

## 7. TESTING CONCLUSIONS

The goal of the current testing cycle was to ensure that:

- The revised deficiency definitions and severity reclassifications were properly transferred to the inspection software in the DCD (data collection device).

**Testing Conclusion: The protocol and software functioned as designed;**

- The software and scoring algorithms properly reflect the amended protocol.

**Testing Conclusion: The protocol and software functioned as designed;**

- The revised deficiency definitions reflect an accurate and fair inspection protocol.

**Testing Conclusion: The revisions have increased the objectivity and clarity of the definitions ;**

- Demonstrate objective language which facilitates consistent deficiency definitions.

**Testing Conclusion: The revisions have increased the objectivity and clarity of the definitions.**

In general, the Industry Observers felt that the protocol changes created a fair and accurate assessment system.
