Inspection Process:

Observation: - Look for GFCI outlets or breakers and AFCI breakers.
Request for Help: - Notify POA that these circuits are to be interrupted and can affect devices such as: computers, oxygen devices, and televisions, etc.
Action: - Test the functionality by engaging the test and reset buttons.
- If the electrical run is protected, then use electrical testing device to trigger response at the outlet level.
More Information: - Some outlets are wired in series and may have one GFCI/AFCI that provides protection to the entire series.
