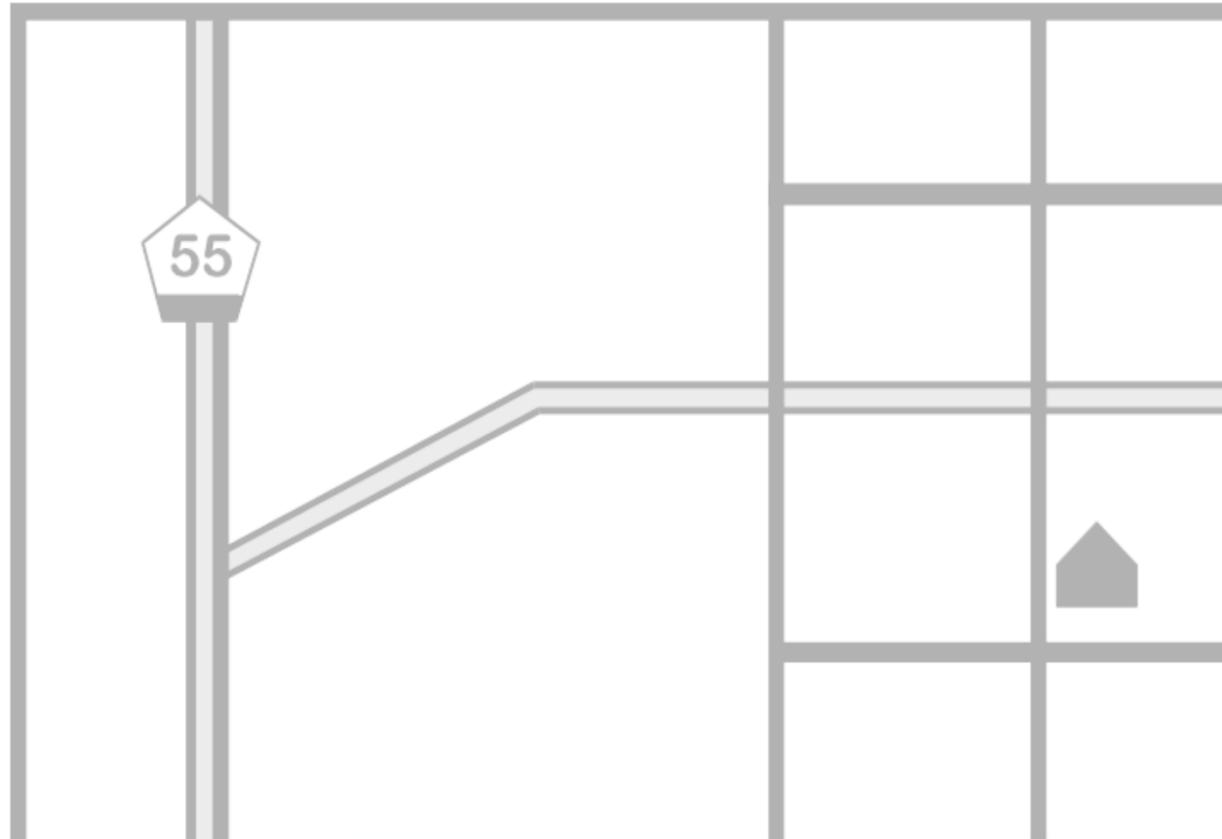

Comfort

Cost

WHAT'S GOING ON IN THE NEIGHBORHOOD?

- Land use
- Zoning
- Services
 - ◆ Water
 - ◆ Sewer
 - ◆ Solid waste
- Water supply

ROUTES OF EXPOSURE

- Inhalation
- Ingestion
- Skin Absorption
- Injection
- Built-In Protection Mechanisms

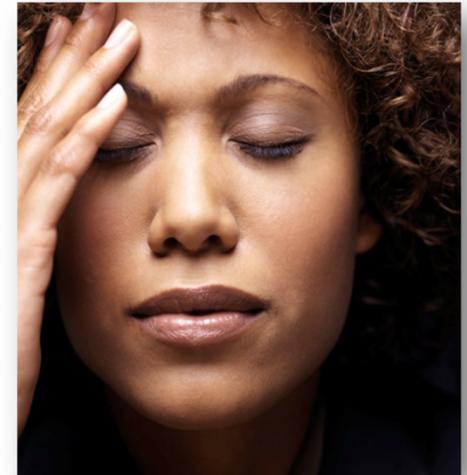

Risk = Hazard x Exposure

HOUSING RELATED DISEASE

Signs and Symptoms

- Signs are objective
 - ◆ Blood pressure, heart rate, peak flow
 - ◆ Bloody nose, rash
- Symptoms are subjective
 - ◆ Back pain, fatigue, headaches
- Some can be a combination
 - ◆ Shortness of breath

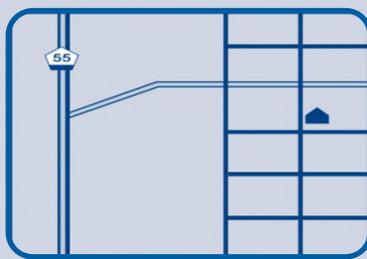

HOUSING RELATED DISEASE

Signs and Symptoms

Timing

Location

Corroboration

MENTAL HEALTH

Poor housing conditions

Poor-quality multifamily homes

Lack of light

Dampness or mold and depression

Bed bugs

Don't overlook or ignore housing conditions that may affect health.

OFTEN OVERLOOKED

Sources of health problems

Lead

- Was your home built before 1978? 1950?

Radon

- Was your home ever tested for radon?

CO (Carbon Monoxide)

- Do you have a carbon monoxide detector?

OFTEN IGNORED

Sources of health problems

Environmental Tobacco Smoke

- Does anyone in the family smoke?
- Do they want help quitting?

Consumer chemicals

- What cleaning chemicals do you use?
- Where do you store them?

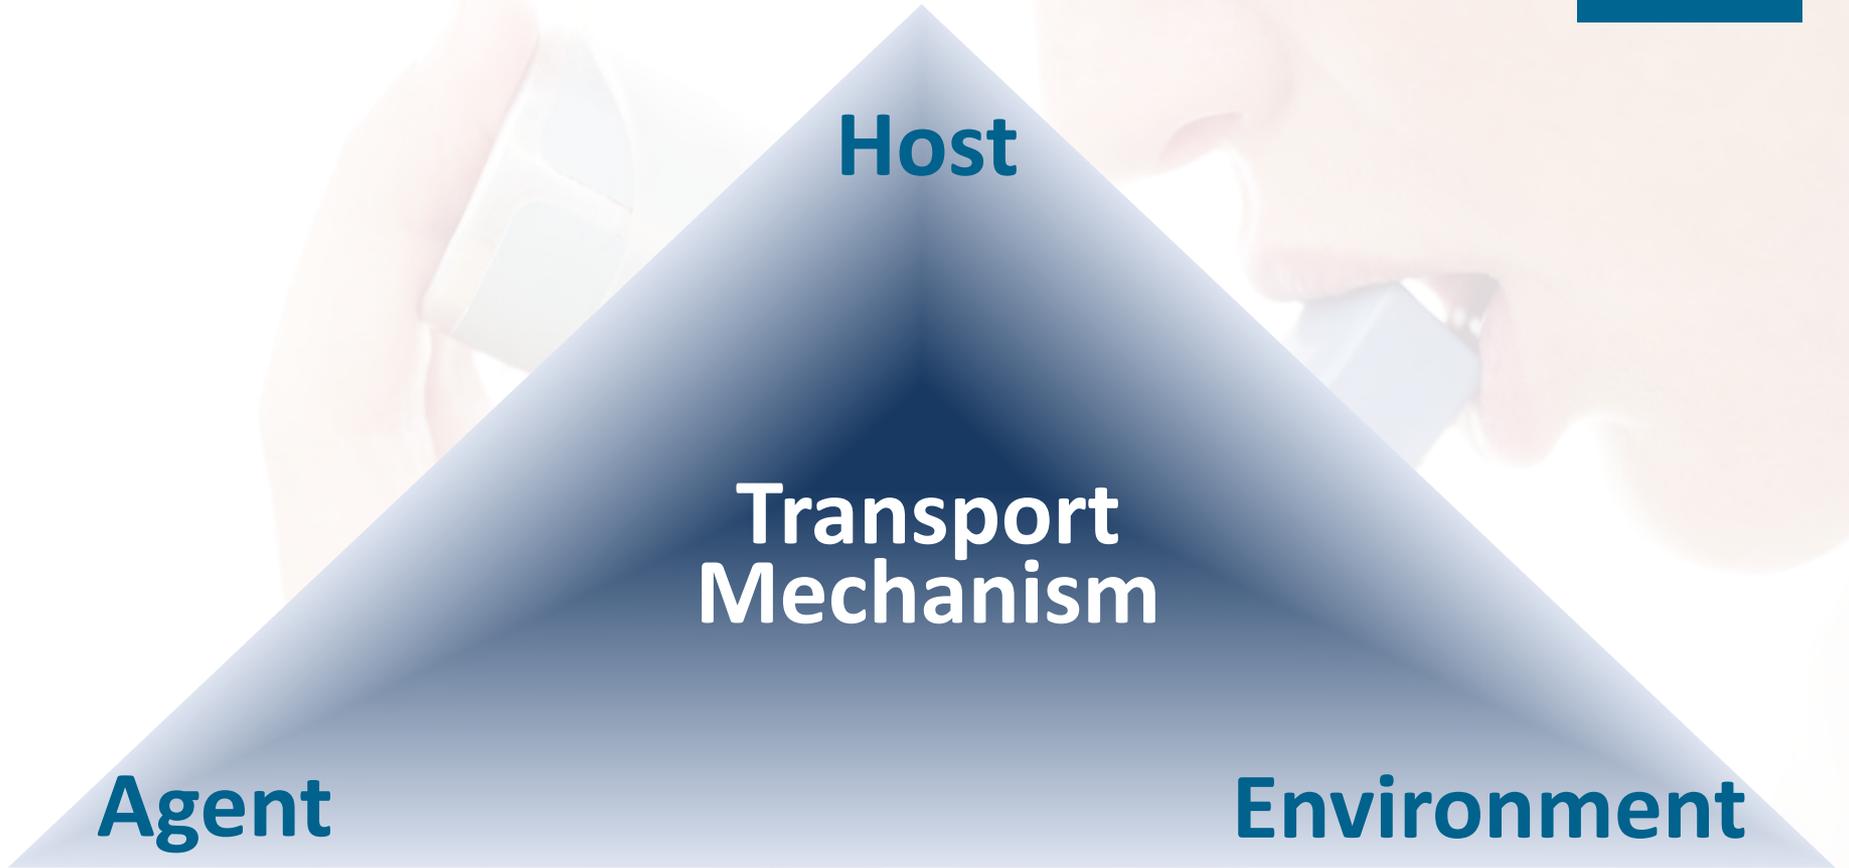

Pesticides

- Any Pesticides used?
- Which ones?

EPIDEMIOLOGIC TRIANGLE OF DISEASE

Page
2.7

LEARNING OBJECTIVES

EXPLAIN how to work with people to get important information from them about potential hazards in the home.

IDENTIFY key routes of exposure and their relationship to housing hazards.

Steps to Healthier Homes

HOUSE AS A SYSTEM

-  **Start with People**
-  **House as a System**
-  **Keep It:**
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  **Making it Work**

IDENTIFY three important housing systems that contribute to a comfortable living space.

WHAT'S A HOUSE?

HOMES SHELTER US FROM:

Page

3.2

Animals and insects

Wind

Sun

Rain (sleet, snow)

Cold or hot air

Dust

Anchorage

Saint Paul

Marquette

Bangor

Seattle

Billings

Cleveland

Boston

Salt Lake

Denver

DC

Nashville

Saint Louis

Phoenix

Atlanta

Los Angeles

Miami

Tulsa

New Orleans

Saint John

Honolulu

Houston

Wichita

MOST OF US ARE COMFORTABLE:

Air temperature:

65° F(active) – 80° F (bathing)

Air relative humidity:

30% – 70%

Air motion:

20 – 40 feet per minute

Surrounding surface temperatures:

within 10 – 15° F of room air

WE HAVE SYSTEMS TO:

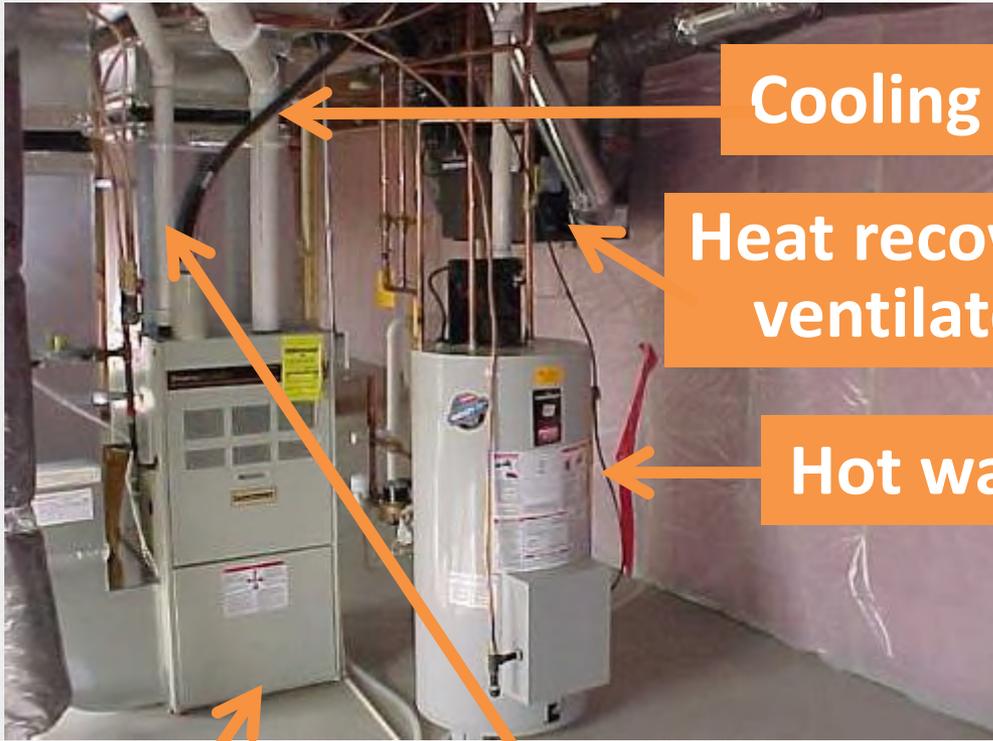

- Add heat
- Remove heat
- Ventilate
- Maybe add or remove humidity

HEATING SYSTEMS

- Fuel – gas, oil, wood, electric
- Distribution
 - Hot water, steam, warm air, space heaters
 - Radiators, baseboard, ducts
 - Radiant floors and ceilings
- Chimneys, sealed combustion, fan powered
- Temperature Controls

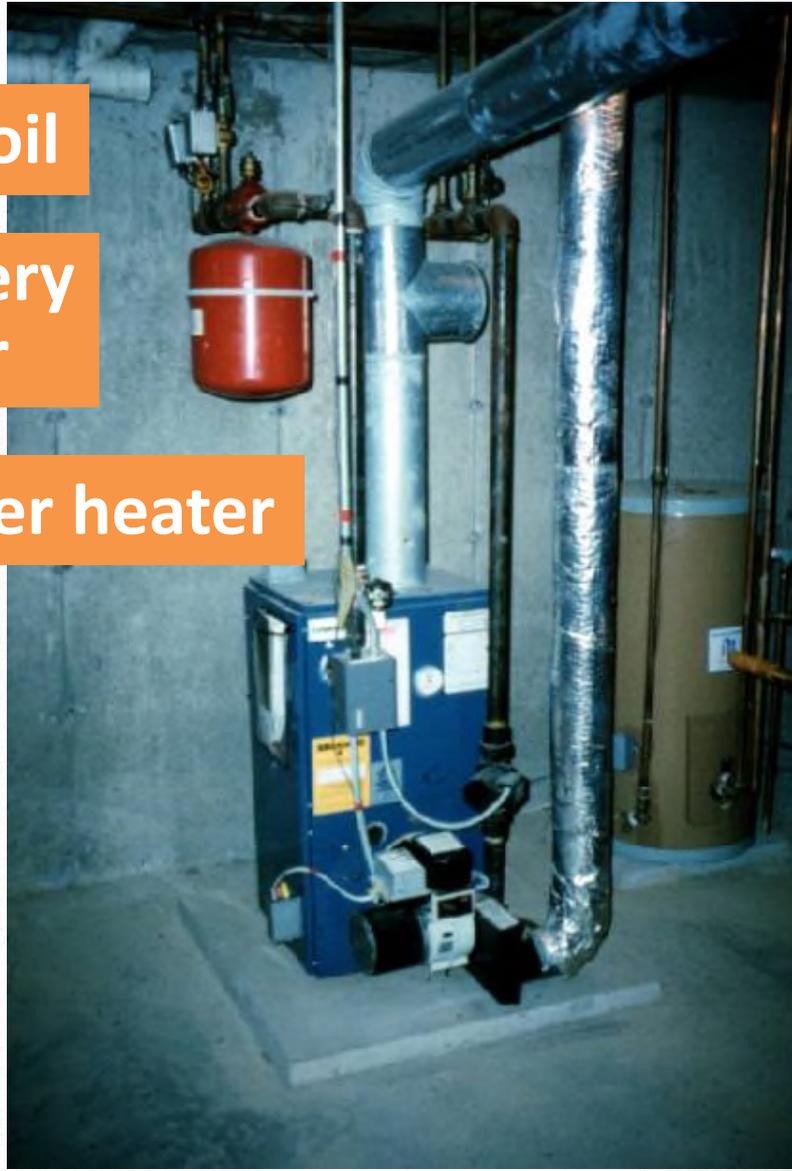

Cooling coil

Heat recovery ventilator

Hot water heater

Furnace

Intake for furnace

Page

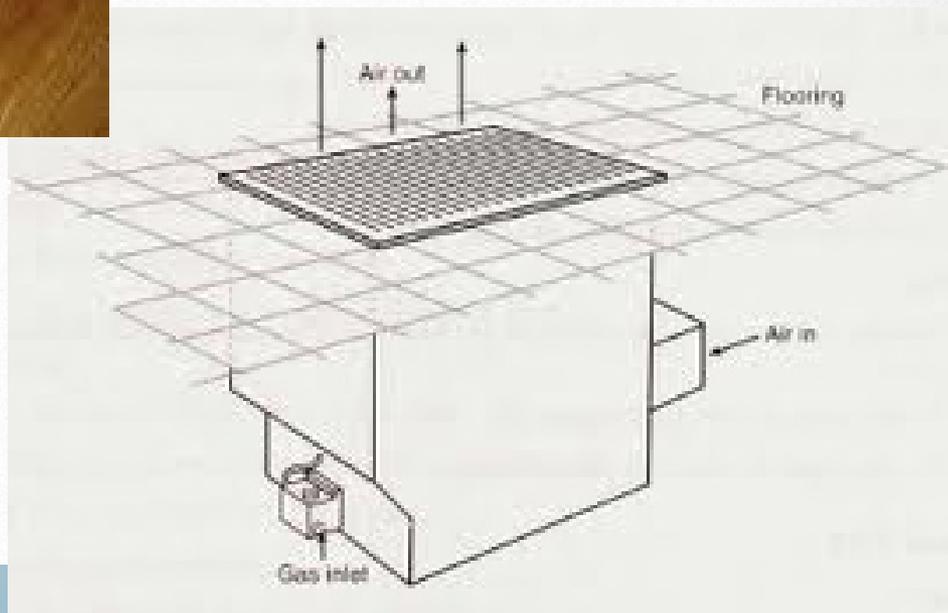

3.4

Octopus heating system

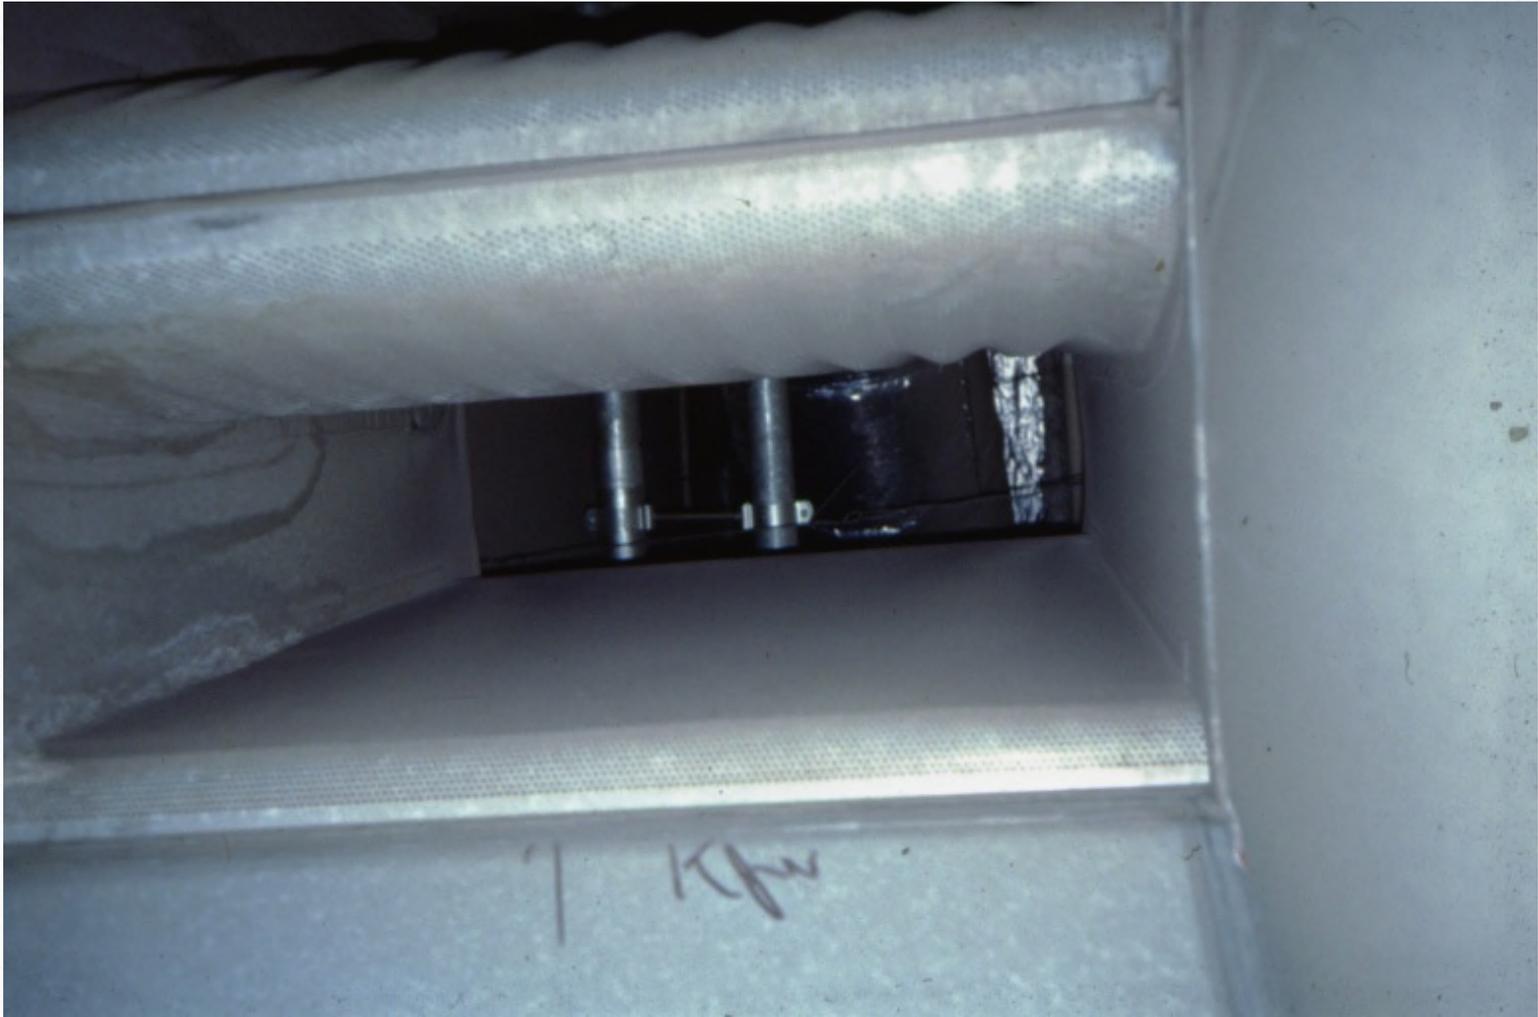

Floor furnaces

Gas-fired wall furnace

Page
3.5

Heat Exchangers

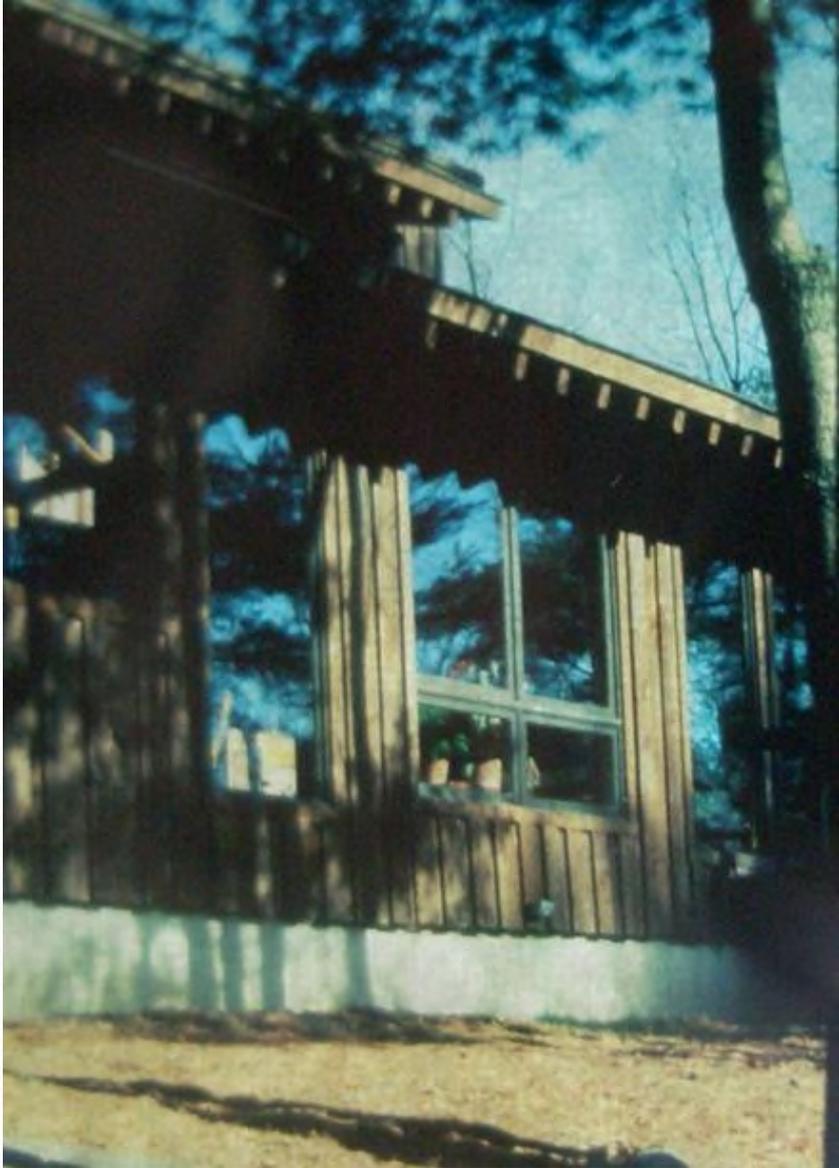

COOLING SYSTEMS

- Fuel – electric
- Windows, fans and shades
- Distribution
 - ◆ Central air
 - ◆ Through the wall
 - ◆ Duct-less splits
- Dehumidification
 - ◆ Air conditioners/part-load
 - ◆ Dehumidifiers
- Control – thermostat, humidity

INTERNAL AND SOLAR GAINS:

Good when cold out; bad when hot out

- Heat from people
- Heat from appliances
- Solar through windows
- Average US house
 - 23% of heating is done by these gains
 - 59% of cooling is caused by these gains

OTHER FACTORS

Water

- drinking
- washing
- cooking
- toilets

Cooking and storing food

Ventilating fans

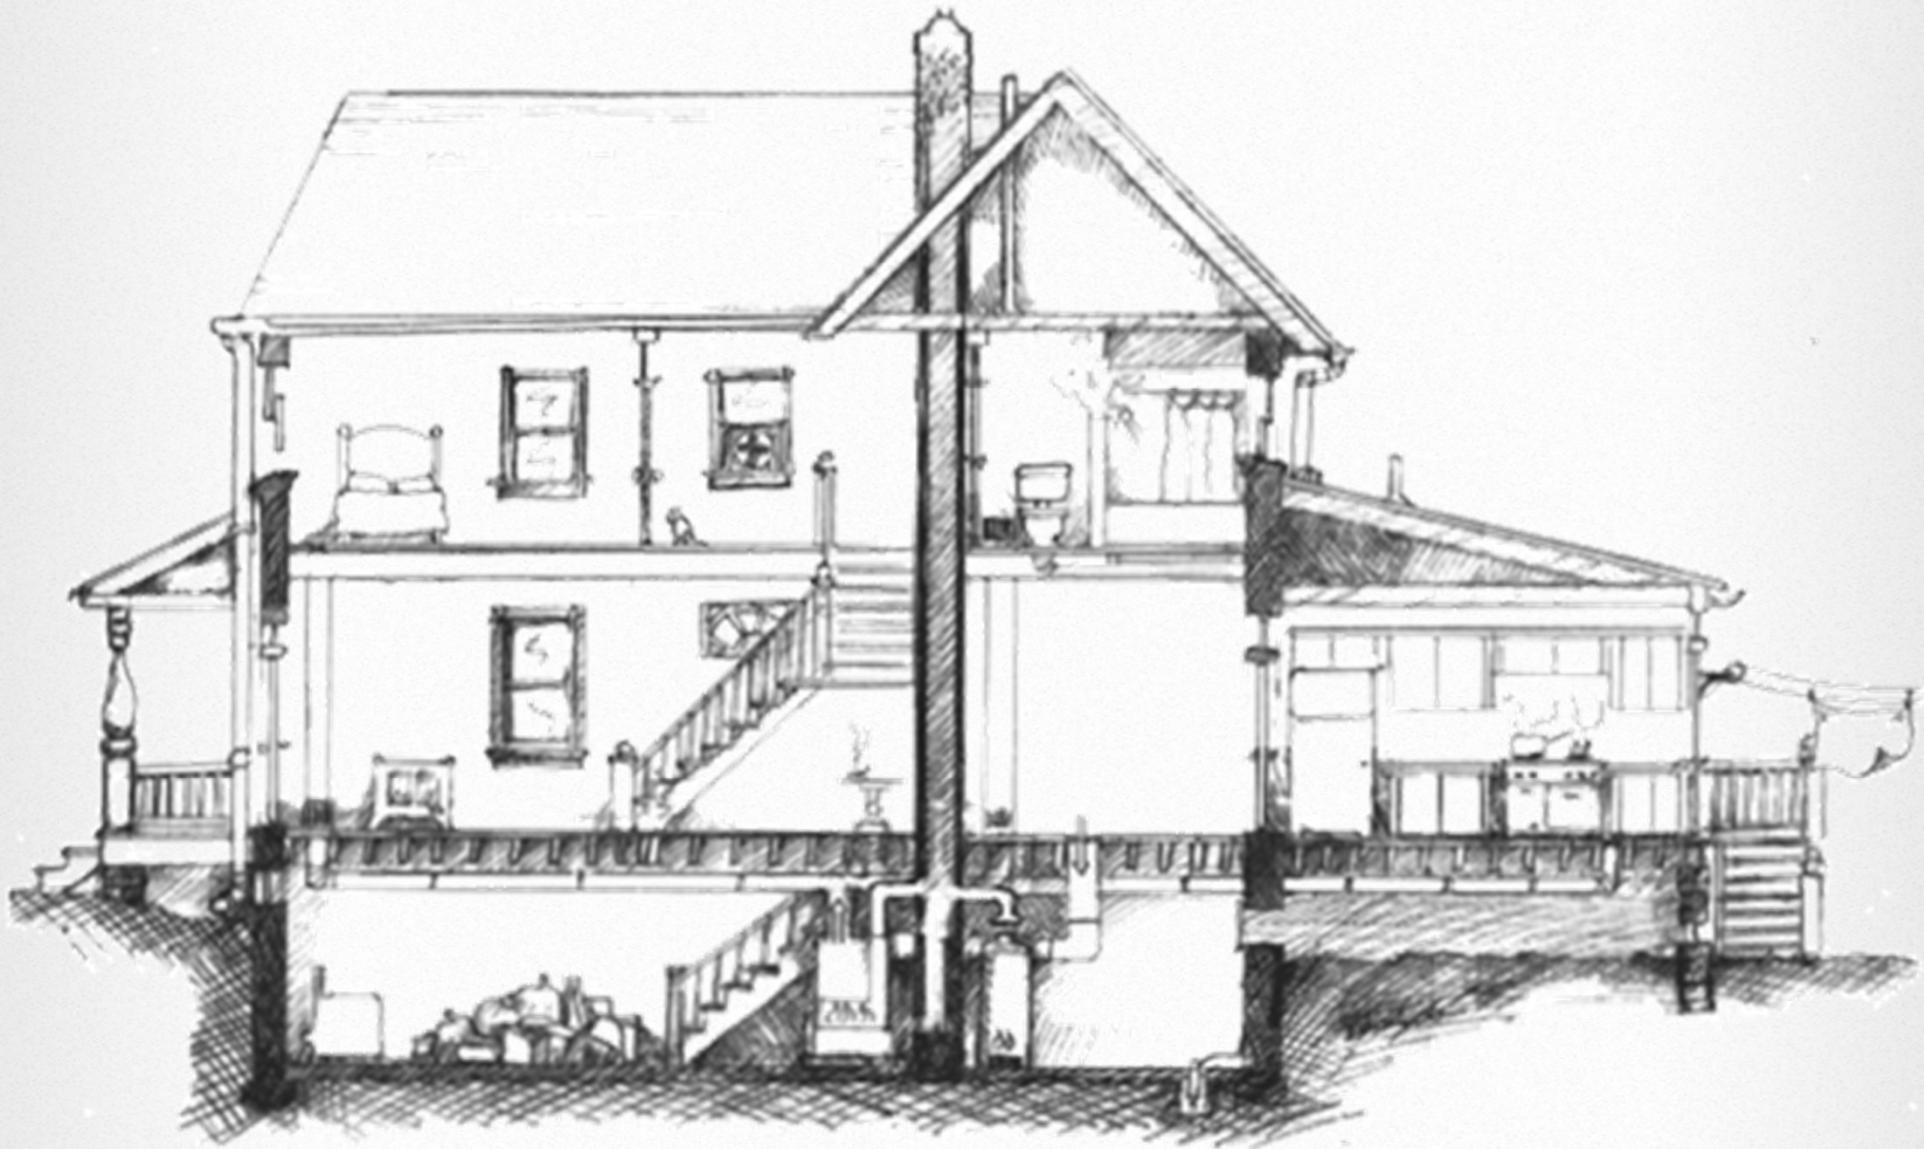

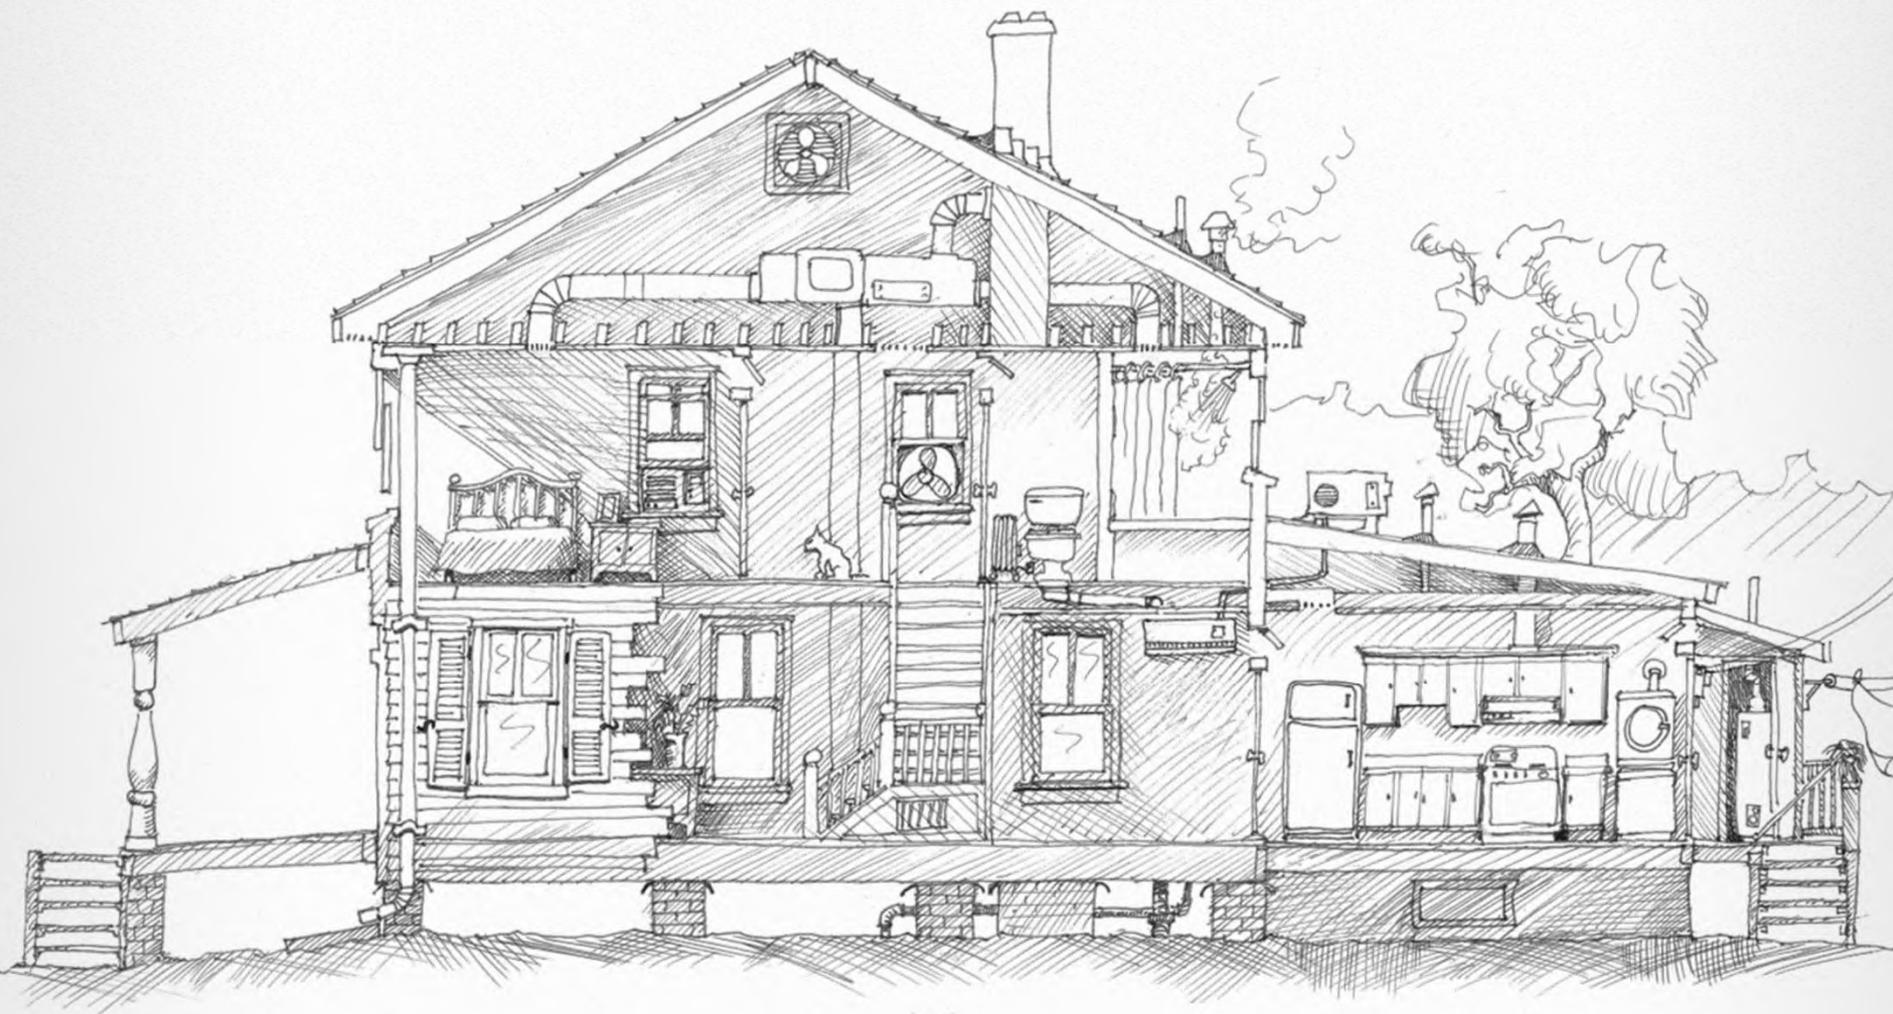

Lighting

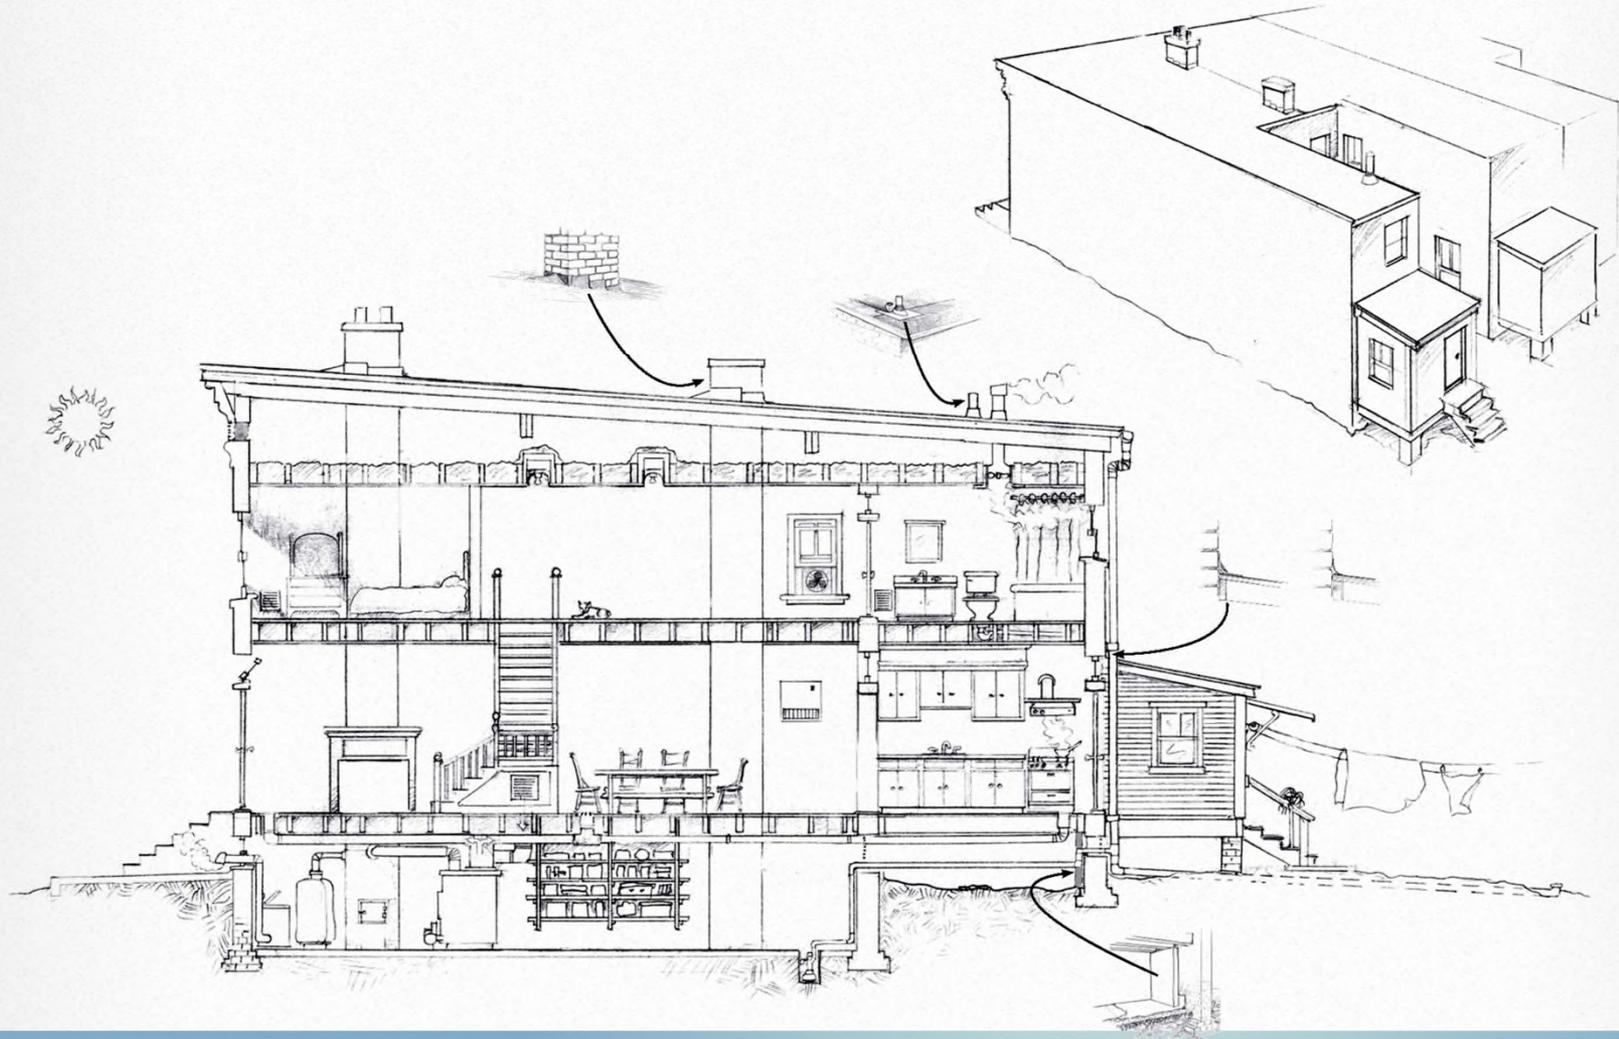

Computers, stereos, hair dryers,
razors

LEARNING OBJECTIVE

IDENTIFY three important housing systems that contribute to a comfortable living space.

KEEP IT DRY

Steps to Healthier Homes

-  Start with People
-  House as a System
-  Keep It:
 -  1. Dry
 -  2. Clean
 -  3. Pest-Free
 -  4. Ventilated
 -  5. Safe
 -  6. Contaminant-Free
 -  7. Maintained
 -  8. Climate Controlled
-  Making it Work

LEARNING OBJECTIVES

1

- Name three health hazards in the home that are related to excessive moisture.

2

- Identify four sources of moisture in the home.

3

- Describe five strategies for controlling moisture in the home.

MOLD & MOISTURE HEALTH EFFECTS

- Upper respiratory tract symptoms
- Coughing
- Wheezing
- Asthma symptoms
- Hypersensitivity pneumonitis

Does water drain **AWAY** from the house?

Page
4.1

MOISTURE SOURCES

- Poorly managed rainwater/groundwater
- Plumbing leaks
- Condensation on surface
- Construction moisture

INTERIOR WATER LEAKAGE

Sources of interior water leakage, 2015 American Housing Survey

8.5 %

Interior Water Leak

Source of interior leak	% among total # of units
Leaking pipes	3.9%
Fixtures	2.0%
Broken water heater	0.9%
Other or unknown	2.3%

EXTERIOR WATER LEAKAGE

Sources of exterior water leakage, 2015 American Housing Survey

9.9%

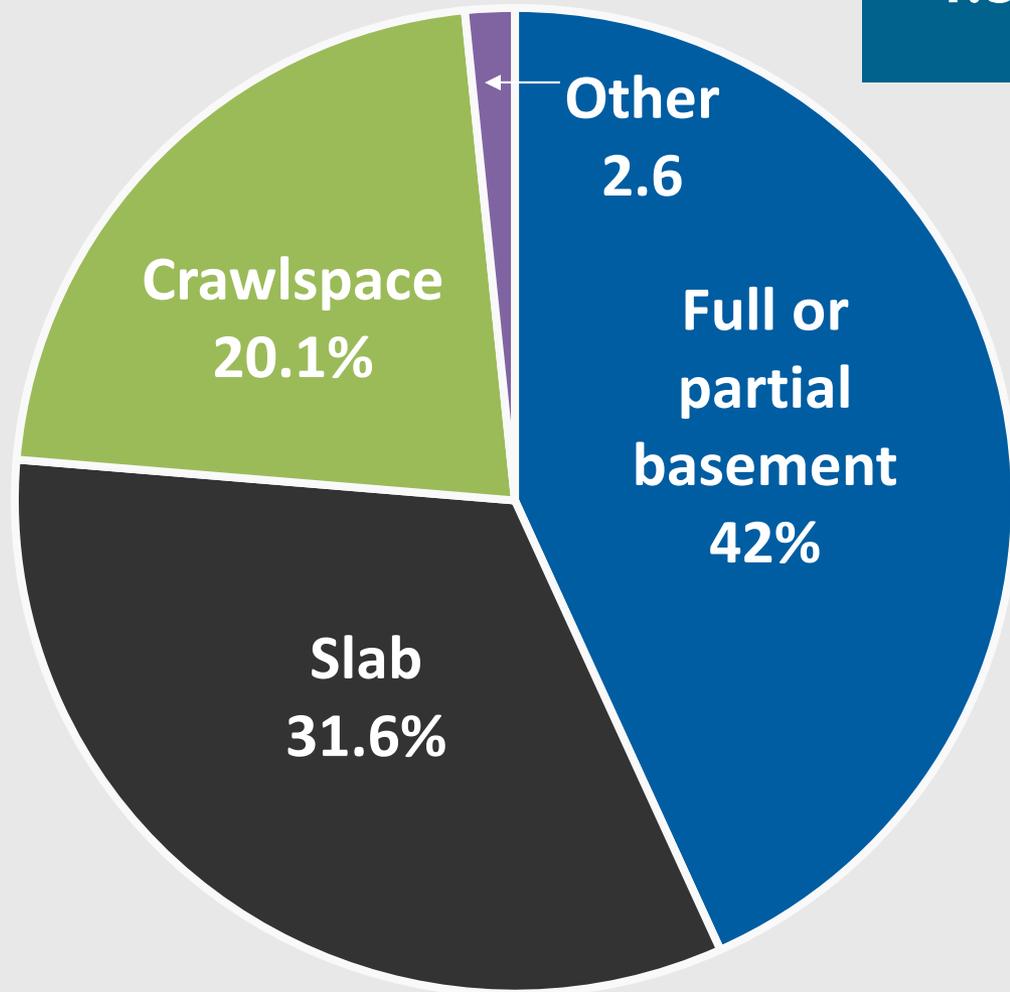

Exterior Water Leak

Source of exterior leak	% among total # of units
Roof	5.6%
Basement	2.2%
Walls/windows/doors	2.0%
Other/unknown	1.0%

EXTERIOR PHYSICAL CONDITION

Occupied housing units, 2015 American Housing Survey

19%

One or More Exterior Problems

Exterior condition	% among total # of units
Foundation crumbling/open crack/hole	5.1%
Broken windows	3.7%
Missing roofing material	2.8%
Missing outside wall material	2.2%
Sagging roof	1.8%
Hole in roof	1.3%
Sloping outside walls	1.1%
Boarded up windows	1.0%

COMFORT LEVELS

AIR TEMPERATURE:

- 65°F - 80°F

AIR RELATIVE HUMIDITY:

- 30% – 70%

AIR MOTION:

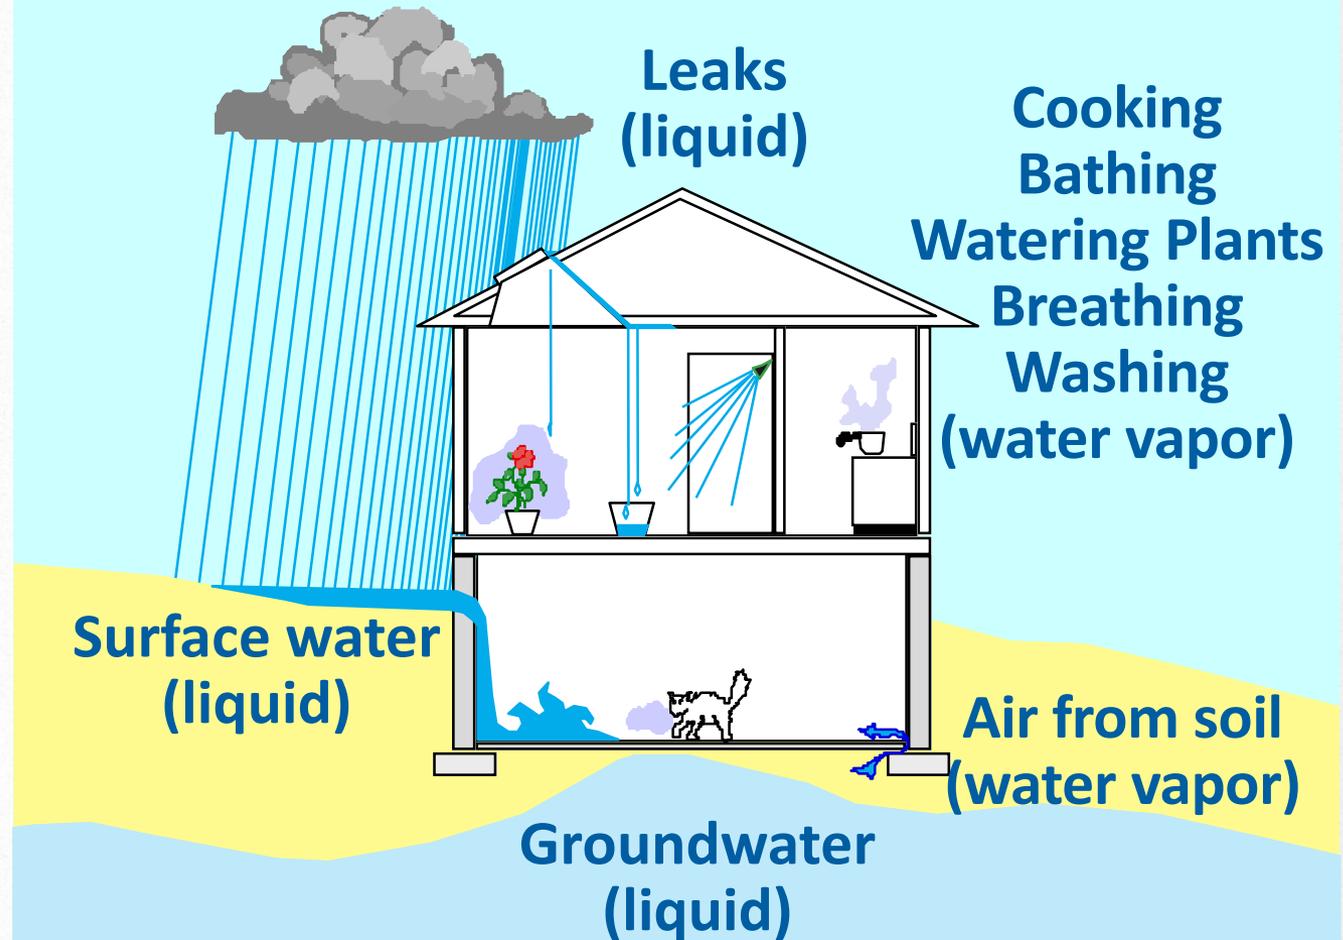

- 20 – 40 feet per minute

SURROUNDING SURFACE TEMPERATURES:

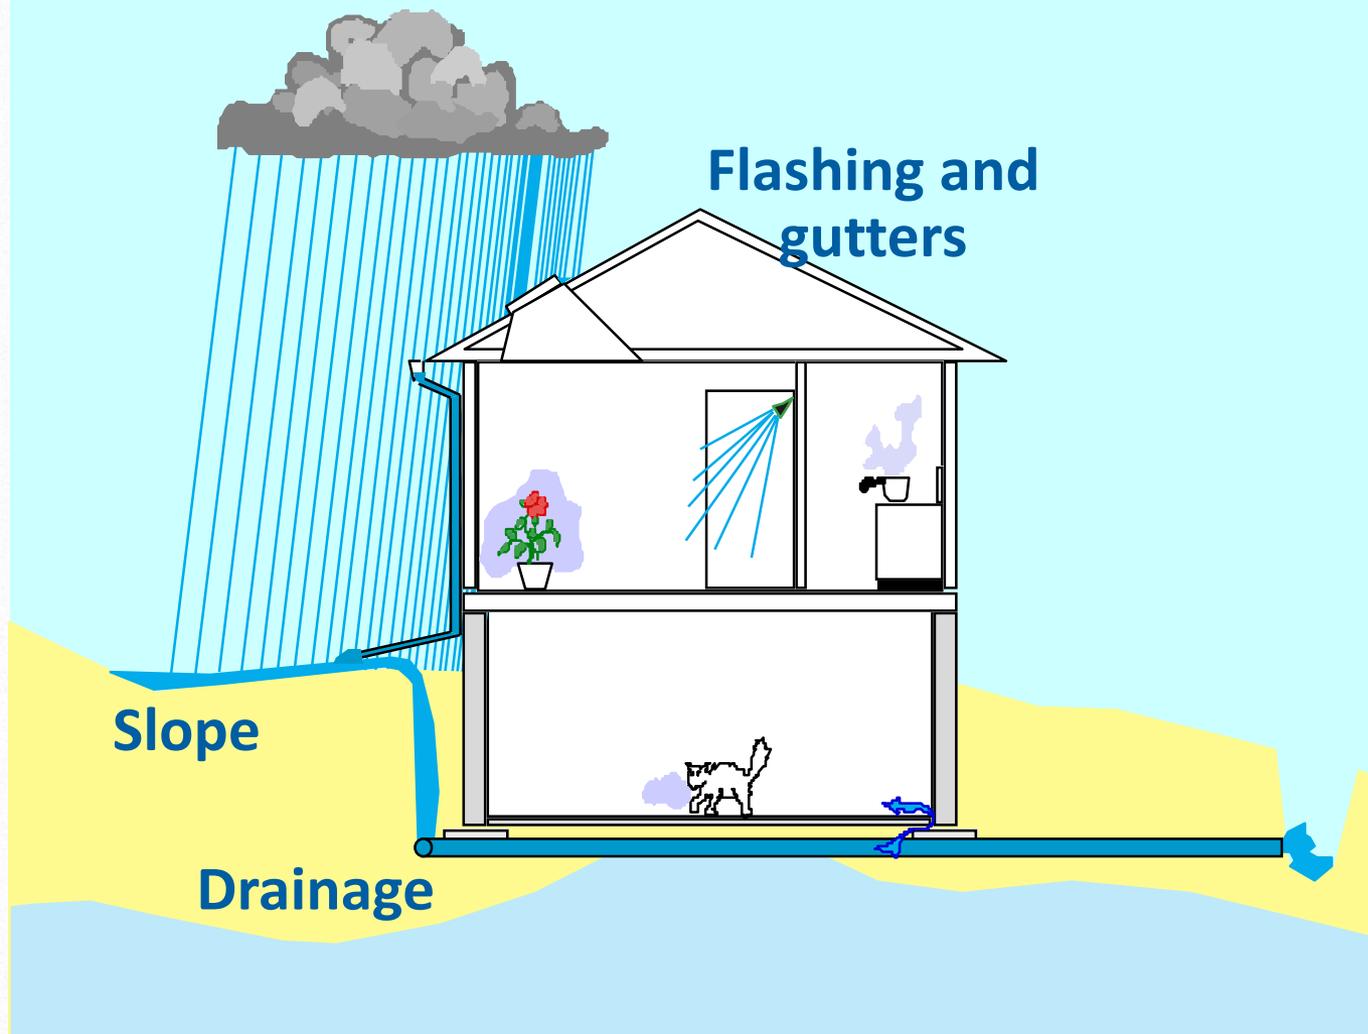

- within 10 – 15°F of room air

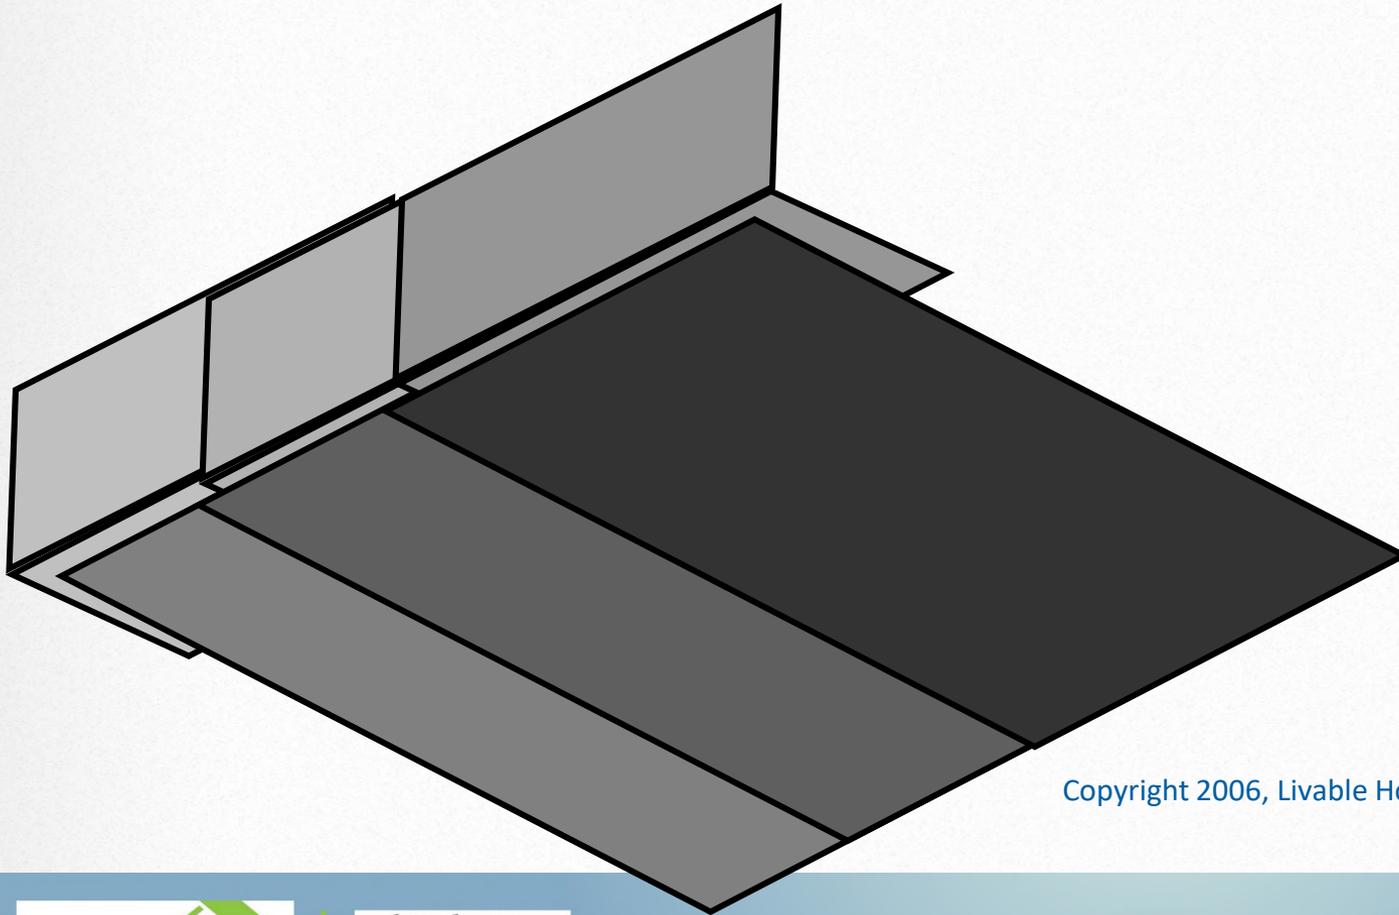

How Water Enters a Building

Stop Liquid Water Entry First

Retrofit rainwater protection

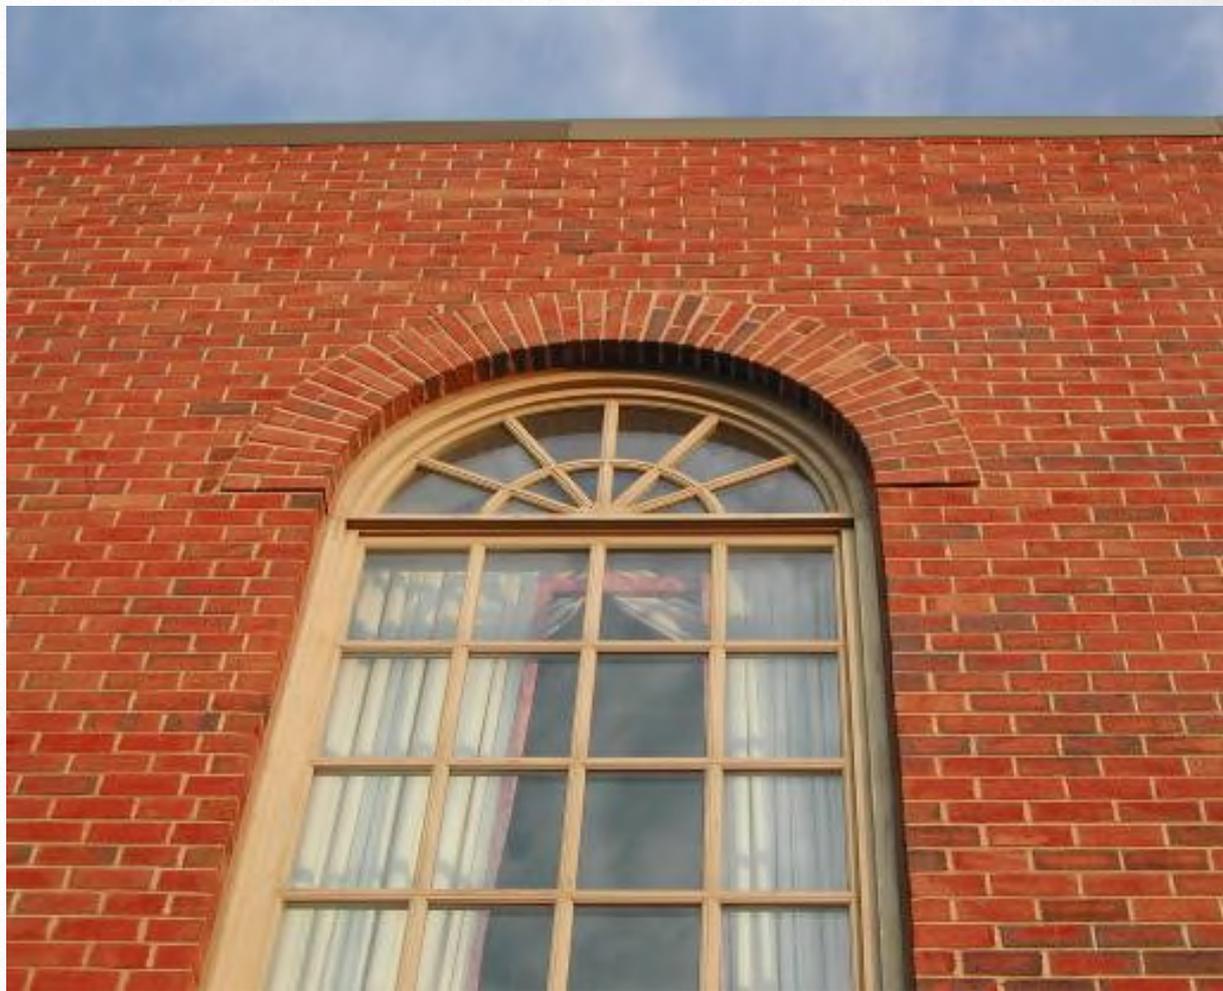

Windows leak?

*Clues on the
outside shape
your indoor
inspection*

Masonry + rain & sun + air conditioning + vinyl wallpaper
= mold

*Air conditioner condensate
drains into building*

*Porous material
can wick water
from outside*

GROUND SLOPES TOWARD HOUSE

BELOW GRADE

Moisture meters

- ◆ Is material wet?
- ◆ Source of water?

Crawlspaces may contain:

- Mold
- Pests
- Pesticides
- Asbestos
- Lead paint
- Sewer gas
- Radon

Bad Crawlspace

What looks like a dry crawlspace can add excess water vapor

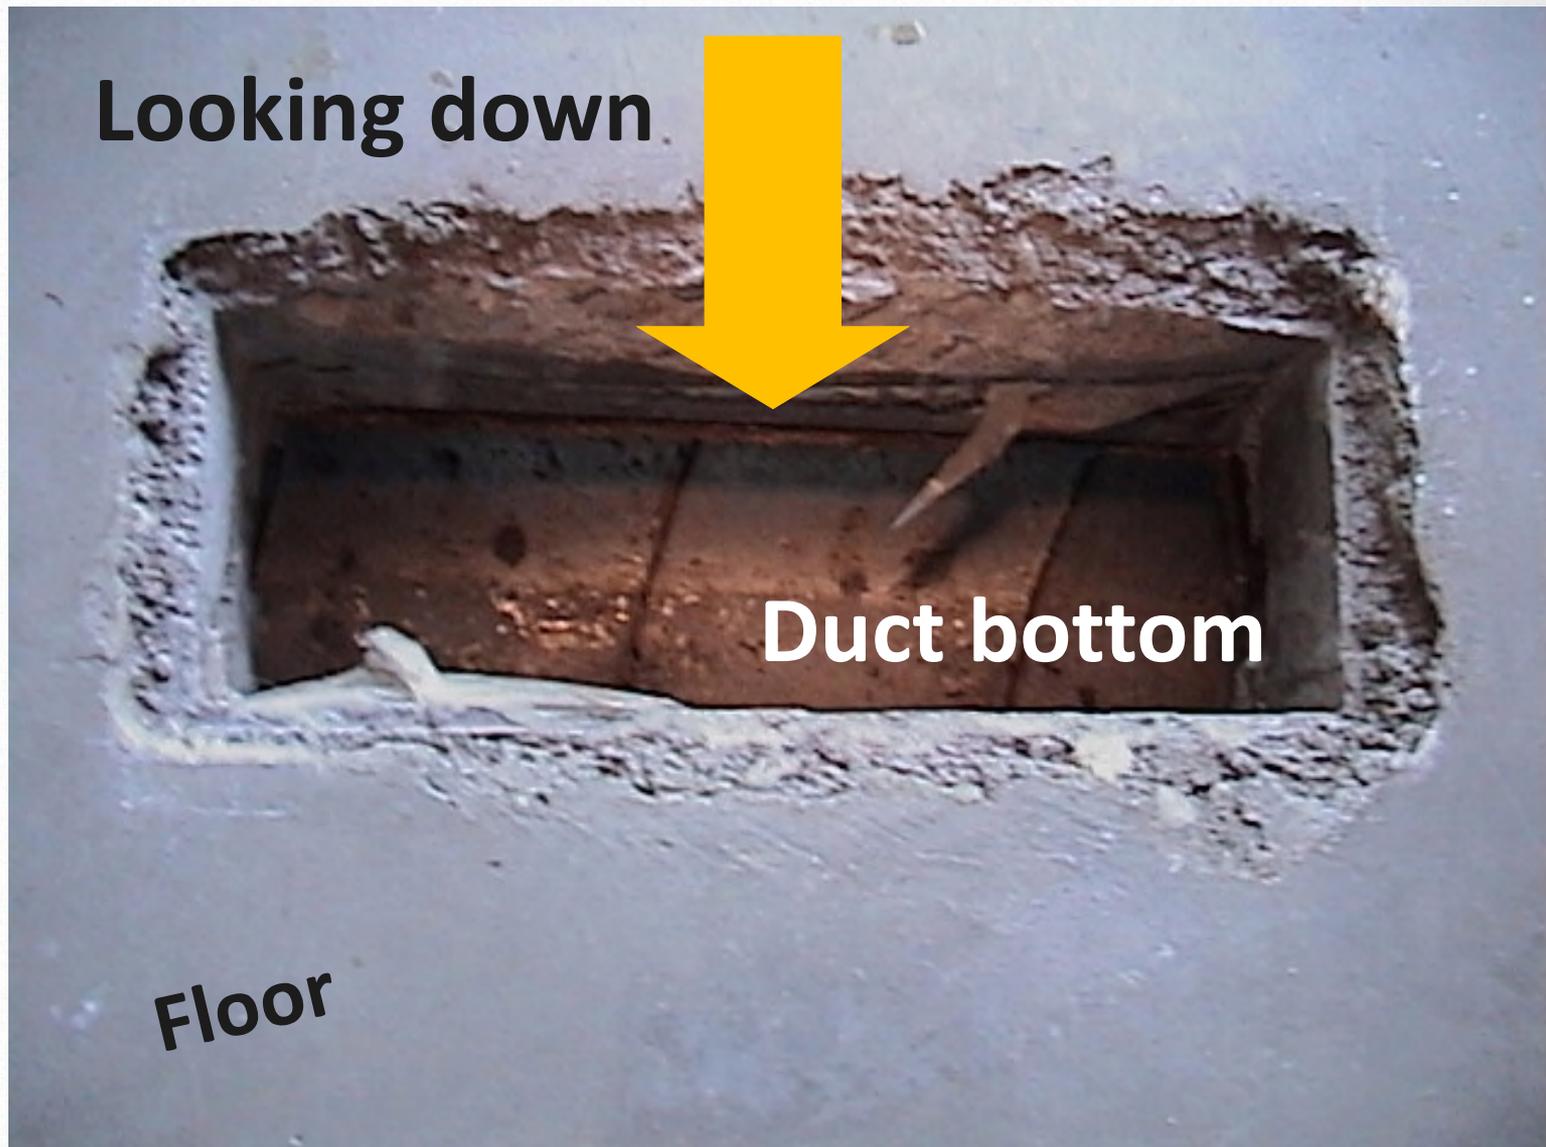

Good Sealed Crawlspace

Failed drainage systems

*Are there floor drains?
A dehumidifier?*

STEPS TO DRY BASEMENTS

- Drain, drain, drain
- No paper or wooden materials in contact with foundation
- Keep warm humid air away from earth chilled surfaces
- Dehumidify

Plumbing problems

Drain pan in the event of heater leak

Leaky refrigerator drip pan causes mold

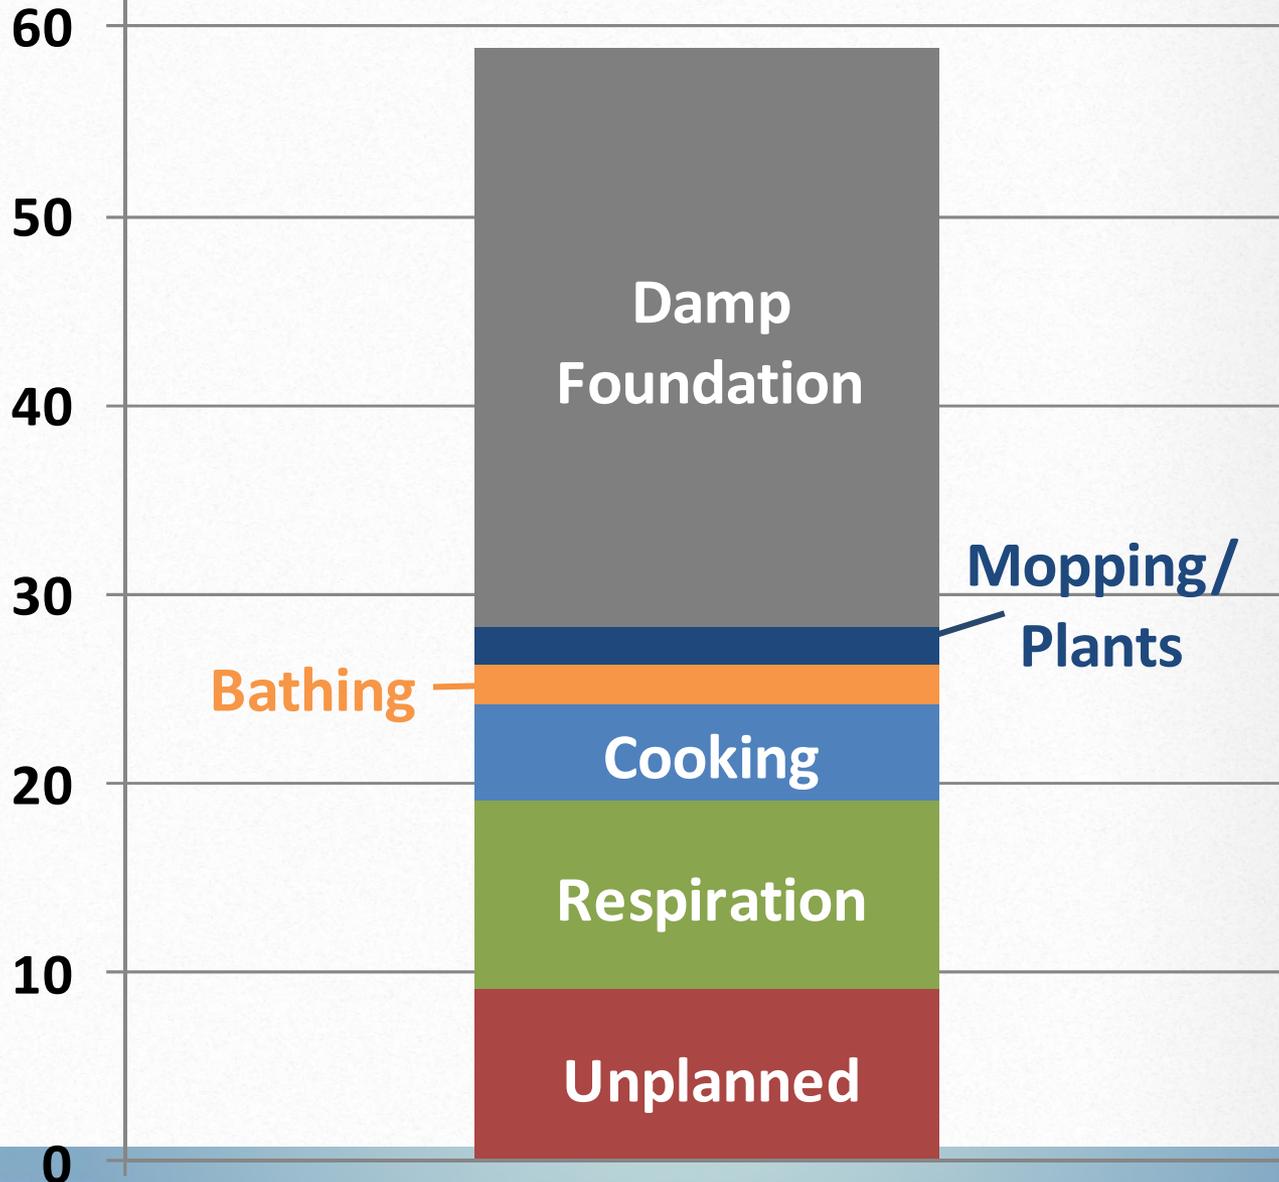

If humidity levels are greater than 95% for three to six weeks...

Vacuum bag with mold

Pounds Moisture per Day
80 F - 70%RH OA

Mold can grow where we cannot see it

Mold in the air conditioner?

CONDENSATION WHEN COLD OUTSIDE

Mold due to poor insulation or wind blowing through insulation.

Mold around window where there is no insulation.

Unsealable recessed light allows warm, moist air into the unheated attic.

DEHUMIDIFIERS

- Wattage
 - (Energy Star rated)
- Water removal rate
- Noise
- Drainage
- Icing
- Filter

RESPONSE TO MOLD PROBLEMS

Identify

Dry

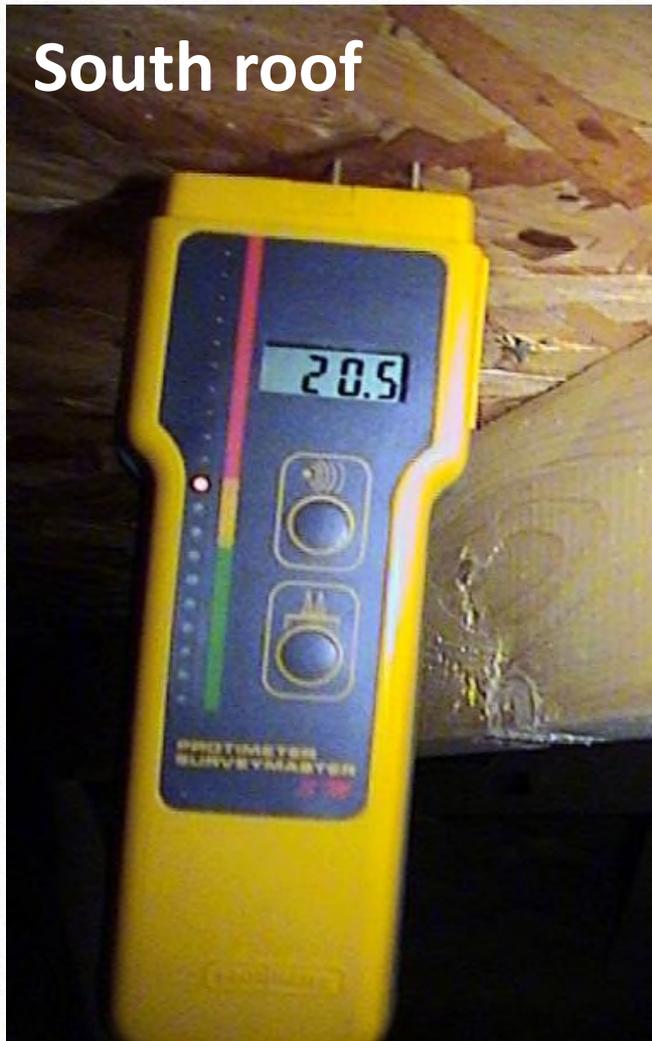

Design

Discard or decontaminate

Implement

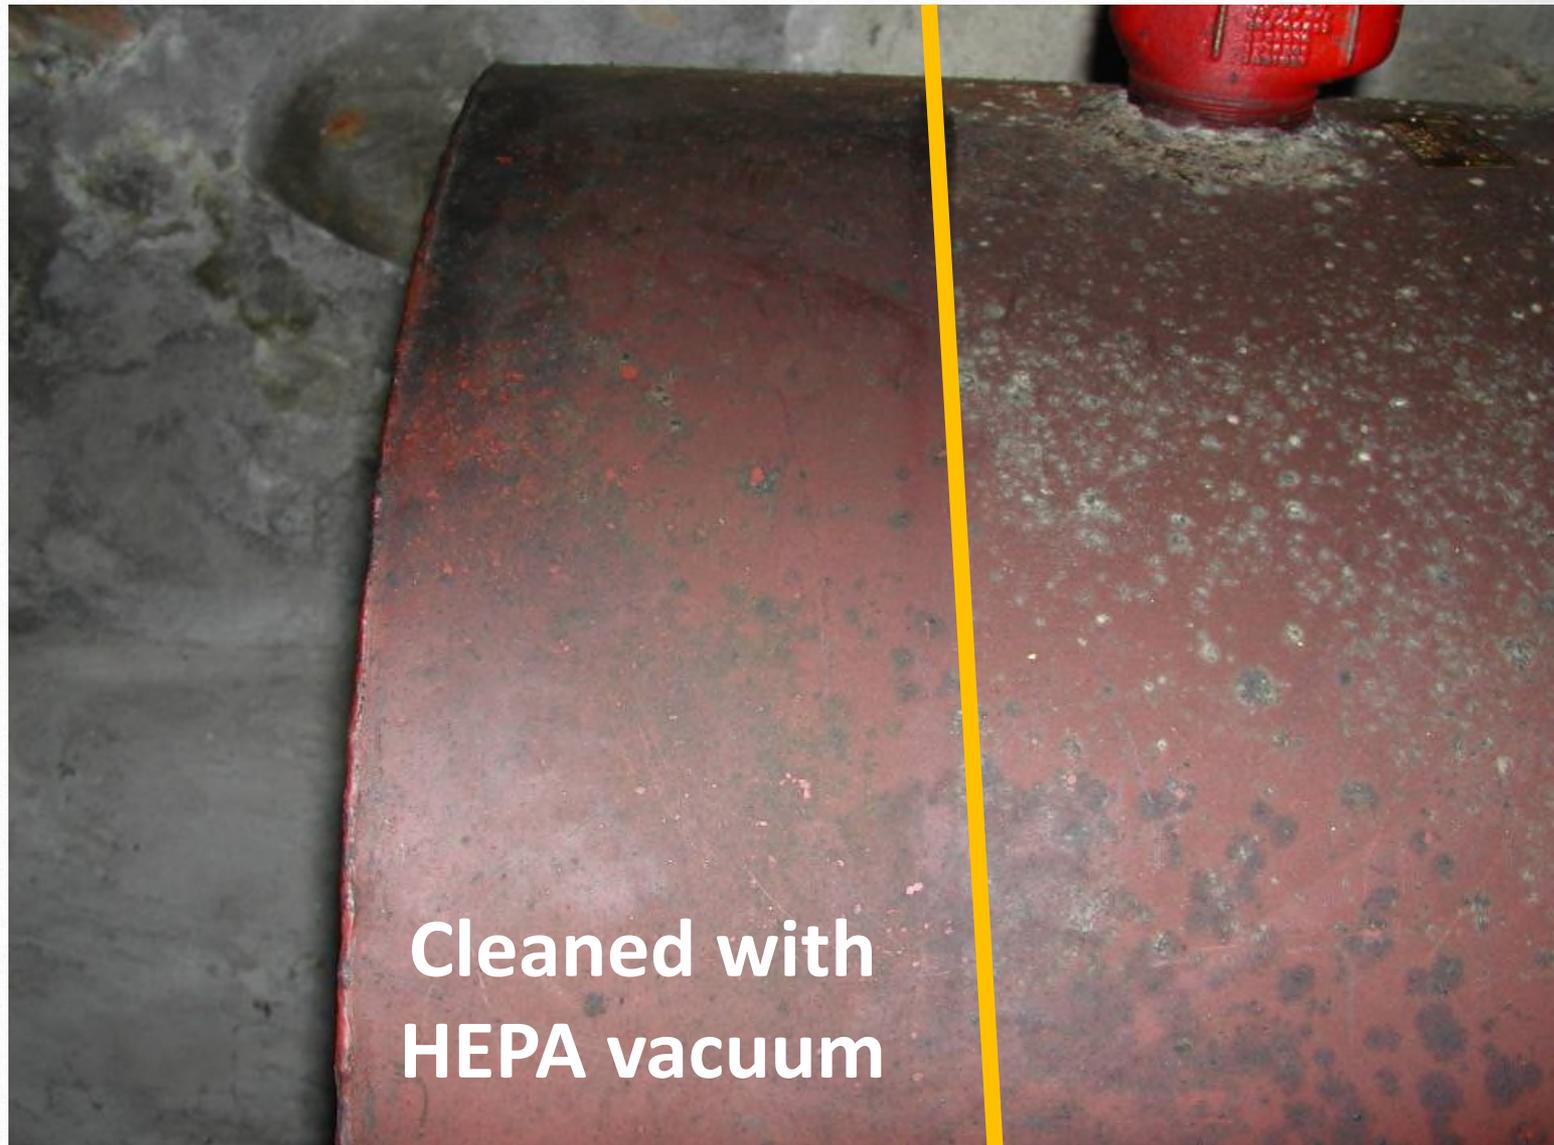

South roof

North
roof

For a
10 s
clean

Cleaning Solution

- Detergent and hot water

Assorted brushes, rags,
mist spray bottles

Do not use high
pressure sprayers

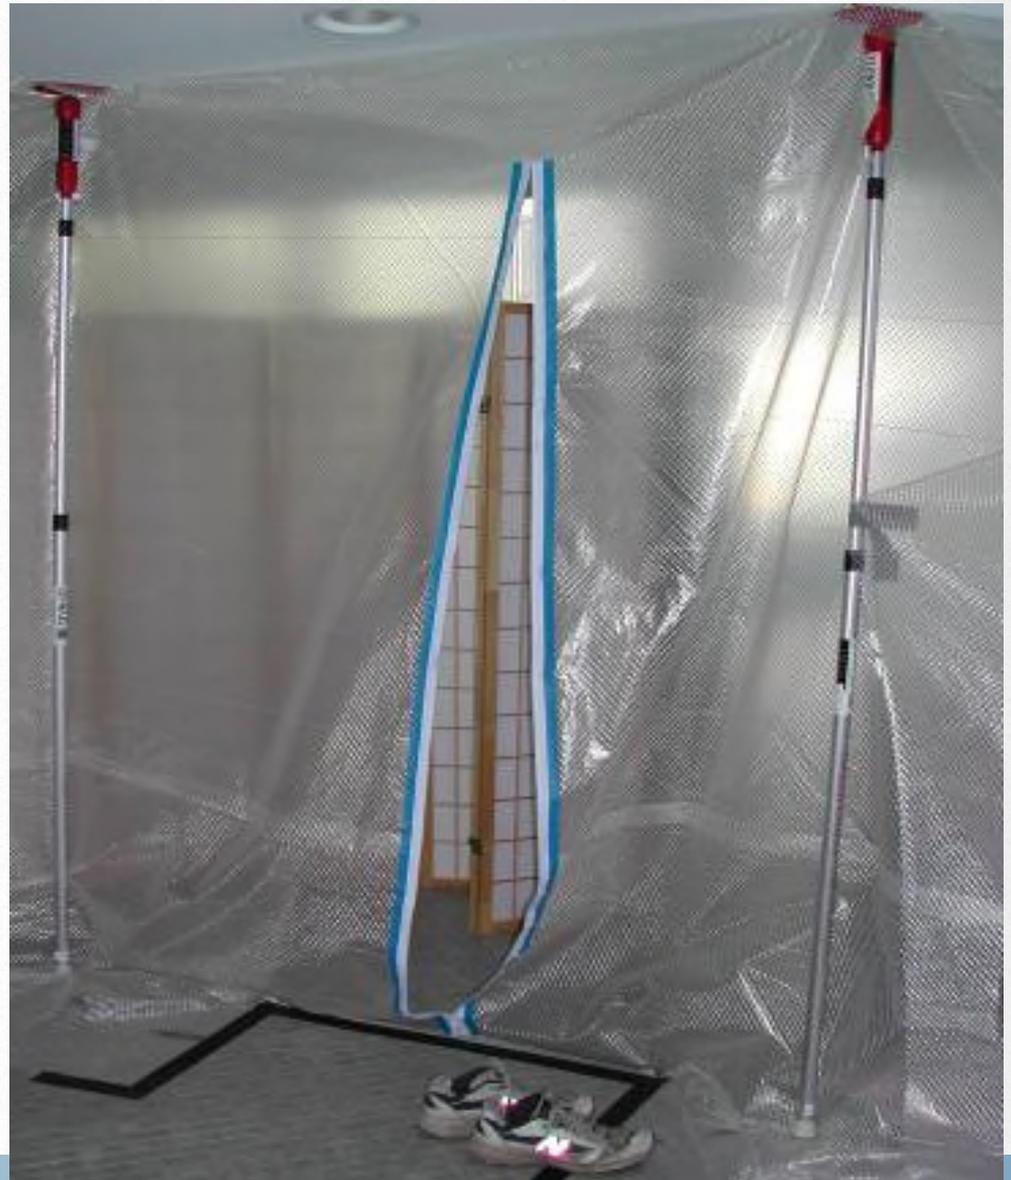

FOR BIGGER JOBS

MUST HAVE:

- Adequate respirator
- Eye protection
- Rubber gloves
- Coveralls
 - Remove or bag protective gear before leaving work area

*Containment may be needed for bigger jobs.
See EPA Guidance.*

CODE REQUIREMENTS RELATED TO MOISTURE

- 302.2 Grading and drainage.
- 304.7 Roofs and drainage.
- 304.6 Exterior walls
- 304.16 Basement hatchways
- 304.2 Protective treatment

KEY MESSAGES

- Excess moisture creates conditions that can affect health.
- Moisture in the home comes from inside and outside.
- Excess moisture in the home should be prevented through appropriate construction methods and plumbing systems, temperature control, ventilation and proper maintenance.

LEARNING OBJECTIVES

Name three health hazards in the home that are related to excessive moisture.

Identify four sources of moisture in the home.

Describe five strategies for controlling moisture in the home.
