

# Your Children's Jewelry May Be Poisoning Them.

Protect Your Children By Learning About Lead Poisoning

How Can Lead Hurt My Children?

Lead Hurts Children Under Age Six When They Play Normally. They Can Swallow Lead Dust from Old Paint When They Put Their Fingers or Toys in Their Mouths. Or They Can Swallow or Chew Objects That Contain Lead, Like Children's Jewelry.

Is There Really Lead in Children's Jewelry?

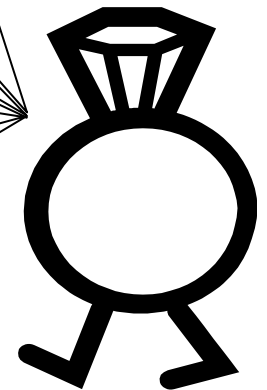

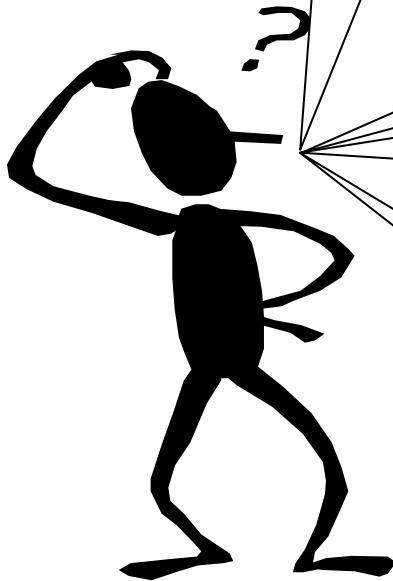

Yes, there is Lead in Some Children's Jewelry and Toys. Products from many stores (like Target, Wal-Mart, and Dollar Stores) have been found to contain lead.

What Does Lead Poisoning Do to Children?

Lead poisoning causes learning problems, hyperactivity, lowered IQ. Lead poisoned children are 7 times more likely to drop out of school than other children.

How Can I Protect My Children from Lead?

•Have your child tested for lead every year •Wash children's hands after play and before eating •Wet mop floors and wipe window sills weekly •Feed balanced meals with iron and calcium •Call the Lead Line!
