# **FHA-Insured Single-Family Mortgage Originations and Market Share Report 2009 – Q1**

# ***FHA-Insured Single-Family Mortgage Originations and Market Shares***

*By Dollar Volume and Number of Loans*

*2009- Q1*

This new report represents estimates of the role played by the FHA single-family insurance program in the broader U.S. mortgage market. FHA has insured over 36 million home loans since 1934. In the current economic environment, FHA and Ginnie Mae are providing a vital federal back-stop to permit continued credit flows to the housing market. For three quarters running, from 2008-Q3 through 2009-Q1, FHA has insured more than 20 percent of the dollar volume of home-purchase loans and more than 25 percent of the numbers of such loans. FHA's share of refinance-loan activity has also been historically high, but is also more volatile. The FHA share of refinance activity spiked to over 28 percent of dollar volumes and 32 percent of loan counts in the last quarter of 2008, but then pulled-back in 2009-Q1 as conventional market refinance volumes surged.
