- Entry doors designed without a seal, gasket, or stripping are not considered a deficiency.
  - To determine this, use a mirror to look at the top, sides, and bottom of the door and the top and sides of the jamb for evidence that a seal, gasket, or stripping was ever present (e.g., adhesive residue, open staple, nail or screw holes, empty kerf, etc.).
  - For example, there is a gap less than ¼ inch permitting light under an entry door, but no evidence of water penetration (e.g., water damage or dry rot). Using touch or a mirror, it is determined that the door was designed without a seal or a threshold. In this case, there is not a deficiency. However, if there is evidence of water penetration, then it would be considered a deficiency.
