Transaction Set 264 - Mortgage Loan Default Status

Transaction set (TS) 264 is used for the submission and processing of mortgage loan default data. HUD's Single Family Default Monitoring System (SFDMS) is currently used to monitor mortgagees who have been approved by HUD to finance or service FHA-insured family properties. Mortgagees are required to submit the information found on form HUD-92068A when an FHA mortgage is 30 days delinquent. They are required to resubmit the information at least monthly until the mortgage is reported as current, paid off or otherwise terminated. Mortgagee Letter 96-14, Attachment #1 dated April 1996 provided a schedule for mortgagees to complete EDI implementation of Forms HUD-92068A (Monthly Delinquent Loan Report), HUD 92080 (Mortgage Record Change), and HUD-27050-A (Mortgage Insurance Termination). All trading partners were mandated to be EDI-capable by December 1997 for defaults and mortgage record changes. The mandate for claims was August 31, 1997. HUD's latest requirements for Default reporting can be found in ML 2013-15, dated May 9, 2013.

This section of the Implementation Guide describes the relevant processes involved in using EDI for the collection and dissemination of single-family mortgage loan default reports. Paperless default reporting has the following advantages:

- The number of times the same information is manually processed is reduced;

- With the implementation of the form generation specifications provided to mortgagees for HUD-92068A preparation, a majority of the current data errors are eliminated;

- EDI improves the communication between HUD and mortgagees and decreases the staff time required for mortgage loan default reporting;

- EDI allows HUD to provide feedback to mortgagees on default error cases electronically; and

- EDI allows mortgagees to submit corrections electronically within the same reporting cycle.

Utilizing EDI, mortgagees and servicers electronically transmit loan default data from their computers to HUD. The information is in a standard X12 format (TS 264). Upon receipt and acceptance of the electronic input, the loan default information is verified for completeness, and then passed to HUD's SFDMS for processing. The sender receives an acknowledgment of HUD receipt in the form of an X12 TS 997, Functional Acknowledgment.

Electronic loan default data is either moved forward in processing, or a TS 824 is

communicated back to the sender requesting corrections. An 824, Application Advice, used as a request for correction, will require the sender to resubmit a corrected TS 264.

Detailed step-by-step instructions are provided in the following pages for implementation of the TS 264, including mapping of the transaction set to the components of the information found on form HUD-92068A.

Transmission Notes for Transaction Set 264

To successfully transmit TS 264, the following items should be reviewed:

➤ Ensure that the interchange control segments information for you and your trading partners is specified as discussed in Appendix C; and

➤ Ensure that all data is in the format required by HUD's application system.

Each bullet point is discussed in the paragraphs below.

Interchange Control Segments. As stated in Section III, the interchange control segments contain control information about you and your trading partner(s) and indicate the number of functional groups included in the transmission. An interchange control header (ISA) identifies the beginning of an interchange of one or more functional groups and interchange-related control segments, whereas an interchange control trailer (IEA) defines the end of an interchange of one or more functional groups and interchange-related control segments. Ensure that all specifications, as outlined in Appendix C, are met.

Data format. HUD's application system requires specific formats for data elements within TS 264. These format requirements include usage of parentheses and hyphens and the acceptable length for HUD's application system when it is less than the length allowed in the X12 standards. Format requirements for individual data elements are specified in the shaded note sections of the Data Mapping Guide for TS 264, presented later in this section.

Business Scenarios

A business scenario illustrates the construct of a transaction set transmission. For the 264, it provides a simple mortgage loan default status report in EDI format. To assist in the use of the TS 264, two business scenarios are provided. Following the business scenario description, a table is provided for each line of the associated EDI transmission with an explanation of the content of the transmission. <u>These scenarios assume that HUD's reporting requirements, per ML 2021-31, have already been in effect, and pre-date all default episodes listed</u>.

Transaction Set 264 Outline

Transaction set (TS) 264 will used by mortgage lenders to file single-family mortgage loan default information with government agencies and private mortgage insurers. The information in a standard format will allow all notifications of mortgage loan default/foreclosure status to be filed similarly, whether they are to an insurer or guarantor. The following pages contain the 264 transaction set outline.

264 Mortgage Loan Default Status

Functional Group ID=MG

Introduction:

This standard contains the format and establishes the data contents of the Mortgage Loan Default Status Transaction Set (264) for use within an Electronic Data Interchange (EDI) environment. This transaction set will allow all notifications of mortgage loan default/foreclosure status to be filed similarly, whether they are to an insurer, guarantor, investor, or servicer. This transaction set can be used to submit notification of delinquent mortgage loans that could potentially result in foreclosure activity leading to the collection of a third-party guarantee/insurance benefit. This transaction set can also be used to file default status reports, as well as foreclosure and bankruptcy information with servicers, attorneys, trustees, government agencies, private mortgage insurers and investors.

Mortgagees will send code "00" to identify the first transmission of any Default report in each reporting cycle. Mortgagees will send code "41" to identify "resubmit" reports or corrections after receiving a TS 824 Application Advice from HUD.
Important Note: Sending a code "41" does not cancel, replace or delete a previous Default Report from the HUD Default system. The "41" is used after the business partner has received the TS 824 and subsequent TS 264s (a second or a third) are required for corrections.

	2 If either N103 or N104 is present, then the other is required.
Semantic Notes:	
Comments:	**1** This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
	2 N105 and N106 further define the type of entity in N101.
Notes:	The N1 segment is used in each iteration of Loop 0211 to provide the name and Social Security Number of the mortgagor. Loop 0211 will be repeated to accommodate information for the principal mortgagor and the co-mortgagor (if any).

Segment:	**LS** **Loop Header**
Position:	170
Loop:	0210 Mandatory
Level:	Detail
Usage:	Optional
Max Use:	1
Purpose:	To indicate that the next segment begins a loop
Syntax Notes:	
Semantic Notes:	1 One loop may be nested contained within another loop, provided the inner nested loop terminates before the outer loop. When specified by the standard setting body as mandatory, this segment in combination with "LE", must be used. It is not to be used if not specifically set forth for use. The loop identifier in the loop header and trailer must be identical. The value for the identifier is the loop ID of the required loop segment. The loop ID number is given on the transaction set diagram in the appropriate ASC X12 version/release.
Comments:	1 See Figures Appendix for an explanation of the use of the LS and LE segments.
Notes:	The LS segment, when used, requires the segment immediately following it and the LE segment in position 290 to be sent.

Data Element Summary

	Ref. Des.	Data Element	Name	Attributes
Must Use	**LS01**	**447**	**Loop Identifier Code**	**M AN 1/6**

The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE

NOTE: LS01, the Loop Identifier Code, shall always have a value of 0212 to indicate the next segment begins Loop 0212. The corresponding LE01 in the LE segment, shall have an identical value of 0212 to indicate the segment immediately preceding it completes Loop 0212.

5 If REC10 is present, then REC09 is required.
6 If REC12 is present, then REC13 is required.
Semantic Notes: **1** REC01 specifies the occupancy status of the real estate property.
2 REC03 indicates specified damage types such as fire, flood, earthquake, etc.
3 REC04 indicates whether there was other (nonsurchargeable) damage, i.e., damage that may not be added to the lender's claim for mortgage insurance benefits. A "Y" indicates there was other damage; an "N" indicates there was not.
4 REC05 indicates the number of living units.

Adjunct Loan Default Transaction Sets

The following transaction sets are used in electronic loan default reports processing in conjunction with TS 264.

Transaction Set 824 — Application Advice. This transaction set can be used to provide the ability to report the results on an application system's data content edits of transaction sets. The results of editing transaction sets can be reported at the functional group and transaction set level, in either coded or free-form format. It is designed to accommodate the business needs of reporting acceptance, rejection, or acceptance with change of any transaction set. The application advice should not be used in place of a transaction set designed as a specific response to another transaction set.

For HUD, TS 824 returns errors found during the edit of the TS 264 submission of a loan default report and indicates that the loan default report must be resubmitted to enable HUD's application to successfully process the loan default report.

Transaction Set 997 — Functional Acknowledgment. This transaction set can be used to define the control structures for a set of acknowledgments to indicate the results of the syntactical analysis of the electronically encoded documents. The encoded documents are the transaction sets, which are grouping in functional groups, used in defining transactions for business data interchange. This standard does not cover the semantic meaning of the information encoded in the transaction sets.

Each time a 264 or functional group arrives at HUD, the mortgagee/servicer will be informed of receipt through the use of TS 997 — Functional Acknowledgment. The mortgagee/servicer will also inform HUD of receipt of the 824 via a 997.

A complete mapping document of the TS 824 is provided on separate instruction. The other adjunct transaction set relevant to TS 264 - namely TS 997 - may also be used in conjunction with other transaction sets and can be found in Appendix D.
