

With the new RAPID Client you now have the ability to resize your screen.

However, the ability to resize your screen requires additional scrolling and toogling.

These "Outer Vertical & Horizontal Scroll Bars" control the "Inner Scroll Bars" which allow you to manipulate and see more of your screen.

This inspector has more than 18 inspections, however, without maneuvering the scroll bars he can't see them.

1. First let's move the horizontal scroll bar at the bottom to the far right.

2. And now we see the Inner Vertical Scroll Bar, which will allow you to scroll down to observe the additional inspections.

As you can see there are 2

3. When we scroll down on the inner Vertical Scroll Bar, we now see the other 17 inspections.

Field	Message

Once again, as we see on this screen, the Comment Field is only partially shown, while the Save and Reset buttons are hidden. Scrolling the vertical bar down and the horizontal bar to the right will show these hidden buttons.

The screenshot shows the RAPID software interface for '518349 - Hacienda Garden Apartments - Site'. The interface includes a top menu bar with options like 'Download', 'Sample', 'EHS', 'Unsuccessful', 'Upload', 'Archive', 'TAC', 'Transfer', 'Delete', and 'Help'. A left sidebar contains a 'Navigator' tree with 'Select Inspection' and a list of buildings. The main area is divided into 'Items' and 'Deficiencies' sections. The 'Items' section lists various site categories like 'Fencing and Gates+', 'Grounds+', 'Mailboxes and Project Signs+', 'Market Appeal+', 'Parking Lots/Driveways/Roads+', 'Play Areas and Equipment+', and 'Refuse Disposal+'. Each item has radio buttons for 'NOD', 'OD', and 'NA'. The 'Deficiencies' section is currently empty and has 'Expand', 'Collapse', and 'Delete' buttons at the bottom. A blue box highlights the vertical scroll bars for both the 'Items' and 'Deficiencies' sections. A text box at the bottom right explains that these scroll bars are not side-by-side and must be moved together to view or add more deficiencies.

Here on the Site screen we see unlike other screens, the vertical scroll bars are not side by side, however, in order to view and/or add more deficiencies you will need to move both scroll bars.

Record Area Measurements

Message(s)

Field	Message

Review Mode

Having moved the scroll bars we now see additional deficiencies as well as the Record Area Measurement button.

Following is a screen shot of an inspector's tablet prior to an inspection. As you can see most of the screen is taken up by the RAPID application. However if you click on the square (see the enlarged box) in the upper right hand corner, you can minimize and resize the screen. This can also be accomplished by taking your cursor and dragging the edges of the application (the area highlighted by the red box) to a smaller size.

Now that we have resized the screen, we can see more of the desktop and icons like the keyboard.

Following is a screen shot of how the RAPID application will look on your DCD if you resize the screen utilizing the resolution function. As you can see the image takes over the entire screen, as such, attempting to resize your screen in this manner is not advisable.

Here is another example of how resizing your screen with the resolution functionality will limit your ability, even while manipulating the scroll bars, to see your entire screen. With the screen resolution at its lowest setting, the user is only able to see 2 of the 3 options (the “NA” option can’t be seen). More importantly, usage of the horizontal scroll bar will not resolve this issue.

To ensure you have the resolution set at a preference to account for your eyesight as well as usage of the RAPID application, please:

1. Right-click on the desktop and select “Personalize”
2. Click on “Display” in the lower right-hand corner
3. On the left-hand side, click on “Adjust Resolution” – increase the size until you can see those missing buttons (screen shot below)
