The following business scenario shows the use of transaction set 820 to transmit payment order/remittance advice information on a single claim for mortgage insurance benefits. HUD is advising Sunnyside Mortgage Corp. of Birmingham, AL about the items that will be paid on its claim in connection with FHA Case No. 011-1000000. The FHA Cash Payment amount for the claim is \$16,256.75; the payment type is Final. Relevant dates and reference numbers are transmitted, together with codes indicating the reasons for adjustments to amounts claimed. The individual line items claimed are also transmitted and identified as deduction, expense, or interest amounts; interest rates are also provided.

Transaction Set Notes

- 1. The ENT loop is for vendor or consumer third party consolidated payments.
- **2.** The TXP loop is for tax payments.
- **3.** The DED loop is for child support payments.
- **4.** The LX loop is for pension payments.
- **5.** The N9 loop is for payroll payments.
- **6.** The RYL loop is for royalty payments.

Transaction Set Comments

- 1. The TRN segment is used to uniquely identify a payment order/remittance advice.
- 2. The CUR segment does not initiate a foreign exchange transaction.
- 3. The N1 loop allows for name/address information for the payer and payee, which would be utilized to address remittance(s) for delivery.
- **4.** ENT09 may contain the payee's accounts receivable customer number.
- 5. Allowing the NM1 segment to repeat in this area allows the paying entity within a payer and the paid entity within a payee to be identified (not the payer and payee).
- 6. This ADX loop contains adjustment items, which are not netted to an RMR segment in this transaction set.
- 7. Loop IT1 within the ADX loop is the adjustment line item detail loop.
- **8.** Loop RMR is for open items being referenced or for payment on account.
- **9.** Loop IT1 within the RMR loop is the remittance line item detail loop.
- 10. This ADX loop can only contain adjustment information for the immediately preceding RMR segment and affects the amount (RMR04) calculation. If this adjustment amount is not netted to the immediately preceding RMR, use the outer ADX loop (position 080).
- 11. Loop IT1 within the ADX loop is the adjustment line item detail loop.
- **12.** The AMT segment can be used to provide information about allocation or distribution of gross pay that is split across multiple payment orders.

Segment: ENT Entity

Position: 010

Loop: ENT Optional

Level: Detail:
Usage: Optional
Max Use: 1

Purpose: To designate the entities which are parties to a transaction and specify a reference

meaningful to those entities

Syntax Notes: 1 If any of ENT02 ENT03 or ENT04 is present, then all are required.

- 2 If any of ENT05 ENT06 or ENT07 is present, then all are required.
- 3 If either ENT08 or ENT09 is present, then the other is required.

Semantic Notes: Comments:

- 1 This segment allows for the grouping of data by entity/entities at or within a master/masters. A master (e.g., an organization) can be comprised of numerous subgroups (e.g., entities). This master may send grouped data to another master (e.g., an organization), which is comprised of one or more entities. Groupings are as follows:
 - (1) Single/Single: Only ENT01 is necessary, because there is a single entity (the sending master) communicating with a single entity (the receiving master).
 - (2) Single/Multiple: ENT05, ENT06, and ENT07 would be used to identify the entities within the receiving master. The sending master is a single entity, so no other data elements need be used.
 - (3) Multiple/Single: ENT02, ENT03, and ENT04 would be used to identify the entities within the sending master. The receiving master is a single entity, so no other data elements need be used.
 - (4) Multiple/Multiple: ENT02, ENT03, and ENT04 would be used to identify the entities within the sending master. ENT05, ENT06, and ENT07 would be used to identify the entities within the receiving master.

This segment also allows for the transmission of a unique reference number that is meaningful between the entities.

Notes: This ENT segment identifies the payee.
