

Chapter 5

**Appraisal Reports
and Market Studies**

5.1

General

9
10 Appraisal reports are required for all Section 232 applications with the exception of the
11 232/223(a)(7), 232/223(f)/223(a)(7), 223(d) and 232(i). Market studies must be included in all
12 appraisal reports. The market study may at times be truncated under conditions outlined in
13 Section 5.3.Q. The market study will be authored by the same person(s) who produced the
14 appraisal report and the conclusions carried throughout the appraisal report. ~~In the past,~~
15 ~~appraisal reports and market studies were required to be separate documents. Now single reports~~
16 ~~are encouraged.~~

17
18 When an appraisal ~~report~~ assignment involves complex or unusual valuation issues, the appraiser
19 and/or the Lender should consult with the Office of Residential Care Facilities (ORCF) before
20 beginning the assignment.

21
22 HUD expressly asserts its role as a regulatory enforcement agency as outlined in the
23 confidentiality provision of the Uniform Standards of Professional Appraisal Practice (USPAP).
24 Appraisers may be required to present their entire work file and fully disclose the identity and
25 source of confidential information should HUD determine a review of the appraiser's work file is
26 in order. All confidential information received either by initial request or by invoking the
27 confidentiality provision of USPAP will be kept confidential by HUD, especially with regard to
28 the "Freedom of Information Act." Any questions regarding the confidential information
29 received will be directed to the originating appraiser for clarification.

30
31 When appraisal reports do not meet the program requirements as outlined in this chapter, the
32 following remedies may be invoked:

- 33
- 34 1. Issuance of a warning letter to the lender or appraiser.
 - 35 2. Limited Denial of Participation (LDP) of an individual or company.
 - 36 3. Lender referred to the Mortgage Review Board.
 - 37 4. Appraiser referred to the state regulatory agency.
- 38

39 Chapter 2 of Section I – Handbook Introduction, addressing "Lender Relations," discusses
40 remedies against lenders in more detail.

41
42

5.2

Selection of Appraisers

43
44
45
46
47
48
49
50

The Lender is responsible for the selection and approval of appraisers and familiarizing them with the 232 insurance program guidelines. Lenders must ensure that each appraiser selected is qualified to complete the assignment by reviewing their experience, education, work quality, relevant assignment frequency, and state licenses or certifications.

In order to qualify as the appraiser, the individual must meet all of the following conditions:

51
52
53
54
55
56
57
58
59

1. personally inspect the property being appraised ~~on the date of valuation;~~
2. ~~perform~~develop the analysis, opinions, and conclusions;
3. have the necessary knowledge and experience;
4. sign the appraisal report certification as the appraiser; and
5. be a Certified General Appraiser under the appraiser certification requirements of the State in which the subject property is located, ~~as of the effective date of the appraisal report (temporary certifications are permissible).~~ Lender verification of an appraiser's current standing can be done at <http://www.asc.gov>.

60
61
62
63
64

~~These requirements do not preclude an appraiser from relying on individuals that are not state-licensed or certified to provide professional assistance (such as an appraiser trainee or an employee doing market data research or data verification) in the development of the appraisal report.~~

65
66
67
68
69

Further, the appraiser must meet all requirements of the competency rule of the USPAP. If more than one appraiser works on the appraisal report, they are each required to sign the report and a certification outlining their involvement. The appraiser's signed certification must acknowledge the roles and extent of the professional assistance provided by others.

70
71
72
73
74

The appraiser must be independent of and may not be affiliated with the loan originator, broker, developer, borrower, lender, or any individual or institution involved in any other financial role in the application. The appraisal report must be ordered and paid for by the Lender and not by the originator, broker, developer, or Borrower.

75
76
77

Note: It is acceptable for the borrower to reimburse the lender for the cost of the appraisal fee, as this may be included in the organizational fees (see Appendix 10.2.C.7.a).

78
79
80
81
82

The appraisal report must identify HUD as an ~~authorized~~intended user of the report. The ~~contract between the lender and appraiser will contain no language prohibiting contact between ORCF and the appraiser.~~intended use of the appraisal must be identified as FHA-insured financing.

5.3

Appraisal Report Requirements (Statement of Work)

83
84 A. **USPAP Compliance:** The report must be in compliance with the USPAP. Any data
85 contained in the appraisal report that is not the work of the appraiser and is from an outside
86 source is to be cited. In addition to USPAP-required items, the report will contain the
87 following deliverables:
88

- 89 1. Resume for each appraiser signing the report.
- 90
- 91 2. Copy of appraisal license or temporary permit for each appraiser signing the report.
- 92
- 93 3. Adequate photo documentation of the subject to allow a desk reviewer to get a sense
94 of the quality, condition, and adequacy of the physical plant. In the case of new
95 construction or substantial rehabilitation, exhibits such as floor plans, site plans, and
96 elevations are to be included in addition to site photographs. The exhibits should be
97 adequate to give the review appraiser a sense of what is planned. The report exhibits
98 should be clear and readable. Plans may be incorporated into the appraisal report by
99 reference (cite version or date), so long as said plans are supplied alongside the
100 appraisal report.

101
102 4. Legible copies of the subject's historical income and expense statements used in the
103 valuation.

104
105 5. Legible copies of the subject's rent rolls used in the valuation.

106
107 6. Copies of the subject's Medicaid rate letters used in the valuation. When there is no
108 rate letter, provide published methodologies, including historical, current, and
109 published proposed rates need to be factored into the Medicaid rate forecast.
110

111 B. **Timing:** The effective date of the opinion of value ~~should be~~ to be the later of the site
112 inspection date or the end-date of the most recent historic financials included in the appraisal.
113 Furthermore, the date that the designated appraiser inspected the subject property. ~~The date~~
114 ~~of valuation may not be a future date.~~

115
116 ~~For 223(f) refinancees, the appraisal report is to be submitted to ORCF by the Lender and the~~
117 ~~end-date of the most recent financials must be~~ within 180 days of the ~~appraisal report's~~
118 ~~submission date of the application to HUD. The~~ effective date. ~~may not be a future date.~~ For
119 expired appraisal reports, a new appraisal report must be submitted or granted a waiver
120 through consultation with the ORCF review appraiser. Consult with ORCF to see if a re-
121 inspection will be required.
122

123 For new construction, substantial rehabilitation and 241(a) loans, the appraisal report is to be
124 submitted to ORCF by the Lender within 120 days of the appraisal report's effective date.
125 For expired appraisal reports, a new appraisal report must be submitted or granted a waiver
126 through consultation with the ORCF review appraiser. Consult with ORCF to see if a re-
127 inspection will be required. The appraiser will indicate there is a hypothetical condition that

128 the improvements have been completed and the forecasted occupancy levels have been
129 achieved as of the appraisal report date. In addition, the appraiser must indicate the
130 timeframe necessary to achieve these projected results.

131
132 Advisory Note: When updating appraisals with new effective valuation dates, all market
133 particulars, such as Medicaid rates, competitive pipeline, new construction activity,
134 comparables, rents, and shifts in market occupancy or census need to be contemporaneous
135 with the date of value.
136

137 C. **Purpose & Use of the Appraisal Report and Definitions:** The purpose of each appraisal
138 report is to provide the Lender and ORCF an opinion of the fee simple “Market Value of the
139 Total Assets of the Business” (MVTAB) for the subject property. ~~The report will be used by~~
140 ~~the Lender and ORCF in the underwriting of a~~In cases where the facility is encumbered by a
141 non-identity of interest lease, both the fee simple and leased fee values are to be provided. A
142 leased fee value will be used for informational purposes, not for loan sizing. The use of the
143 report will be for underwriting of an FHA-insured mortgage.
144

145 ~~The Lender will specifically inform the appraiser if the appraisal report is for another purpose.~~
146

147 D. **Definition of Market Value of the Total Assets of the Business (MVTAB):** “The market
148 value of all the tangible and intangible assets of a business as if sold in aggregate as in a
149 going-concern” (*The Dictionary of Real Estate Appraisal, ~~Fourth~~Sixth Edition, Appraisal*
150 *Institute*). The appraiser is hereby instructed to exclude any business assets (such as holdings
151 or investments, working capital, accounts receivable, and accounts payable) that are separate
152 from the real estate. Implicit in this definition of the MVTAB is the definition of Market
153 Value which is defined below.
154

155 **Definition of Market Value:** The most probable price that a property should bring in a
156 competitive and open market under all conditions requisite to a fair sale, the buyer and seller
157 each acting prudently, knowledgeably, and assuming the price is not affected by undue
158 stimulus. Implicit in this definition is the consummation of a sale as of a specified date and
159 the passing of title from seller to buyer under conditions whereby:
160

- 161 1. buyer and seller are typically motivated;
- 162
- 163 2. both parties are well informed or well advised, and each acting in what they consider
164 their own best interest;
- 165
- 166 3. a reasonable time is allowed for exposure in the open market;
- 167
- 168 4. payment is made in terms of cash in U.-S. dollars or in terms of financial
169 arrangements comparable thereto; and
- 170
- 171 5. the price represents the normal consideration for the property sold unaffected by
172 special or creative financing or sales concessions by anyone associated with the sale.
173

174 (*Office of the Comptroller of the Currency, 12 CFR Part 34.42g*)

175
176 The MVTAB differs from a “Going-Concern Value” in that it assumes a sale (see
177 definition of market value above). The appraiser’s projection of income and expenses
178 should include any applicable resets of rates or increases in real estate taxes that would be
179 triggered by a sale. These resets will vary from one locality to another and may include a
180 tax reassessment, or a reset of the Medicaid reimbursement rates.

181
182 In developing the MVTAB, the appraiser is being asked to mimic the processes of the
183 market and estimate the most probable sales price of the going-concern. If the property is
184 currently under contract or has recently sold under normal arm’s length market
185 conditions, any departure from that price will be scrutinized. The assumption is that if
186 the property has been adequately exposed to the market, the purchase price is a strong
187 indicator of the price the market will bear.

188
189 E. **Extraordinary Assumptions:** Extraordinary Assumptions should be used infrequently and
190 when used, must be prominently outlined in the appraisal report.

191
192 F. **Jurisdictional Exceptions:** Jurisdictional exceptions should not be invoked and are not
193 required in order to comply with any instructions contained in this chapter.

194
195 G. **Hypothetical Conditions – 223(f):** ~~Typically, the only Assumptions in a~~ Every 223(f)
196 appraisal report should ~~be the completion of~~ assume that the proposed repairs/construction:
197 ~~On rare occasions, there may need to be other assumptions, such as the execution of a~~
198 ~~proposed land lease. It is not appropriate to assume~~ have been completed. It is permissible
199 to make the assumption of stabilized operations ~~if the property is not at stabilized, without~~
200 ~~accounting for the impact on the value associated with~~ as long as the costs of reaching
201 stabilization.

202
203 ~~The valuation should not be based on any significant change in occupancy, unit mix, bed~~
204 ~~configuration, room rate increases, or expense reductions that would require an extended~~
205 ~~period to implement. The appraised value should reflect the subject’s configuration and~~
206 ~~economics on the date of appraisal report, but with consideration to increases in income,~~
207 ~~occupancy, or decreases in expenses that could be implemented immediately by a typical~~
208 ~~buyer (but these changes must be fully supported by the market and discussed in the~~
209 ~~appraisal report). It is recognized that occupancy levels can vary substantially from day to~~
210 ~~day, so while the occupancy of the facility on the date of inspection should be considered, the~~
211 ~~focus should be on forecasting achievable occupancy for the 12 months following the date of~~
212 ~~value based on the subject’s historical occupancy, market area dynamics, and anticipated~~
213 ~~changes in the market.~~

214
215 ~~In cases where there are proposed~~ have been accounted for as follows: The completion of the
216 repairs, the appraisal report will conclude an “as completed” value, making a hypothetical
217 assumption that all proposed repairs are completed might have impacts on the operations.
218 ~~The appraisal report should indicate the dollar amount of the repairs assumed and give a~~
219 ~~general overview of what items are included. This is to ensure the consistency of the~~
220 ~~appraisal report with the loan underwriting.~~ The completion of the repairs should be

221 ~~considered in determining~~ rents, ~~vacancy, vacancies, census mix (i.e., payor mix),~~ expenses,
222 ~~and depreciation; etc.;~~ however, these shifts in operations will likely occur over time. ~~The~~
223 ~~appraisal report should not make the assumption that the new stabilized levels have been~~
224 ~~achieved. Instead, the~~The value should reflect what a typical buyer would pay for the current
225 operations on the valuation date as if the repairs were finished.

226
227 ~~ORCF may, at its discretion, allow a Lender to underwrite a 223(f) loan that assumes a shift~~
228 ~~in operations or~~ and the resulting changes in operations can begin. Keep in mind that market
229 participants generally recognize some value in unrealized operational potential, but not to the
230 same extent as proven operations. When the appraiser concludes the repairs will have an
231 impact on operations or there is a change in the number or type of units (as is done for
232 construction loans). In these cases, the Lender will have the appraiser determine what the
233 stabilized occupancy of the reconfigured project will be once the repairs are completed. A
234 “truncated” market study as outlined in 5.3.Q will not be allowed. The, the appraiser will
235 also supply an analysis of the cost to reach costs (in time, expense, lost income, risk, etc.) of
236 reaching the new levels of operation, showing the forecasted monthly cash flows until
237 stabilized occupancy has been achieved. ~~This analysis is required even if the monthly Net~~
238 ~~Operating Income (NOI) never drops below \$0. The appraiser will assume the repairs have~~
239 ~~been completed and the~~ The concluded costs to reach stabilization must be deducted from the
240 market value based on the hypothetical condition of stabilized operations, to arrive at the
241 current market value. Any of the forecasted operational changes must be fully supported by
242 the market and discussed in the appraisal report. The ORCF Review Appraiser will closely
243 analyze any forecasted shifts in operations that have not yet been achieved. Additionally, the
244 impact of the operational changes need to be accounted for when selecting a capitalization
245 rate and discussed within the capitalization rate analysis in the appraisal report. The appraisal
246 will need to state the hypothetical conditions clearly and specifically. The appraisal report
247 should indicate the dollar amount of the repairs assumed and give a general overview of what
248 items are included. This is to ensure the consistency of the appraisal report with the loan
249 underwriting. ~~stabilized occupancy has been achieved as of the appraisal report date~~When
250 operational changes are expected, a “truncated” market study as outlined in 5.3.Q will not be
251 allowed. The use of other hypothetical conditions should be used with caution.

252
253 **H. Hypothetical Conditions – New Construction, Substantial-Rehabilitation and 241(a):**

254 For New Construction, Substantial Rehabilitation and 241(a) loans, the appraisal report is to
255 conclude an “As Completed and Stabilized Value”, making a hypothetical assumption that all
256 improvements are completed and the appraiser’s forecasted occupancy has been achieved.

257
258 For all ORCF appraisal reports, income and expense conclusions are to be as of the effective
259 date of the appraisal report and are not to be trended to the projected date of stabilization.

- 260
261 1. **Operating Deficits:** The ~~Appraiser~~Lender is to perform an operating deficit
262 calculation when the subject property is not currently able to achieve the NOIs
263 forecasted in the appraisal report. The format of the IOD is dictated within the Initial
264 Operating Deficit Escrow Calculation Template (Form HUD- 91128-ORCF). More
265 information on Operating Deficits can be found in Production, Chapter 2 and
266 Appendix 2.1. The Initial Operating Deficit worksheet and analysis will not typically

267 [appear in the appraisal for a 223f loan.](#)

- 268
- 269 2. **Additional Instructions:** When portions of a project already exist (i.e., Section
- 270 241(a) and substantial rehabilitation loans), the appraiser will also provide an “As Is”
- 271 Market Value of the Total Assets of the Business. The “As Is” MVTAB should not
- 272 assume repairs are completed. Do not make a hypothetical assumption that the
- 273 subject is operating at stabilized occupancy if it is not.
- 274

- 275 I. **Regional Description:** This section should describe the region (typically the U.S.
- 276 Census-defined Metropolitan Statistical Area- MSA when in urban and suburban areas)
- 277 relevant to the property, and should include:
- 278

- 279 1. An overview of recent and forecasted population and household growth;
- 280
- 281 2. A description of the economic base of the area including recent and forecasted job
- 282 growth statistics, stability of local industries, major employers, and current and
- 283 historical unemployment levels.
- 284

- 285 J. **Neighborhood Description:** In discussing the neighborhood, the appraiser should include
- 286 the following:
- 287

- 288 1. A general discussion of the neighborhood’s demographics, new development,
- 289 economic and employment trends, and a summary of the neighborhood’s relevant
- 290 strengths and weaknesses, and their influence on the desirability and remaining
- 291 economic life of the subject. [To ensure compliance with all applicable](#)
- 292 [nondiscrimination laws, the appraiser must not consider race, color, religion, national](#)
- 293 [origin, sex \(including gender identity and sexual orientation\), marital status, familial](#)
- 294 [status, age, receipt of public assistance income, or disability.](#)
- 295
- 296 2. A description of neighborhood land uses in general, including predominant age,
- 297 quality, and condition of the properties, and their influence on the subject.
- 298

- 299 K. **Site Description:** In the analysis and description of the site the appraiser should:
- 300

- 301 1. Include a reference to the panel number and date of the FEMA map reviewed and if
- 302 the site is partially or fully within a designated Special Flood Hazard Area: [\(100-year](#)
- 303 [floodplain\) or the 500-year floodplain.](#) Be careful to differentiate between Zone X
- 304 and Shaded Zone X flood hazard areas.
- 305
- 306 2. Obtain a copy of the land survey [\(if available\)](#) from the lender and discuss the effect
- 307 of easements, encroachments or encumbrances on the subject site.
- 308
- 309 3. Identify the immediately adjacent land uses in all directions and indicate if they have
- 310 a negative impact on the site.
- 311
- 312 4. Indicate the number and adequacy of parking stalls on site, and if off-site parking is

313 utilized.

314
315
316
317
318
319
320
321

352
353
354
355
356
357
358

L. **Zoning and Conformance:** The appraiser should identify the zoning code. Zoning requirements concerning density, unit size, parking, etc., should be analyzed for the subject property. A statement should be made as to whether the property is a legal-conforming, legal non-conforming, or an illegal use, and include the issues of non-conformance, if applicable. This need not be original research on the part of the appraiser, since the Lender will be supplying their own evidence of zoning compliance with their application.

M. **Improvement Description:** The appraiser is to provide a description of existing and any planned improvements. This section should include the estimate of total building area. Include descriptions of living areas, patient areas, nursing or therapy units, common areas shared by residents and support areas. Include an inventory of room type (private, semi-private and ward) or unit mix as well as a description of their restroom and bathing accommodations.

Color photos should generally include, but not be limited to, site access, common areas, nurse’s stations, hallways, rehab space, parking, building exteriors, and interior views of typical units.

Note: Although it is recognized to be outside their area of expertise, the appraiser is encouraged to note any violations of building, health, fire, or safety codes that were suspected at the property. ORCF understands the appraiser is not an accessibility expert; however, if an accessibility issue is obvious, a detailed description (inclusive of pictures) should be provided.

Advisory Note: When analyzing properties that do not have all the necessary facilities or services on-site or that share such functions with an adjoining or affiliated facility, the appraisal report must not assume that the current sharing agreements will continue. By way of example, such shared facilities might provide for dining and food services, laundry, treatment space, management, parking, maintenance, etc. The appraisal report must recognize the property as an operation with deficiencies. For appraisal report purposes a provider of a missing service can be considered an off-site vendor and apply market expenses to that service, not recognizing any below-market expenses granted for existing relationships. The cost of supplying missing services must be clearly defined in the appraisal report. It is noted that off-site costs are typically higher than the costs for similar services with all in-house operations. If the appraisal report assumes an off-site vendor the capitalization rate should also consider the reduced ability to control expenses or other related risks. The appraisal report may hypothetically assume that deficiencies are cured if the cost of renovations and or additions required to provide those services have been accounted for in the valuation. Such assumptions are limited to physical and legal restrictions. Assumptions about construction need to account for any lost income from the change in operations and for time and vacancy needed to implement the change. At that point the expense to operate an in-house good or service should be abstracted from similar facilities with in-house operations.

359 N. **Remaining Economic Life:** The appraiser will estimate the remaining economic life of the
360 improvements. Remaining Economic Life is defined as: *“The estimated period during which*
361 *improvements will continue to represent the highest and best use of the property; an estimate*
362 *of the number of years remaining in the economic life of the structure or structural*
363 *components as of the date of the appraisal report; used in the economic age-life method of*
364 *estimating depreciation.”*¹
365

366 The analysis should discuss the following three types of depreciation: physical deterioration,
367 functional obsolescence, and economic or external obsolescence.
368

369 1. **Physical Deterioration.** In determining the remaining economic life, the appraiser
370 will include an estimated economic life and effective age. At a minimum, the
371 economic life estimate from the Marshall & Swift Cost Estimating Manual or
372 equivalent should be quoted. Other published life estimates may also be quoted when
373 available. While HUD will require a reserve account to continually maintain the
374 building, the appraisal report should not assume any specific type of ownership or
375 financing when determining the probable life. Maintenance done in the past may be
376 considered in determining the effective age, but assumptions about future
377 maintenance should be tied to the amount of repairs that can be funded with the
378 “market” reserve expense concluded in the appraiser’s income approach.
379

380 2. **Functional Obsolescence.** Lives can be extended or shortened based on the presence
381 or absence of functional obsolescence as compared to other facilities in the subject’s
382 market. For nursing facilities, these comparisons may include the number of private
383 rooms compared to semi-private or wards, shared toilets/showers, quality and location
384 of therapy space, size of common areas, corridor width, etc. For assisted living
385 facilities, the comparisons alternately might focus on building amenities, common
386 space, and room configurations.
387

388 3. **External or Economic Obsolescence.** Again, lives can be extended or shortened
389 based on external factors. Items to consider here may include but are not limited to
390 long-term population trends, stage of neighborhood life cycle, type of license and
391 certifications, the likelihood of new competition, whether supply is controlled by
392 State Certificates of Need (CON), the subject’s relative competitive position in the
393 market, hospital referrals, Medicaid reimbursement issues, alternate highest and best
394 uses, etc.
395

396 O. **On-Site Services.** The appraiser is to provide a detailed description of the services and
397 personal care levels to be provided by the subject project, including but not limited to the
398 number of meals, housekeeping, laundry facilities, transportation, activities, therapies,
399 assistance with activities of daily living (ADLs), etc. For multiple use facilities, the services
400 offered or available for each resident group (e.g., board and care, assisted living, dementia,
401 skilled nursing) should be segregated in the narrative.
402

403 P. **Highest and Best Use.** The Highest and Best Use is to be developed according to USPAP.

¹ The Dictionary of Real Estate Appraisal, 5th Edition, Appraisal Institute

404 It is to include both the highest and best use “as vacant” and “as improved.” Properties are to
405 be appraised based on their highest and best use. Usually this use will be the same as the
406 intended use of the property; however, when there is a conflict between the two the Lender or
407 appraiser should approach ORCF for guidance on how to approach the valuation for their
408 particular circumstances.
409

410 **Q. Market Analysis.** For New Construction, Sub-Rehabilitation and 241(a), a complete market
411 study must be part of the appraisal report. Appraisal reports for 223(f) refinances may supply
412 a “truncated market analysis” if the project meets specific criteria. The case for submitting a
413 truncated analysis should be presented in sufficient detail for the ORCF reviewer to arrive at
414 the same conclusions.
415

- 416 1. A truncated market study is allowed if:
- 417 a. The property is not adding beds/units and no substantial shift in the subject’s
418 census mix has been assumed.
419 At the time of the appraisal report, the property is operating at and is expected
420 to continue operating at its estimated stabilized occupancy into the foreseeable
421 future.
 - 422 b. There are no anticipated or foreseeable increases in supply that will
423 significantly alter the subject’s competitive position or performance.
 - 424 c. There are no anticipated decreases in demand in the foreseeable future for the
425 type of services offered at the subject.
426
- 427 2. With a truncated analysis it is not necessary to quantify (put a number to) the current
428 demand level or “unmet need” in the primary market area. A truncated market
429 analysis will include the following:
- 430 a. A definition of who is the subject’s target market(s).
 - 431 b. A definition and explanation of the Primary Market Area (PMA) including a
432 discussion of geographic, demographic, and economic influences on and
433 characteristics of the target market. Include a map showing the boundaries of
434 the PMA. To ensure compliance with all applicable nondiscrimination laws,
435 the appraiser must not consider race, color, religion, national origin, sex
436 (including gender identity and sexual orientation), marital status, familial
437 status, age, receipt of public assistance income, or disability.
 - 438 c. A description of the primary competition within the market area. Report each
439 competitor’s name, location, year built, and number of units/beds. If
440 available, also report on unit type/sizes, payor mix, private pay bed/room
441 rates, any significant shift in rates within the recent past, vacancy, recreational
442 facilities and other amenities, condition of improvements, additional fees for
443 personal care levels and/or second occupants, etc.
 - 444 d. A description of the local research into proposed construction or expansion of
445 competitive facilities. For States that require certificates of need (CON), or its
446 equivalent, the state agency should be contacted to determine the current and
447 future intentions for granting additional beds or units in the primary market
448 area that would represent additional competition. The appraisal is to identify
449 the person(s) contacted regarding new supply.

450
451 3. Whenever truncated studies are not appropriate, a complete market analysis that
452 conforms to the following rules must be included in the appraisal report.

- 453
454 a. **Define the Primary Market Area (PMA).** PMA in this document is defined
455 as “the area that a majority of the project’s demand will be drawn from
456 considering physical barriers, psychological barriers, density of population,
457 linkages, and the location of competing facilities.

458
459 **Advisory note**~~Note~~: The need to be nearby friends, family, physician,
460 ~~churchhouses of worship~~, among other familiar services is a primary
461 determinant for the selection of most senior housing and nursing facilities.
462 Typically, 60 to 80 percent of the demand for senior housing and / or a
463 nursing facility will come from the PMA. The analyst should study the
464 market and determine natural boundaries, ~~social or economic boundaries~~the
465 locations of interstates and large highways, the locations of hospitals, as well
466 as other factors that generally define the PMA. The analyst should also
467 determine if nearby areas have sufficient supply and would be a significant
468 area to draw potential patients. Certain services that the subject may offer
469 may also extend the PMA due to the lack of services in that area, ~~therefore,~~
470 Therefore, the services the subject may offer should also be considered.

471
472 Market area analysis for long term care and seniors housing should focus not
473 only on seniors but also on adult children who may be caregivers for an
474 elderly person residing outside the market area.²² When defining the
475 boundary of a market area, the analyst must include:

- 476 i. A description and map of the geographic boundaries of the subject’s
477 market area and a discussion of any physical or psychological barriers
478 of the primary market area.
479 ii. The locations and a map showing all facilities (supply) that offer the
480 same care as the subject facility (IL, AL, MC, SN, etc.) must be
481 provided for the primary market area as well as for adjacent secondary
482 market areas where a competitor’s PMA overlaps the subject’s PMA
483 (existing, under construction, and planned).
484 iii. A general description of the localities from which the occupants in
485 competing projects originate, if available. If the subject is an existing
486 project with a proposed addition or a replacement project, a resident
487 origin analysis should be performed.
488 iv. Location of significant referral sources.

- 489
490 b. **Define the Target Resident.** The report must include a qualitative
491 description of the target resident and the type of housing and care offered by
492 the subject. Include the ~~economic and demographic~~ characteristics of the
493 target market (subject residents): income levels, wealth and assets, age,
494 physical and/or mental limitations, ~~and other similar factors~~.

496 **Advisory Note** – The economic and demographic focus for the target market
497 may be different for assisted living than for memory care or skilled nursing
498 facility. For example, income, wealth and assets are more important for
499 private pay assisted living than for skilled nursing for which Medicare and/or
500 Medicaid are the primary payor.
501

502 c. **Describe the Current Inventory and Supply Count.** While all facilities
503 offering the same type of care as the subject will be mapped as described
504 above, only those competing for the same Target Resident as the subject
505 facility need to be identified as competitive supply. These direct competitors
506 are to be used in forecasting unmet or displaced demand, rates, occupancy,
507 resident/patient mix etc. Any beds/units identified in the PMA, but not
508 included in the competitive supply must describe the reasons why they will
509 not compete directly with the subject facility for the same Target Resident.
510

511 i. A datasheet for each of the subject’s primary competitors is to include
512 the following information:

- 513 1. Project name, location, number of unit/beds.
- 514 2. Operated beds versus licensed beds. Operated beds are those
515 beds that are actually available and set up for immediate
516 occupancy. Many nursing homes and assisted living facilities
517 do not operate all of their licensed beds. A description of why
518 the number of operated beds varies from the number of
519 licensed beds should be provided,
- 520 3. Private pay rates by unit type, and level of services. Provide
521 information on the base rate and any added costs for optional
522 services, as applicable.
- 523 4. Typical census mix by payor source (i.e. private pay, Medicare,
524 Medicaid, HMO, VA, etc.).
- 525 5. Age and condition of the competing project, with consideration
526 of aspects that may be substandard or obsolete in terms of
527 physical plant, services, amenities, etc.
- 528 6. Occupancy rates – indicate if the occupancy percentage is for a
529 point in time or the average for the year.
- 530 7. Existence or extent of concessions.
- 531 8. The level of competitiveness in comparison to the subject
532 should be discussed.
- 533 9. Photographs should be provided.
- 534 10. Contact information for the person who supplied the data. The
535 administrator/executive director/marketing director should be
536 interviewed for each primary competitor as part of the
537 confirmation process.

538 ii. In addition to the datasheets presented for the primary competitors, the
539 following information is to be presented.

- 540 1. Describe any off-line product.

- 541
542
543
544
545
546
547
548
549
550
551
552
2. Give the total number of beds/units (of the types housed within the subject) in the PMA, by type of care.
 3. Description of turnover rates (length of resident stays) within the PMA.
 4. Supply an occupancy survey for the PMA of the product type offered by the subject. Include an explanation of any vacancy or absorption problems in the market. Supply any information gathered on waiting lists.
 5. Describe the absorption experience of any recently completed projects, discussing the level and extent of pre-sales, move-ins, move-outs, and net absorption.

553
554
555
556
557
558
559
560

d. **Rate Determination.** This may be done within the market analysis section or the income approach section. The analysis should contain a determination of the appropriate rates for the subject. Differences in pricing strategies should be accounted for. For example, some facilities may charge lower base shelter fees with higher care fees, while others will quote higher shelter fees with lower care fees. The rate conclusions for the subject must show a consistent pricing strategy between shelter and care charges.

561
562
563
564

The report should also include, as applicable, a discussion of the current levels of public payments by the State relative to the typical “private pay” rate for the same level of shelter, care, and services.

565
566
567
568
569
570
571

e. **Alternative Care and Service Systems.** The demand analysis should discuss the impact of other care and housing options that cater to the same target populations as the subject. These may include: home healthcare, continuing care retirement communities (CCRCs), assisted living facilities (ALFs), board and care facilities, congregate care facilities, retirement service centers, independent living facilities, nursing facilities, etc.

572
573
574

f. **Characteristics of Pipeline Activity.** The following information should be provided in the report for each project in the construction pipeline or planning process:

- 575
576
577
578
579
580
581
582
- i. Total number of beds currently under construction or proposed, by unit size or type of accommodation. Provide the projected rates if known. If proposed, what is the likelihood of being developed.
 - ii. Typical types of services to be offered.
 - iii. While published reports can be cited, the appraiser should make local inquiries and must contact the local planning department. Provide contact information for data source.

583
584
585
586

g. **Licensing and Certificate of Need.** For intermediate and skilled nursing facilities, provide a narrative discussion and description of the licensing and Certificate of Need requirements and processes or any moratoriums imposed by the State in which the project is to be located. The discussion should focus

587 on any required or recommended demand or need models and any other
588 specific licensing requirements that would impact demand for the proposed
589 project. Where CON requirements significantly curtail the building of new
590 facilities, the appraiser will describe the state’s rules relating to “transfer” of
591 CON beds (e.g., must the transfer be within the same county? Must the
592 transfer be from an over-bedded county to an under-bedded county? If data is
593 discoverable, what are typical arms-length unit prices for these transactions?).
594

595 Certificate of Need restrictions, moratoriums on new development, and in
596 particular licensed supply versus operated supply, must be considered when
597 forecasting unmet or displaced demand in the PMA.
598

599 **h. Demand Estimate and Analysis.** The market study report should:

- 600 i. Estimate the unmet demand, or oversupply for the unit type(s) offered
601 by the subject.
602

603 Rather than only comparing the subject’s saturation rate to the rates of
604 other markets, the market study should quantify the demand in
605 numbers of units/beds. The unmet demand should be determined for
606 the current market and include a forecasted demand for five years in
607 the future. The demand estimate should show the number of
608 units/beds by payor source (private pay, Medicare, Medicaid, etc.).
609 For independent living, assisted living or memory care, the demand
610 estimate must be based on the number of prospective Target
611 Residents/Patients meeting the ~~relevant economic and demographic~~
612 ~~criteria (sufficient incomes, age, etc.)~~ **income and age requirements** that
613 reasonably would be expected to require the level of care provided at
614 the subject. As discussed subsequently, a demand estimate for nursing
615 homes would rarely be based on ~~demographic~~ criteria such as
616 sufficient incomes, ~~and~~ age, ~~etc.~~, but would be based on need by type
617 of insurance such as Medicare, Medicaid, managed care or commercial
618 insurance. Supply or a portion of a unit at a competitor that does not
619 compete for the Target Resident/Patient population should be excluded
620 as competitive units as part of the unmet or displaced demand
621 calculation.

- 622 1. The demand analysis and forecast for senior housing (assisted
623 living, memory care, group homes, independent living etc.)
624 should include:
- 625 a. Current and forecasted population of the target group(s)
626 by age cohort and the proportion of the population each
627 group comprises.
 - 628 b. Current and forecasted estimates for the Target
629 Resident group of social, physiological, psychological
630 limitations that require intermediate or skilled care.
 - 631 c. Current income band of prospective Target Residents
632 demand segment, including rent to income ratio

633 analysis, if necessary. Note: the monthly rents used in
634 the target income calculations should be based on the
635 appraiser’s judgement, but a full justification is required
636 if minimum rents are used. In addition, the weighted
637 average of the level of care fees must be included in the
638 monthly rent determinations for the target income
639 calculations.

- 640 d. Discuss the impact of anticipated population changes
- 641 on the demand for this project.
- 642 e. Discuss changes in the population (including migration
- 643 patterns) of adult children of the frail elderly, if
- 644 applicable.
- 645 f. Indicate the proportion of secondary demand expected
- 646 to come from outside of the PMA. Secondary demand
- 647 should not be confused with the impact on demand tied
- 648 to the influence of adult children or family members.
- 649 Secondary demand is the portion of the demand that
- 650 cannot be directly tied to the influence of primary
- 651 market area. Do not double count in-migration tied to
- 652 the influence of adult children with the percentage
- 653 coming from outside the PMA, as those
- 654 residents/patients are usually accounted for in the
- 655 population estimates used in the primary demand
- 656 calculation.
- 657 g. Include demographic data sheets in the addendum.

658 2. The demand analysis and forecast for nursing facilities should
659 include:

- 660 a. Current and forecasted population of the target
- 661 group(s) by age cohort and the proportion of the
- 662 population each group comprises.
- 663 b. Current and forecasted estimates for the Target
- 664 Resident/patient group of social, physiological,
- 665 psychological limitations that require intermediate or
- 666 skilled care.
- 667 c. If a significant portion of the Target Resident/patient
- 668 census mix is private pay or Medicaid, include an
- 669 income range for the prospective Target
- 670 Resident/patient demand segment, including rent to
- 671 income ratio analysis.
- 672 d. Discuss the impact of anticipated population changes
- 673 on the demand for this project.
- 674 e. Discuss changes in the population (including migration
- 675 patterns) of adult children of the frail elderly, if
- 676 applicable.
- 677 f. The demand forecast for specialized residential
- 678 medical services may need to be based on the number

679 of skilled nursing discharges from those hospitals
680 serving the primary market area.

- 681
- 682 ii. Include an estimate of the absorption period needed for the project to
683 reach sustaining occupancy. The absorption estimate should be tied to
684 the analysis of demand, not just the historical experience of comparable
685 buildings.
- 686 iii. When the supply is compared to demand it is acceptable to account for
687 enough vacancy for the market to operate fluidly. Since the point of a
688 supply analysis is to quantify the capacity of the existing inventory, it
689 is not appropriate to discount the supply count for vacancies beyond a
690 basic frictional vacancy. Frictional vacancy is defined as the
691 minimum vacancy needed for a market to operate in an orderly
692 fashion.
- 693 iv. Because the focus of the supply count should be on capacity, the
694 market study will discuss the existence and impact of any off-line
695 product in the PMA. An off-line unit is one that is not being operated
696 because of lack of market demand for the unit. Facilities that are
697 licensed for more beds than they operate may or may not count as off-
698 line units, depending on the reason for operating fewer beds.

- 699
- 700 i. **Data, Estimates, and Forecasts.** The analysis should document the methods
701 and techniques used to develop all estimates and forecasts; and provide
702 adequate citations on the sources of all data, estimates, and forecasts. The
703 data and estimates provided should be relevant and current.

704

705 The demand model utilized by the appraiser or market analyst must be
706 supported by the case studies demonstrating the relevance of the demand
707 model for estimating unmet or displaced demand regardless if the demand
708 methodology is based on a published model or it was independently
709 developed by the appraiser or market study analyst.

- 710
- 711 j. **Subsidized or Restricted Rents.** For projects with subsidized or restricted
712 rent, such as Low Income Housing Tax Credits (LIHTC), ~~For LIHTC~~
713 ~~projects,~~ the market study is to provide an estimate of net demand, based on
714 potential income-eligible ~~resident~~ residents. In many states, income eligibility
715 is satisfied when a resident is defined as income-eligible under Medicaid.
716 Otherwise, an income-eligible resident is one whose income does not exceed
717 the maximum permitted by the affordability restrictions but who has sufficient
718 minimum income to pay the LIHTC subsidized or restricted rent without
719 being overburdened ~~by the amount of the restricted rent.~~ Some LIHTC
720 restricted rent projects have other forms of assistance (such as Section 8 rental
721 assistance or soft subordinate financing) to further reduce rents and thus
722 expand the number of income-eligible tenants.

723

724 R. **Valuation.** The appraisal report should establish the subject's market value supported by the

725 reconciliation of the income approach, the sales comparison approach, and cost approach (if
726 applicable).

727
728 Advisory Note: Special consideration will need to be given to properties (whether the
729 subject or the comparable sales) located within an incentive zone, such as an Opportunity
730 Zone. These might offer benefits to an owner of a property without changing the facility's
731 Net Operating Income. It is up to the appraiser to determine if the market recognizes the
732 benefits and if special adjustments are warranted within each approach.

- 733
734 1. **Land Valuation.** In cases where no cost approach is developed, the appraiser is not
735 required to estimate the value of the land.

736
737 The appraiser will base their land value on the highest and best use as if vacant. A
738 minimum of three comparable sales should be used. The appraiser should ensure that
739 the comparable transactions were arm's-length between buyer and seller and indicate
740 how the sales data was verified. An explanation of the adjustments should be given
741 in the narrative. If there is a recent or pending sale of the subject land, the sales price
742 must be analyzed. This is a USPAP requirement.

743
744 For guidance on appraising properties involving ground leases, refer to Section 5.4.

745
746 For New Construction, Substantial-Rehabilitation and 241(a) loans, the appraiser will
747 also supply the "Market Value of the Site Fully Improved". This is a HUD-specific
748 value that is defined in HUD Handbook 4465.1. The "Market Value of the Site Fully
749 Improved" essentially assumes the site is ready for development and specifically that:

- 750
751 a. All necessary utilities are available to the site.
752 b. Any environmental conditions needing to be corrected prior to construction
753 have been resolved.
754 c. Any required demolition has occurred.
755 d. There are no unusual site costs or that the conditions leading to such costs
756 have been corrected.
757 e. All off-site improvements have been completed.

758
759 The extra costs associated with these site conditions need to be kept separate from the
760 land value for correct loan sizing on Form HUD-92264a-ORCF. The "Market Value
761 of the Site Fully Improved" is a HUD-specific value used in the derivation of the
762 HUD replacement cost of the project. A conventional market value of the site as if
763 vacant must also be derived by the appraiser when developing a cost approach, in
764 order to keep that value strictly a market value, not a HUD-specific value. In cases
765 where all of the above stated assumptions are already true, there may be no difference
766 between the "Market Value of the Site Fully Improved" and the site value as if vacant
767 prepared in the normal non-HUD way.

- 768
769 2. **Cost Approach to Valuation.** The Cost Approach is typically more relevant in the
770 case of new construction or recently completed properties. This approach may be

771 eliminated with older properties when not a reliable indicator of value; however, anot
772 at the request of the Lender. A narrative justification of its elimination is required.
773 ORCF requires this approach when the actual or effective age of the facility is 5 years
774 or less and whenever the appraiser believes this approach is applicable and relevant to
775 producing a credible appraisal report.
776

777 ORCF will expect to see a fully developed cost approach in cases where there is little
778 depreciation or in cases where the undepreciated replacement cost new would be
779 expected to be lower than the conclusions of the Sales Comparison or Income
780 Capitalization Approaches. For that reason, base costs of new facilities will need to
781 be carefully discussed in the narrative justification for excluding the approach. If the
782 appraisal does not include a complete Cost Approach to Value and there are no
783 barriers to entry for a similar business enterprise to be constructed in the market area,
784 the appraisal must include the un-depreciated cost. The un-depreciated cost includes
785 the improvement and major moveable replacement cost, the estimated land value, and
786 the associated intangible costs. If there are barriers to entry that would prohibit the
787 development of a similar business enterprise in the market area, then the appraisal
788 must include a brief explanation of the barrier(s) to entry. When the un-depreciated
789 cost is below the appraised value, the appraisal must explain why an investor would
790 not build new rather than purchase the subject facility at the appraised value.
791

792 When developing a Cost Approach, the appraiser will prepare an independent
793 estimate using comparable data and industry publications (e.g., Marshall and Swift)
794 and conclude to the total cost for all improvements and major movable equipment. In
795 order to arrive at the MVTAB, absorption, staffing costs, other intangible start-up
796 operating costs, occupancy costs, and entrepreneurial profit should be considered and
797 identified. The entrepreneurial profit should be an amount sufficient to attract a
798 typical owner/investor to develop a project versus purchasing a stabilized project.
799 Disparity between the conclusions of the cost approach and the other approaches
800 should be discussed and reconciled as it relates to the principle of substitution.
801

802 All applicable forms of depreciation (also applies to major movable equipment) are to
803 be considered. The final cost approach estimate is to assume completion of all
804 required and proposed repairs included in the financing.
805

806 Advisory Note: There are sometimes costs associated with acquiring bed licenses
807 when the number of beds is controlled by the State, as with Certificates of Need
808 (CON). When the appraiser determines it is appropriate, the cost/value of acquiring
809 the license may be included in the Cost Approach. This is not the case for the "HUD
810 Replacement Cost" used in underwriting, see Production, Chapter 3.3.M
811

- 812 3. **Sales Comparison Approach to Valuation.** In obtaining sales data for the Sales
813 Comparison Approach, the appraiser should verify the data with a party involved in
814 the transaction (this source should be cited) and confirm that the transactions were
815 arm's-length between buyer and seller. The appraiser should visit all improved sale
816 comparables when in the subject's statistical market area. Photographs should be

817 provided of the comparables that were inspected. For those comparables which the
818 appraiser was not able to visit, inclusion of second party or published photos is
819 permitted, and preferred to omitting a photo entirely. The source of the second party
820 photographs should be cited.

821
822 The sales comparison should be formulated based upon those sales which are most
823 relevant and meaningful. The scope of the appraisal report should include a complete
824 description of the comparable search. If the sales that are utilized require substantial
825 adjustments the appraiser must provide an explanation why the sales utilized are
826 appropriate. Although the market for the property type appraised may be regional or
827 national in scope, if there have been recent sales in the area and those sales were not
828 utilized for comparative purposes, an explanation of why the more proximate sales
829 were not utilized is needed. All adjustments of the sales should be justified in the
830 narrative report. The value of any excess land should be deducted from the
831 comparable transaction sales price (if applicable). Contact information for sales
832 comparable data should be given.

833
834 When economic indicators such as income, expense, vacancy, cap rate, etc., are
835 quoted from a sales comparable, the source of the data, whether it be from the buyer,
836 seller, the appraiser's estimate, third-party estimate, etc., should be stated. Whether
837 the income was historical or prospective in nature should also be disclosed. Also,
838 state if the expense information is inclusive of management fees and reserve for
839 replacement deposits, to be consistent with the subject's income forecasts.

840
841 If the sales price includes consideration for accounts receivable, retained earnings, or
842 intangible assets that may be sold off by the buyer without affecting the going
843 concern, then the value of those assets should be deducted from the purchase price.

844
845 Sales of leased fee and partial interests should not be used as comparables in the Sales
846 Comparison Approach unless they can be reasonably adjusted for differences in the
847 interest being sold, nor should they be used in the derivation of market-extracted
848 capitalization rates.

849
850 Sales that are part of a small group transaction or portfolio are discouraged but may
851 be used if:
852 a. At least one of the facilities in the portfolio is within the same state as the
853 subject,
854 b. Adjustments are made for premiums or discounts associated with the "bulk"
855 sale, and
856 c. The price allocation of each facility is verified. Details of the aggregate sale,
857 with unit price indicators should also be given.

858
859 The larger the portfolio the less the sale can be relied on for comparison to a
860 single project. Reliance on a majority of portfolio comparables will not be
861 acceptable.

862

863
864 If the appraiser wishes to use an NOI adjustment in the sales comparison approach, the
865 guidance in this paragraph is to be followed. Using an NOI adjustment in the Sales
866 Comparison Approach is a way to adjust for all differences between properties with one
867 adjustment. In theory, all differences between two properties will be reflected in the
868 different NOIs the projects can generate. The use of an NOI adjustment exclusively will
869 largely replicate the results of the income approach in the sales comparison approach.
870 The danger is that the sales comparison approach cannot function as a check, as any
871 mistakes in the income approach will be passed through to the sales comparison
872 approach. In order to preserve the independence of the sales comparison approach, an
873 NOI adjustment can be utilized as additional support for the conclusion but not to the
874 exclusion of a fundamental analysis of the unit price.
875
876
877

878 The price per bed is a common unit of comparison utilized in the sales comparison of
879 skilled nursing facilities. In addition to the price per bed comparison, the appraiser
880 should consider, where appropriate, analyzing the sales on a per room basis. The price
881 per bed can be misleading at times because the rooms can be shared or private, depending
882 on the marketing strategy of the Borrower. This requirement is meant to prevent a bed
883 value derived from private rooms being applied to semi-private or ward beds, resulting in
884 an incorrect valuation.
885

886 ~~If there is a recent or pending sale of the subject, the sales price must be analyzed. If the~~
887 ~~property has sold within 3 years, or within the date range of the comparable sales, the~~
888 ~~price per unit/bed, capitalization rate, marketing time and market exposure must be~~
889 ~~provided.~~
890

891 If the appraised property has been involved in a transaction within three years of the
892 effective date of the appraisal, within the date range of the comparable sales, the
893 transaction(s) must be analyzed. Transactions include listings, sales, pending sales,
894 options, leases, offers to purchase, or similar transactions. The transaction analysis
895 should include the price per unit/bed, capitalization rate, marketing time, exposure time,
896 and be reconciled to the appraisal's estimated value. Depending on the details of the
897 transaction it may also be necessary to comment on how the property was marketed, the
898 volume of market interest, which assets were included/excluded from the transaction, and
899 if there were any special conditions or terms. Many appraisals report the subject's most
900 recent sale but fail to include all sales, agreements of sale, options, listings, within a
901 three-year period. If the required information is not available, the efforts made to obtain
902 the information must be presented. When the information is irrelevant, its lack of
903 relevance must be explained.
904

905 4. **Income Approach to Value.** The income capitalization approach to value is often
906 the most significant indicator of value for properties purchased for their cash flow.
907

908 The scope of the appraisal report should include a complete description of the

909 comparable search and data gathering process. The appraiser is to inspect and
910 provide a photo of all comparables utilized to forecast rents, census mix or occupancy
911 for the subject facility.

912
913 The appraisal report will provide a detailed description of the subject's
914 reimbursement structure or payment sources. In projecting all sources of income for
915 the subject property, consideration should be given to foreseeable changes in
916 competitive market conditions that will affect current occupancy, payer mix, and rate
917 levels. Examples include changes in: the condition of state finances, state laws
918 offering alternative forms of housing types, reimbursement structures, and
919 competitors in the marketplace.

920
921 For existing operations, an analysis of the subject's income, expense, and census mix
922 (by payer source) for the year-to-date and the last three fiscal years should be
923 provided and analyzed.

924
925 The analysis should provide a discussion of any foreseeable changes in
926 reimbursement.

927
928 **Advisory Note 1:** For example, if the capital cost component of a project's Medicaid
929 reimbursement will diminish over a 10-year period as the capital is depreciated, this
930 would need to be considered when setting the reimbursement rate and accounted for in
931 the capitalization processes of that income. This may also lead to the inclusion of a
932 sinking fund. See Production, Chapter 2.5 GG.

933
934 **Advisory Note 2:** Revenue and expenses should always be estimated based on market
935 expectations as a stand-alone facility of that particular asset type and class. For example,
936 if an operator owns several small facilities in a market sharing an administrator between
937 two or more facilities, this expense should be adjusted to market as a stand-alone facility,
938 which means one administrator to one building. However, this does not mean that if the
939 subject is a regional or national asset class that economies of scale such as purchasing
940 power or marketing cannot be considered.

941
942 ORCF does not have a minimum threshold of acceptability for the percentage for
943 occupancy. However, if the property in question has a lower occupancy rate than
944 comparables, it may be that the property is inferior in the marketplace. The lender
945 narrative will need to explain why this is occurring and what steps the Borrower is taking
946 to make the project more competitive. Also, ORCF does not put a limit on the maximum
947 occupancy rate that can be used in the appraisal report. Appraisal reports must be based
948 on market values. Appraisers may use whatever occupancy a typical market participant
949 would use. The appraiser's burden of ~~demonstrating the market's action grows~~ supporting
950 their forecast increases the more they depart from ~~market~~ the subject's norms. ~~At the~~
951 ~~same time,~~ Note to Lender: ORCF expects the lender to present a loan sizing that is
952 conservative. In cases where the appraiser has assumed unusually high occupancies,
953 ORCF expects the lender to implement a more conservative assumption. The loan sizing
954 would then be based on the lender's lower value.

999

a. **Private-Pay Rates.** Facilities with private pay as a payor source need to include an analysis of the current rent roll, and ~~how~~^{if} achieved rents differ from asking rents. This should be taken into consideration in the rate conclusions. For independent living, assisted living and memory care a comparison and adjustment grid should be provided for each private-pay unit type. For skilled nursing facilities, an adjustment grid is not required but the appraiser/analyst must provide an analysis with a rate comparison chart to determine if the private-pay nursing rates are at market levels. Use of fewer than 3 similar comparables requires an explanation. At a minimum, the rent comparison will discuss building ages, unit types, unit sizes, amenities, services, location, and rental concessions. The narrative should provide the rationale behind the adjustments and offer support in the form of market data and/or pairing analysis, when available.

Advisory Note: Many private-pay patients in nursing homes are patients with short-term assets and often will convert to Medicaid later. The forecasted private-pay rate must also consider the private-pay mix or census at the facility. As the private-pay rate increases, the average length of stay of the private pay patient may decrease due to limitations on their private assets.

b. **Medicaid Reimbursement – 223(f).** For 223(f) refinances, the appraisal report will include an outline of the State’s reimbursement system, discussing how reimbursement rates are set, or any local peculiarities. Medicaid reimbursement ~~rates~~ ~~rate conclusions~~ should be based on the project’s current rate, with take into account the following ~~exceptions~~:

- ~~i. If a firm rate change has been published and the change will occur within 6 months of the date of the appraisal report, the new rate can be used. The appraiser should acknowledge any foreseeable drop in rates.~~
- i. Published methodologies and rates, including historic, current, and published proposed rates need to be factored into the Medicaid rate forecast.
- ii. If the reimbursement rate includes a capital and/or financing component from which a new rate can be calculated based on the proposed/required repairs to be completed as part of this financing, the prospective rate can be calculated and used. A Certified Public Accountant should be used to determine the new reimbursement rates. This would also lead to the inclusion of a sinking fund. See Production, Chapter 2.5 GG.
- iii. Determination of the MVTAB assumes a market sale, and if the state resets rates upon sale, then a new rate must be estimated. The ways these rates are calculated vary from state to state. If the appraiser is not experienced in making these rate determinations, they should work with an accountant experienced with long-term care reimbursements within the state in which the subject is located to determine the new reimbursement rates. The “reset” Medicaid reimbursement rate(s)

1000 must tie back to the appraiser’s forecasted operating expenses when
1001 the reimbursement system is facility-specific and not cost based.
1002

1003 **Advisory Note:** The Medicaid rate may not always be the current rate.
1004 For example, some states issue quarterly rates and they may change
1005 significantly quarter by quarter depending on the case mix index. If
1006 the most recent quarter is used and that rate is the highest it has been in
1007 the last 4 quarters, the rate may be overestimated.
1008

- 1009 c. **Medicaid Reimbursement – New Construction, Substantial**
1010 **Rehabilitation and 241(a).** For New Construction, Substantial Rehabilitation
1011 and 241(a) loans, the estimated Medicaid rate must incorporate the rate-setting
1012 methodologies used by the respective state. For rates that are developed from
1013 cost-based, facility-specific systems, the Medicaid rate must be reconciled to
1014 the forecasted “Medicaid-allowable” operating expenses of the subject. It is
1015 not permissible to apply an un-reconciled rate to the appraiser’s forecasted
1016 expenses where cost-based, project specific systems are used. Facility
1017 specific, cost-based Medicaid rates developed or provided by third party
1018 experts (e.g. developer, operator, or management company) must be
1019 reconciled to the appraiser’s forecasted “Medicaid-allowable” operating
1020 expenses.
- 1021 d. **Medicare Reimbursement – 223(f).** For 223(f) refinances the analysis of the
1022 Medicare reimbursement rates should be based on ~~the project’s weighted~~
1023 ~~average rate based on~~ an analysis of the historic average Resource Utilization
1024 Group (RUG) census over per resident day reimbursements under the
1025 preceding 6 to 12 months of operations. If a firm rate increase has been
1026 current CMS rate methodology, and any published and the increase will occur
1027 within 6 months of the date of the appraisal report, the rate changes. Published
1028 methodologies and rates, including historic, current, and published proposed
1029 rates need to be factored into the Medicare rate can be used forecast. Use
1030 caution when the appraiser feels this outcome is expected and
1031 supported considering proposed rate changes that have not been finalized.
- 1032 e. **Medicare Reimbursement – New Construction, Substantial**
1033 **Rehabilitation and 241(a).** For New Construction, Substantial Rehabilitation
1034 and 241(a) loans, the analysis of the Medicare reimbursement rates should be
1035 based on weighted market reimbursement rates for the proposed care type, and
1036 supported by an analysis of average ~~RUG census per resident day~~
1037 reimbursements of comparables offering the same type of care ~~over the~~
1038 preceding 6 to 12 months. The appraiser should make a concerted effort to
1039 show that the expenses forecasted for the subject, match the level of care in
1040 the reimbursement rate. For projects with preexisting units, the rate should be
1041 reconciled with the facility’s historical weighted average rate.
1042

1043 **Advisory Note:** ~~RUG data is provided in Medicare cost reports.~~ Although
1044 local market comparable data needs to be provided, when the subject is

- 1045 ~~new~~newly constructed it may be appropriate to use other newly construction
1046 facilities in similar markets rather than using ~~older~~only local comparables.
- 1047 f. **Other Reimbursement (HMO, VA, etc.).** For other forms of
1048 reimbursement, the appraisal report will base the rate conclusion on an
1049 appropriate analysis of comparable market data, published rates, provider
1050 agreements, and/or the subject's historical data, as applicable.
- 1051 g. **Other Income:** Other income should be estimated based on market data.
1052 Significant components, such as personal care/ancillary services, second
1053 occupant charges, beauty shop, day care services, and other miscellaneous
1054 sources, should be supported by historical or comparable market data and
1055 presented individually in the report. Interest income is not to be included as it
1056 is not considered to be tied to the real estate.

1057
1058 Fundraising revenue cannot be included in the NOI. This would not be a
1059 dependable source of income and would not be available to a purchaser in the
1060 event of sale of the property.

1061
1062 Income and expenses from off-site activities, such as adult day care or home
1063 care, must be excluded from the valuation. See also Chapter 2.5.M

- 1064 h. **Commercial Income.** If the subject contains commercial space, the
1065 forecasted income from that space is to be estimated based on property history
1066 (when existing) and market data. Use of fewer than three comparable
1067 commercial leases requires an explanation. Small spaces, such as those leased
1068 for beauty/barber shops and therapist's rooms are not considered commercial
1069 space. In cases where a commercial lease would be severed in the event of a
1070 sale, such as with an Identity of Interest lease, the appraiser will use a
1071 hypothetical assumption that there is no lease in place and use market rates for
1072 the commercial space.
- 1073 i. **Vacancy and Collection Loss (Economic Vacancy).** HUD requires that the
1074 appraiser forecast a vacancy factor for the subject. Consider both a physical
1075 vacancy and a collection loss allowance. These components should be
1076 separately identified and supported in the report.

1077
1078 **Advisory Note:** Collection loss in healthcare properties is primarily listed as
1079 bad debt.

1080
1081 If the physical vacancy in the market exceeds the factor selected for the
1082 subject property, the appraiser must explain why the Property's performance is
1083 expected to be stronger than the market. The appraiser should also address the
1084 trends that would indicate a change from the current vacancy in the near
1085 future. The discussion of trends should generally include:

- 1086 i. Recent vacancy patterns, including any seasonal variations at the
1087 property and in the market.
- 1088 ii. Turnover rates.
- 1089 iii. Economic factors (e.g., employment, supply of comparable units) that
1090 may have a long-term impact.

1091 iv. Changes in the supply of competitive facilities and/or units.
1092 j. **Expenses.** The appraiser's expense estimate should conform to the following
1093 rules: All projects should stand alone and must not reflect shared expenses
1094 from nearby projects under the same management.

1095 i. Categorize and provide commentary as needed to support each item.
1096 A suggested chart of accounts (expense categories) is included in the
1097 Lender Narrative Template, but this is not a mandate on how the
1098 expenses should be categorized. The goal should be to record the
1099 expenses of the subject and the comparables in a way consistent with
1100 one another and in a way that requires the least amount of subjective
1101 re-categorization from the source reports.

1102 ii. For existing properties, the appraisal report will analyze the subject's
1103 historical operating statements. If any expense estimate used by the
1104 appraiser is lower than the historical expense, the appraiser should be
1105 particularly diligent in providing information concerning that expense
1106 estimate. The addenda of the appraisal report should contain legible
1107 copies of the subject's historical income and expense statements used
1108 in the valuation. The annual historical income and expense statements
1109 should be those supplied to the appraiser by the operator and should
1110 include totals for the operating period.

1111
1112 The financial history summarized in the appraisal must balance with
1113 the detailed income and expense statements certified by the owner to
1114 be correct. For the two to balance, expense add-backs are sometimes
1115 needed. Examples of add-backs are interest income, interest expense,
1116 depreciation, amortization, property rent, lawsuits, fund raising
1117 activities, and major capital improvements. This reconciliation should
1118 be explained in the lender narrative in sufficient detail for a reviewer
1119 to understand how the appraiser arrived at the historical NOI
1120 summary. The lender can speed the balancing process by describing
1121 the add-backs using the specific name or accounting code used in the
1122 certified financials. It is inappropriate to make adjustments to the
1123 history to normalize peculiarities of corporate structure. Such
1124 “normalizations” will be reflected in the appraisal’s forecast, but the
1125 history will reflect actual operations without adjustment. This financial
1126 history without normalization will be important for underwriters to
1127 gauge the adequacy of the debt coverage. Any income or expense
1128 considered by the appraisal or underwriter to be atypical should be
1129 adequately described and supported in the lender narrative.

1130
1131 Advisory Note: Appraisers and lenders should use caution if moving
1132 expenses into the management fee category. Since the management fee
1133 is typically normalized to market levels, there is a danger that
1134 necessary market expenses will be erased from the history by the
1135 normalization process. Itemize and explain any expenses that were
1136 recategorized into the management fee.

1156
1157
1158
1159
1160
- iii. At least three expense comparable properties will be considered. The expense comparables must not all be from the same operator/owner. The expense comparables should be included in the report and strive to:
- a. contain approximately the same payer mix (Medicaid, Medicare, Private Pay, etc.),
 - b. have similar unit/bed capacities,
 - c. be located in a market similar to the subject,
 - d. represent the same licensed level of care (skilled nursing, assisted living, memory care, etc.).

In cases where comparables with similar care mixes cannot be found, at least three expense comparables for each care type should be used.

Advisory note 1: The size as well as the census mix of a senior housing and/or nursing home must be considered in the selection of expense comparables. These two factors have the largest impact on variations in expenses from facility to facility. For example, it is not relevant or appropriate to forecast the expenses for an assisted living facility with an assisted living facility that is 50 percent smaller in size. It is not relevant or appropriate to compare a nursing facility with a substantial Medicare and managed care census mix to a nursing facility with substantially less Medicare and managed care patients.

Advisory Note 2: When estimating the expense of Professional Liability Insurance (PLI), do not simply select an average market expense for an average user. Market PLI expenses are property specific. The rate going forward for a given property for any owner is dependent on the actual history of claims, as well as the care/star rating. Therefore, the going-concern of a low rated property with a history of high claim rates would have a higher conclusion for market PLI expense than a highly rated property with a low rate of claims. For portfolios, ORCF implements this rule on a property by property basis, rather than applying the same PLI expense per bed across the entire portfolio.

Advisory Note 3: "ORCF considers flood insurance to be a market expense that other lenders would also require, therefore, the cost of flood insurance when applicable should be included in the appraisal's expense estimate.

- 1172
1173
1174
1175
1176
1177
1178
1179
1180
1181
1182
- iv. The appraiser must indicate from which period/fiscal year the expense comparables were taken. The appraiser will adjust or trend the comparables for changes in the market over time to the effective date of the appraisal report. The appraiser will describe how the adjustments were applied.

- 1183 v. For properties with commercial space, the expenses associated with
1184 that space must be discussed and supported at least three additional
1185 expense comparables will be analyzed and considered, unless the lease
1186 is on an absolute/triple net basis whereby the tenant pays all expenses.
1187 Commercial expenses should be reflected separately from the
1188 residential expenses. The conclusion should reflect any special
1189 conditions indicated in the commercial leases that would reduce the
1190 net income of the property.
- 1191 vi. Regarding confidential expense comparables, the appraiser may only
1192 use confidential expense comparables that are supportive and
1193 consistent with the fully disclosed comparable(s) used in the analysis.
1194 Using only confidential comparables is not allowed. Identify the locality
1195 of confidential expense comparables as much as possible without
1196 revealing the identity, e.g. MSA, State, or City. It must be noted when
1197 any of the expense comparables have a shared identity of interest,
1198 confidential or not. For any confidential expense comps, the appraiser
1199 must describe where the data came from with as much detail as can be
1200 given without violating USPAP confidentiality.
- 1201 k. **Reserve for Replacement Reserve.** The appraiser should reflect a reserve
1202 for replacement that is supported by the market and/or historical levels. HUD
1203 has a programmatic requirement to require a reserve for replacement;
1204 however, in order to preserve the integrity of the “Market Value” called for, if
1205 the amount required by HUD differs from what the market demands, the
1206 appraiser will use the market-based amount and the Lender will revise the
1207 amount in their underwriting to meet HUD’s requirements. The Lender is not
1208 required to recapitalize the value conclusion for this revision of expenses.
1209 The Lender will however use their altered net income conclusions in the
1210 calculation of the Debt Service Criterion used for loan sizing.
- 1211 l. **Real Estate Taxes.** The appraiser must consider current assessed value,
1212 trends, and levy rates of the local jurisdiction taxing the subject property. In
1213 cases that involve new construction, at least three comparable tax properties
1214 should be considered and analyzed. The current taxes (for the immediate tax
1215 year) should be clearly stated. The appraiser should discuss how the
1216 appraised value compares to the current assessment. If a jurisdiction resets
1217 the tax assessment after a sale, the appraiser’s expense conclusions should
1218 implement the hypothetical reassessment.
- 1219
1220 For properties subject to tax abatement or tax exemptions, the appraisal report
1221 will follow the procedures outlined in 7.5.
- 1222 m. **Capitalization Rate.** Under the direct capitalization method, the appraiser
1223 extracts the over-all capitalization rate from sales comparables. -The
1224 methodology for estimating the comparable’s NOI should match the
1225 methodology used in developing the subject’s NOI. That is to say, if since the
1226 subject’s income is prospective in nature, so the comparable’s comparables
1227 should also be; if. The use of capitalization rate comparables that use
1228 retrospective income require adjustment or support for their use. If the subject

1229 included a management fee, so should the comparable; if the subject's
1230 expenses included reserve deposits, so should the comparable's, etc. When
1231 extracting market capitalization rates from sale comparables, the appraiser
1232 should attempt to interview the buyer, seller, and brokers to learn their
1233 expectations of income and expenses. This is to ensure agreement between
1234 the subject's projected income/expenses and the sale comparable
1235 capitalization rates.

1236
1237 The appraisal report must explain the adjustments to a comparable's NOI
1238 when deriving a capitalization rate. The appraiser should comment on the
1239 relative quality, reliability, or appropriateness of comparable's capitalization
1240 rate. The narrative is to provide pertinent discussion as to how the subject's
1241 final capitalization rate was determined.

1242 n. **Discounted Cash Flow (DCF).** The appraisal report may use a discounted
1243 cash flow analysis or Yield Capitalization as an additional check against the
1244 direct capitalization approach above. This method can be a useful and valid
1245 analysis in situations where incomes will vary over time in a predictable way.
1246 However, due to the subjective nature of the DCF and the potential for misuse
1247 of cash flow estimates, discount rates, terminal rates, etc., ORCF will only
1248 permit this methodology to be utilized as an indicator of value in addition to
1249 other valuation methodologies. With rare exceptions, the Income Approach
1250 conclusion should not be weighted to the results of a Discounted Cash Flow
1251 Analysis.

1252 o. **Special Appraisal Report Considerations.** The appraiser should be aware
1253 of the following program restrictions:

1254 i. **Continuum of Care Retirement Communities (CCRC's).** HUD
1255 does not insure facilities that require upfront fees or substantial down
1256 payments for occupancy. For facilities that offer services to more than
1257 one type of resident (e.g., assisted living, dementia, skilled nursing)
1258 the appraisal report will need to adequately evaluate each group in
1259 terms of income, expense, and sales comparable data. If comparable
1260 data from projects of a similar resident mix is not available, the
1261 appraisal report will need to include a separate analysis for each
1262 resident type. Likewise, for the income and expense comparables.

1263 ii. **Day Care.** An eligible health care facility may provide nonresidential
1264 (outpatient) care for elderly individuals and others (e.g., persons with
1265 physical or mental disabilities) who require care during the day. To be
1266 eligible for the program, non-resident day care space may not exceed
1267 20% of the gross floor area of the facility and non-resident day care
1268 income may not exceed 20% of gross income.

1269 iii. **Clinics, Medical Offices, and Similar Related Services.** Clinics,
1270 medical offices, and similar related services included in a residential
1271 care facility are to be treated as commercial space in accordance with
1272 the current ORCF instructions and limitations.

1273 iv. **Rent Restrictions/Rent Subsidies.** In some cases, ~~assisted living~~
1274 facilities may receive subsidies and be tied to restrictions. If the

1275 property's rental rates are restricted or subsidized, the appraisal report
1276 will discuss the particulars of the restriction/subsidy, including how
1277 the rates are determined, the duration of the restriction/subsidy,
1278 identify the entity responsible for monitoring the restriction/subsidy,
1279 and identify the effect on marketability ~~of the non-restricted/non-~~
1280 ~~subsidized units.~~ For unit- or project-based restrictions/subsidies, the
1281 appraisal report should use the lower of the market rent conclusion and
1282 the restricted/subsidized rent in determining value, unless otherwise
1283 instructed. This may require the appraiser to cite a hypothetical
1284 condition.

1285
1286 Payments from Medicare, Medicaid, HMO's and Private Insurance are
1287 not considered subsidized rents. Subsidized properties cannot be used
1288 as comparables for non-subsidized properties with respect to sales,
1289 expense, or rent comparability.

1290 v. **Contradiction.** In the event that this appraisal report guideline
1291 contradicts the provisions of the HUD/FHA Regulations or does not
1292 comply with USPAP (and a jurisdictional exception cannot be made),
1293 the appraiser will immediately bring the issue to the attention of the
1294 Lender's underwriter.

1295
1296

5.4

Ground Leases

1297
1298 ~~A. **Lease Duration:** To be eligible, the lease term may be at any stage of a 99-year lease, so~~
1299 ~~long as the lease is renewable, or have at least 10 years remaining after the maturity date of~~
1300 ~~the proposed mortgage.~~

1301 A. **Eligibility and Lease Duration:** For guidance on the eligibility of ground leases, see
1302 Production Chapter 2.

1303
1304 B. **Mortgage Amount Limitation:** HUD regulations state, "In the event the mortgage is
1305 secured by a leasehold estate rather than a fee simple estate, the value of the property
1306 described in the mortgage shall be the value of the leasehold estate (as determined by the
1307 Commissioner) which shall in all cases be less than the value of the property in fee simple"
1308 (24 CFR 232.903(a)). Compliance with this regulation will be met through the following
1309 steps:

1310
1311 1. The appraiser is asked to develop the Hypothetical Fee Simple Value of the ~~Going~~
1312 ~~Concern~~ MVTAB or Market Value of the Total Assets of the Business as if
1313 unencumbered by the ground lease. The lender will enter this amount on Form HUD-
1314 92264a-ORCF, (Tab MILC Page 1 – Line D.a).

1315
1316 2. Next the lender will enter the option to purchase price from the Lease Addendum
1317 (Form HUD-92070-ORCF), on the line that calls for the "Value of the Leased Fee" -
1318 Line C.b.(1) and Line D.b). Only government entities can request waivers to not
1319 name a purchase price. In the rare cases where the Lease Addendum does not specify

1320 a purchase price, the hypothetical fee simple value of the land will be entered on line
1321 C.b.(1). Cases where there is a single up-front ground lease payment or where the
1322 lease payment is a token \$1, will be treated more like fee simple land ownership in
1323 that \$0 will be entered on line C.b.1. ~~Only government entities can request waivers to~~
1324 ~~not name a purchase price.~~
1325

1326 The form will automatically deduct the option to purchase price from the fee simple
1327 value before applying the prescribed loan to value percentage limitation. This
1328 procedure assumes parity between the Leased Fee Value and the option to purchase
1329 price. Even when there is not parity, HUD's interest is covered as the loan size
1330 decreases based on how costly it will be to purchase the land.
1331

1332 For the Debt Service criterion on Form HUD-92264a-ORCF, the lender will include
1333 the annual ground rent under the "Land Calc" tab on the line item that says "Annual
1334 Ground Rent".
1335

1336 The land value should not be included on Form HUD-92264a-ORCF. Likewise,
1337 when leased land contains pre-existing buildings that are to receive substantial
1338 rehabilitation, the contributory value of the pre-existing improvements is not to be
1339 included. The value of these items is assumed to be paid for annually by the lease
1340 payments; therefore, their value should not be included in the overall costs.
1341

1342 In cases where there is a single up-front ground lease payment that covers the ground
1343 rent through loan maturity, the amount of the payment may be entered in the "Land
1344 Calc" tab of Form HUD-92264a-ORCF, under additional cost. Include a note
1345 explaining what the additional cost is for. Otherwise, the processing is the same as
1346 with other ground leases.
1347

1348 **C. ORCF Appraisal Report Review:** The ORCF review appraiser will perform a review of the
1349 ground lease that examines the following:
1350

- 1351 1. The review appraiser will analyze the lease parameters and the ground rent payment
1352 amounts. Although certain kinds of annual increases may be allowed, variable lease
1353 payments are not acceptable because they raise the risk that future payments may be
1354 too burdensome and may cause a potential default in the mortgage payments.
1355 Examples of unacceptable methods of determining variable ground rents are:
- 1356 a. A graduated schedule of future increases on a lump sum year-by-year basis.
 - 1357 b. Cost of Living increases (waivers of this restriction will be considered if there
1358 is a cap in place to the amount of increase).
 - 1359 c. Increases based on the results of future appraisal reports.
 - 1360 d. A fixed percentage of effective gross income.
- 1361
- 1362 2. Annual increases are acceptable when computed using any of the following ~~three~~two
1363 methods:

1364
1365
1366
1367
1368
1369
1370
1371
1372
1373
1374
1375
1376
1377
1378
1379
1380
1381
1382
1383
1384
1385
1386
1387
1388
1389
1390
1391
1392
1393
1394
1395
1396
1397
1398
1399
1400
1401
1402

- ~~a. A fixed percentage of effective gross income. The percentage must remain the same throughout the term of the lease. Effective gross income shall mean the annual amount collected from all sources, less refunds.~~
- a. A fixed percentage of net cash flow. The percentage must remain the same throughout the term of the lease. Net cash flow shall be the annual amount remaining after debt service payments are subtracted from net income.
- b. A stated dollar amount per year which must remain fixed for at least 10 years more than the term of the insured mortgage.

D. **Acceptability of Lease Payments:** The lease payments may not exceed market levels. The appraisal report is to determine the amount of the “market” ground rent by first determining the fee simple value of the land, then presenting comparable data on ground lease returns. The market ground rent is then to be compared to the proposed ground rent. When local comparables are not available, data from comparable markets will be acceptable. The review appraiser will ensure that the ground rent amounts do not exceed market levels.

E. **Lease Provisions:** The review appraiser must review other provisions of the lease to determine that they will not restrict the successful operation of the project, keeping in mind that the provisions of the Lease Addendum, must be included in, or legally appended to, the lease. If the above conditions are met and the annual lease payments required under the lease meet the test for acceptability, the appraiser may recommend that the lease be accepted.

F. **Ground Rent during Construction:** For proposed construction under all sections of the Act, normal monthly lease payments during construction may be included in the estimated replacement cost of the project and in the certified cost, subject to the following conditions:

1. The period for which ground rent is estimated must be the same as that for which interest and other related charges are calculated, or, the estimated construction time plus two months.
2. Ground rent during construction may be entered in the replacement cost tab of Form HUD-92264a-ORCF (labeled “Warranted Price of Land”). A remark should be entered indicating that the amount includes ground rent during construction.
- ~~3. Ground rent must not be included in the base on which profit (AMPO—allowable for making non-profit projects operational) is calculated.~~

5.5 Tax Abatement Procedures

1403
1404
1405
1406
1407
1408

Tax abatement/exemption herein shall mean a reduction of property taxes by the taxing authority, whether in the form of forgiveness or refund. The appraiser will investigate how long the abatement will last and whether or not the abatement will be passed on to a new owner when there is a sale. For purposes of Section 232 underwriting abatements will be classified as one of the following three types:

- 1409
1410 — 1. **Type A:** Abatements that will not be inherited by a typical buyer, and abatements
1411 where there are less than 5 years of abatement remaining.
1412
1413 — 2. **Type B:** Abatements that would be inherited by a typical buyer, where the
1414 abatement amount is level, or the exemption is complete, and lasts the term of the
1415 mortgage.
1416
1417 — 3. **Type C:** Abatements that would be inherited by a typical buyer, but are variable
1418 in amount and/or shorter than the term of the mortgage.
1419
1420 A. **Type A Abatements:** Properties that have real estate tax abatements that would not be
1421 passed onto a typical buyer or where there are less than 5 years of abatement remaining are to
1422 be appraised and underwritten assuming full market-level tax as an expense. It will not be
1423 necessary for the appraiser to invoke a hypothetical condition for this assumption, as they
1424 will already be assuming a sale. Deciding whether or not abatements can be inherited will
1425 require an analysis of the rules that govern the abatement. These rules could show that some
1426 buyers, such as non-profit organizations, could inherit the abatement, whereas for-profit
1427 organizations could not.
1428
1429 When determining who a typical buyer of the property would be, it is inappropriate to
1430 assume a non-profit organization would be the next buyer simply because the current
1431 Borrower is a non-profit. This is not to say that there are not cases where another non-profit
1432 would be the most likely buyer.
1433
1434 While the appraised value will recognize full market taxes, the lender can recognize the tax
1435 abatement in sizing the mortgage by debt coverage, so long as the abatement lasts more than
1436 5 years.
1437
1438 B. **Type B Abatements:** For properties that have tax abatements that would be passed onto a
1439 typical buyer, AND where the abatement amount is constant or there is forgiveness of the
1440 complete amount, AND lasts the term of the mortgage, the appraiser and lender may
1441 recognize the savings in their expense conclusions both in market value and in debt coverage
1442 calculations.
1443
1444 C. **Type C Abatements:** For properties that have tax abatements that would be passed onto a
1445 typical buyer where the tax abatement is variable in amount, and/or shorter than the term of
1446 the mortgage (but longer than 5 years), the value of the abatement may be considered as
1447 follows: The appraiser will first determine the values produced by all applicable approaches,
1448 assuming full market taxes in their expense calculations. Next, the appraiser will estimate
1449 the Net Present Value (NPV) of the tax savings. The discount rate used in this calculation is
1450 to be determined by the appraiser. Below is an example of a 6-year variable tax abatement
1451 and the concluded NPV. In this example seven years have been shown for illustrative
1452 purposes but there is no tax savings in year seven.
1453

Year	2012	2013	2014	2015	2016	2017	2018
Forecasted Market Taxes	\$115,387	\$117,118	\$118,875	\$120,658	\$122,468	\$124,305	\$129,983
Actual Taxes with Abatement	\$0	\$5,856	\$11,888	\$18,099	\$24,494	\$31,076	\$129,983
Tax Savings	\$115,387	\$111,262	\$106,988	\$102,559	\$97,974	\$93,229	\$0
Discount Rate	13.0%						
NPV of Abatement	\$424,252						
Year	2012	2013	2014	2015	2016	2017	2018
Forecasted Market Taxes	\$115,387	\$117,118	\$118,875	\$120,658	\$122,468	\$124,305	\$129,983
Actual Taxes with Abatement	\$0	\$5,856	\$11,888	\$18,099	\$24,494	\$31,076	\$129,983
Tax Savings	\$115,387	\$111,262	\$106,988	\$102,559	\$97,974	\$93,229	\$0
Discount Rate	13.0%						
NPV of Abatement	\$424,252						

The NPV can then be added to value conclusions from each approach before concluding a final rounded value.

Type C tax abatements can be recognized in Debt Service criterion on the Form HUD-92264a-ORCF (maximum mortgage amount based on debt service ratio).

5.6

Restricted Rents

For loan applications that involve rent restriction from Low Income Housing Tax Credits (LIHTC) or Tax Exempt Bonds, the income and expenses are to be evaluated under two scenarios, namely with and without the rent restrictions. The two scenarios will be used as follows for loan sizing on the Form HUD-92264a-ORCF:

- ~~1. **Loan-to-Value Criterion:** In the Loan-to-Value criterion of the Form HUD-92264a-ORCF, the lender is allowed to use either the market value as encumbered by the rent restriction or the hypothetical market value as if unencumbered by the rent restrictions. The Regardless of which value is used to size the loan, the appraisal report statement of work (Section 5.3) always calls for a Market Value that incorporates all the applicable will supply both the market value as encumbered by the rent restriction and the hypothetical market value as if unencumbered by the rent restrictions, therefore, whenever the Lender wishes to use an unencumbered value, they will need to expand the appraiser's assignment to provide the second value (unencumbered) value. The appraiser will then make a hypothetical assumption that the rent restrictions do not apply. Market rent levels will be established using the normal procedures outlined in the statement. All components of work. Expenses will also need to be reanalyzed based on the hypothetical census shift. The market the analysis requirements always call for an analysis that recognizes all rent restrictions that will be in place. In order for the appraiser to produce a hypothetical unencumbered value, they will need to revisit the demand calculations to determine how well the proposed units will be received when must be analyzed separately for~~

1486 ~~each scenario including but not limited to restricted differences in rent, expenses,~~
1487 ~~marketability, income residents. The comparable selection and the adjustments made~~
1488 ~~in the qualifications, sales comparison approach will also need to be revisited.~~

1489 1. ~~If the lender is requesting a loan amount that is less than the Loan to Value criterion~~
1490 ~~limit, the lender may simply use the Market Value that recognizes the rent restrictions~~
1491 ~~and not provide the second hypothetical value as if unencumbered. This will make~~
1492 ~~the appraisal report assignment less complex and generally less costly and rent~~
1493 ~~comparables, census mix, capitalization rate, etc.~~

1494
1495 2. Debt Service Criterion – Debt Service Analysis: In calculating the NOI the lender
1496 uses for the Debt Service criterion, rent restrictions must be observed.

1497
1498 A. **Expenses/Fees**: Properties with LIHTC restricted units will commonly have a higher
1499 operating expense ratio per unit than market rate properties, which may be due to increased
1500 administrative costs for tax credit compliance monitoring, and due to performing tenant
1501 income certifications and staffing to provide on-site resident services.

1502
1503 B. **Audit Fee No Longer Recognized**: With the elimination of the requirement for an audited
1504 cost certification for mortgage insurance transactions with LIHTC, assuming the ratio of loan
1505 proceeds to the actual cost of the project is less than 80 percent, the audit fee will no longer
1506 be recognized as an allowable cost in the Total Estimated Replacement Cost of Project,
1507 replacement cost tab of the Form HUD-92264a-ORCF.
1508
1509

5.7

Non-Profit Operations

1510 ORCF is seeking the as-is market value based on the hypothetical condition that all repairs are
1511 complete as of the effective date of value. The as-is market value is what a facility would sell for
1512 as of the effective date of the appraisal hypothetical. It is not always the mission of non-profit
1513 organizations to maximize cash flows. Potential for-profit buyers would likely modify the
1514 operations with the goal of improving cash flows in mind. Potential differences between non-
1515 profit and for-profit operators include but are not limited to staffing ratios, employee benefits
1516 packages, higher level food service, even potentially higher occupancy rates, reputational
1517 differences, etc. It is appropriate for an appraiser to adjust these and other revenues and
1518 expenses to reflect a true market operation (both on the revenue and expense side) in determining
1519 the value. If the appraiser believes that the operations would materially change with a market
1520 sale, the appraiser must factor into their analysis the additional costs and risks associated with
1521 converting a facility from the current non-profit operation to a for-profit operation (see
1522 Production, Chapter 5.3.G Hypothetical Conditions). The method for factoring in the additional
1523 costs and risks is up to the appraiser but could conceivably take the form of an increased cap rate
1524 or a reduction to value based on a discounted cash flow analysis to support the value or other
1525 methods as the appraiser deems appropriate.
1526
1527

1528 When considering modifications to the current operations, the following additional standards
1529 must be met. The appraiser must separately discuss the market income and support any changes
1530 from the original operating statements.

- 1531
- 1532
- 1533
- 1534
- 1535
- 1536
- 1537
- 1538
- 1539
- 1540
- 1541
- 1542
- 1543
- 1544
- The income capitalization analysis of the appraisal report must first analyze the project’s actual non-profit operations, with no market-based adjustments being made. No valuation analysis is considered in regard to this income.
 - A market based reconstructed income statement to be used for capitalization purposes will also be required. The market income must separately discuss and support any changes from the original operating statements.
 - Many non-profit organizations have established and consistent fundraising income. This Fundraising income may be considered as an underwriting strength; however ~~that, this~~ income is not to be considered for valuation or debt coverage purposes.
 - The market’s reaction to a hypothetical shift from non-profit to for-profit and the timing of the shift should be analyzed and discussed.
 - A hypothetical condition needs to be included if the valuation assumes a transition to for-profit operations.

1545

1546

1547

1548

1549

1550

1551

Lenders need to pay particular attention to the debt coverage limits to loan sizing when working with non-profits. While the net income operating income used in valuation includes market income and expenses, the NOI for the debt cover assumes the performance of the subject’s own specific operator. The lender should not introduce adjustments to NOI used in the debt coverage test for any items besides reserves for replacement. The subject’s historical NOI, not the appraiser’s conclusion, will be relied on by HUD to determine the reasonability of the NOI proposed by the lender in the debt coverage test.
